**BUDGET JUSTIFICATION FOR PROGRAM ELEMENTS OF  
THE DEPARTMENT OF THE AIR FORCE RESEARCH AND DEVELOPMENT PROGRAM  
FY 1997 BUDGET ESTIMATES  
MARCH 1996**

**INTRODUCTION AND EXPLANATION OF CONTENTS**

1. **GENERAL:** This document has been prepared to provide information on the United States Air Force (USAF) Research, Development, Test and Evaluation (RDT&E) program to Congressional committees during the hearings on the Fiscal Year 1997 Budget Estimates. This information is in addition to the testimony given by DoD witnesses.
  - a. Exhibits R-2 and R-3 provide narrative information for all RDT&E program elements and projects within the USAF FY97 RDT&E program except those listed in Vol III. The formats and contents of this document are in accordance with the guidelines and requirement of the Congressional committees insofar as possible.
  - b. The "Other Program Funding Summary" portion of the R-2 includes, in addition to RDT&E funds, Procurement funds and quantities, Military Construction appropriation funds on specific development programs, Operations and Maintenance appropriation funds where they are essential to the development effort described, and where appropriate, Department of Energy (DoE) costs.
  - c. There are no FY97 "Facilities Exhibits" that contain information on major improvement to and construction of government owned facilities funded by RDT&E.
- 2: **CLASSIFICATION:** All R-2 and R-3 exhibits contained in Volumes I and II are UNCLASSIFIED. Classified R-2 and R-3 exhibits are now contained in Volume III. Classified pages bear the appropriate security classification and classified data is identified by use of brackets [ ]. A list of R-2 and R-3 exhibits not included in this submission (due to the level of security classification and necessity of special security clearances) is located in Vol III.
3. **COMPARISON OF FISCAL YEARS 1996 AND 1997 DATA.** A direct comparison of Fiscal Years 1996 and 1997 data shown in this document with corresponding data in the Descriptive Summaries dated February 1995 will reveal differences. The table below highlights the relationship of the FY97 budget structure to the FY96 Budget approved by Congress:

UNCLASSIFIED

UNCLASSIFIED

PE	TITLE	REMARKS
0101113F	B-52 Squadrons	Project 4493 is FY97 New Start.
0102412F	North Warning System (NWS)	Project 2710 completed in FY96.
0207129F	F-111 Squadrons	Project 3079 completed in FY96.
0207136F	Manned Destructive Suppression	Project 2671 is FY96 New Start. Project 4375 terminated in FY96. Project 4516 is FY96 Congressional add.
0207217F	Podded Reconnaissance System	Project 3652 is FY97 New Start.
0207268F	Aircraft Engine Component Improvement Program	New PE. FY96 and prior effort funded in PE 0604268F.
0207320F	Sensor Fused Weapon (SFW)	Project New Start in FY96 for Preplanned Product Improvement. FY 96 reclassification from PE 0604604F, project 1016 is pending.
0207325F	Joint Air-to-Surface Standoff Missile (JASSM)	New Start in FY96
0207431F	Combat Air Intelligence System Activities	New Start in FY97.
0207590F	Seek Eagle	Project 2784 transferred from PE 0604602F in FY96.
0207601F	USAF Wargaming and Simulation	Project 4474 transferred to PE 0605704, project 1010. Project 1011 is FY96 New Start
0303131F	Minimum Essential Emergency Communications	Transfers to project 4521 from PE 0603851, project 1024;

UNCLASSIFIED

0303144F	Electromagnetic Compatibility Analysis Center	PE 0604851F, project 13C4; PE 0101213F; and PE 0303131F, project 2832. Project 4521 (DIRECT) funded in project 2832 in FY96 and prior.
0303152F	World-Wide Military Command and Control Systems	FY96 funding transferred from DISA for Joint Spectrum Center. Program returned to Air Force budget in FY97.
0303601F	Milstar Satellite Communications System (SPACE)	Project 4485 was FY95 New Start. FY97 is first budget submission.
0303606F	UHF Satellite Communications	Project 2932 transferred from PE 0303606F in FY97 to project 2487.
0305145F	Arms Control Implementation	Project 2932 effort and resources transferred to PE 0303601F, project 2487 in FY97.
0305164F	NAVSTAR Global Positioning System -- User Equip	Project 4190 completed in FY96. Project 4520 is FY97 New Start.
0305176F	Combat Survivor Evader Locator	Project 3028 effort related to Combat Survivor Evader Locator transferred to PE 0305176F.
0305906F	NCMC-TW/AA Systems	New PE in FY96. Project effort moved from PE 35164F, project 3028
0305910F	SPACETRACK (SPACE)	Project 4409 was FY95 New Start. FY97 is first budget submission for the project.
		Project 4239 completed FY96. Project 4241 is FY96 Congressional add.

UNCLASSIFIED

0308610F	Information Management Automation Program	New Start in FY96 . Congress transferred funds from Operations and Maintenance.
0401119F	C-5 Airlift Squadrons	Project 4523 is FY96 New Start. Projects 4377 and 4495 are FY97 New Starts.
0401130F	C-17 Aircraft	Effort and resources transferred from PE 0604231F to project 2569 in FY97. Included jointly on PE 0604231F descriptive summary.
0401214F	Air Cargo Materiel Handling	New Start in FY97. Projects 5120 and 5150 initiated for effort transferred from PE 0604704F, project 3852.
0401218F	KC-135s	Project 4403 is FY97 New Start.
0601102F	Defense Research Sciences	Starting in FY96, project 06SR funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.
0602102F	Materials	Starting in FY96, project 06ML funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.
0602201F	Aerospace Flight Dynamics	Starting in FY96, project 06FS funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.
0602202F	Armstrong Lab Exploratory Development	In FY96, technical projects/funding from PEs 0602205F and 0602206F were transferred to PE 0602202F, projects 1121, 6302, 7231, 7719, and 7930. Projects in source PEs were eliminated.

UNCLASSIFIED

UNCLASSIFIED

Starting in FY96, project 06MD funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.

0602203F Aerospace Propulsion

Starting in FY96, project 06PP funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.

0602204F Aerospace Avionics

Starting in FY96, project 06AA funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.

0602601F Phillips Lab Exploratory Development

Starting in FY96, project 06WL funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.

0602602F Conventional Munitions

Starting in FY96, project 06AL funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project. Project 2567 funding for included in project 2502.

0602702F Command Control and Communications

Starting in FY96, project 06RA funding is eliminated. Infrastructure costs and civilian salaries have been transferred to each technical project.

0603108F Integrated Data Systems

FY95 New Start. FY96 Congressional add in PE 0603728F. FY97 is first budget submission.

0603205F Flight Vehicle Technology

Effort transferred from project 2508 to project 2978.

UNCLASSIFIED

# UNCLASSIFIED

06032238F	Global Surveillance and Communication Technology	Effort transferred from project 4217 to project 4216.
0603401F	Advanced Spacecraft Technology	Project 0003 is FY96 Congressional add.
0603432F	Polar Adjunct (SPACE)	New Start in FY95. FY97 is first budget submission.
0603771F	Industrial Preparedness Manufacturing Technology	Transferred to PE 0708011F in FY96.
0603790F	NATO Research and Development	New Start in FY97. Transfer to Project NATO from PE 0603790D.
0603851F	Intercontinental Ballistic Missile -- Dem/Val	Effort in project 1024 related to DIRECT transferred to PE 0303131F, project 4521.
0603854F	Global Broadcast Service (GBS)	New Start in FY96
0603855F	Space Architect Office	New Start in FY96
0604201F	Aircraft Avionics Equipment Development	Project 4017 terminated in FY96.
0604231F	C-17 Program	Transferring to PE 0401130F in FY97. Included jointly on descriptive summary with PE 0401130F.
0604249F	Night/Precision Attack	Project 2693 terminated in FY96.
0604268F	Aircraft Engine Component Improvement Program	Transferred to PE 0207268F in FY97.
0604270F	EW Development	Project 3945 is FY97 New Start to combine effort from multiple formerly classified programs.
0604441F	Space Based Infrared Architecture -- EMD (SPACE)	Project 0002 completed in FY96.

UNCLASSIFIED

UNCLASSIFIED

0604602F	Armament/Ordnance Development	Project 2784 transferred to PE 0207590F in FY96.
0604604F	Submunitions	Project 1016 will be reclassified to PE 0207320F in FY96.
0604704F	Common Support Equip Dev	Project 2479 completed in FY96. Project 3852 transferred to PE 0401214F, projects 5120 and 5150 in FY97.
0604706F	Life Support Systems	Project 3812 is FY96 New Start.
0604740F	Computer Resource Technology Transition	Project 2524 completed in FY96.
0604851F	Intercontinental Ballistic Missile -- EMD	Project 13C4 created in FY97 to consolidate related efforts. The portion related to DIRECT transferred to PE 0303131F, project 4521. Project 133B completed in FY96.
0605704F	Theater Air Defense BMC4I	New Start in FY96. Funds transferred to project 1010 from PE 0207601F, project 4474.
0605708F	Navigation/Radar/Sled Track Test Support	FY96 Congressional add transferred to PE 0604759, project 2904.
0708011F	Industrial Preparedness	Transferred from PE 603771F in FY96.
1001018F	NATO Joint STARS	Project 0002 initiated for FY95 and FY96 based on Congressional direction.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)										DATE	March 1996
BUDGET ACTIVITY		PE NUMBER AND TITLE									
5 - Engineering and Manufacturing Development		0604321F Combat Intelligence System									
PROJECT NO. AND NAME		2758 Combat Intelligence System									
		COST (\$ In Thousands)	FY 1995 Actual	1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
2758	Combat Intelligence System		8,313	3,617	1,943	1,625	995	1,024	1,038	0	TBD
(U) Note: AF will request reclassification of RDT&E funds in PE 0207431F.											
(U) A. <u>Mission Description and Budget Item Justification</u>											
(U) Combat Intelligence System (CIS) is the single, standard Air Force intelligence automation system optimizing both component and unit-level intelligence functions to provide warfighters with the most accurate and timely intelligence data available. CIS is the core capability for automating the receipt, correlation, and dissemination of intelligence information to a variety of intelligence and operational systems supporting combat planning and execution. It provides an automated capability at the component and unit levels to rapidly receive and process All-Source intelligence data to support Contingency Theater Automated Planning System (CTAPS) as the CIS builds and maintains in-theater situational awareness while deploying to the theater and provides indications and warning (I&W) support upon arrival. CIS provides the capability to receive all source intelligence near-real-time from national, theater, tactical reconnaissance, and intelligence functions. CIS is electronically interoperable and compatible with other intelligence systems to provide an integrated system capable of intelligence support to warfighters, decision makers, battle planners and mission planners.											
(U) The category of research being performed in this program element is Engineering and Manufacturing Development because it is developing new and upgrading current capability as the intelligence segment to Theater Battle Management Core Systems (TBMCS)											
(U) Acquisition Approach: Full and open competition leading to a cost plus award fee contract.											
(U)	FY 1995										
-	(U)	\$1,575	Implement Special Compartmented Information (SCI) level correlation capability and begin to enhance capability.								
-	(U)	\$4,688	Continue integrating upgrades to CIS including mapping, imagery, multimedia, and air/ground situations.								
-	(U)	\$2,050	Begin CIS software development under TBMCS.								
-	(U)	\$8,313	Total								
(U)	FY 1996										
-	(U)	\$ 588	Complete SCI level correlation enhancements.								
-	(U)	\$2,761	Continue CIS software development under TBMCS to include targeting, damage assessment, and mission reporting.

0002 Miniature Sensor Technology Integration (MSTI)			15,300	9,098	0	0	0	0	0	0	24,398

**(U) A. Mission Description and Budget Item Justification**

(U) The purpose is to develop a system to provide increased performance to meet requirements in US Space Command's Capstone Requirements Document. The system's primary mission is to provide initial warning of a ballistic missile attack on the US, its deployed forces or its allies. The Space-Based InfraRed System (SBIRS) will incorporate new technologies that would enhance detection, improve reporting of ICBM, SLBM and tactical ballistic missiles, and provide critical mid-course tracking and discrimination data for national and theater missile defense. The system will consist of satellites in Geosynchronous Orbits (GEO), Highly Elliptical Orbits (HEO) and Low Earth Orbits (LEO) and an integrated, centralized ground station serving all space elements of the SBIRS system, as well as the Defense Support Program (DSP). This Program Element funds SBIRS Engineering and Manufacturing Development (EMD) activities, and is therefore assigned to Budget Activity Research Category Engineering and Manufacturing Development. Funding is also provided in FY95 and FY96 for the Miniature Sensor Technology Integration (MSTI) and Cobra Brass (CB) programs. Funding for the SBIRS program is also provided by PE #603441F and PE #305915F.

**(U) Acquisition Strategy:**

(U) The SBIRS program is a lead program for acquisition streamlining. Program documentation has been consolidated into a single document, the Single Acquisition and Management Plan (SAMP). The pre-EMD contracts were competed in a full and open competition. Two contracts were awarded to Lockheed/Loral/Aerojet and Hughes/TRW for the pre-EMD phase, and a downselect to a single contractor is planned for the EMD phase.

(U) FY 1996		
- (U) \$60,000	Milstar I	
- (U)	Launched and performed on-orbit checkout of Satellite 2.	
- (U)	Continue to support on-orbit operations for Satellite 1.	
- (U)	Start Milstar I Phase II IOT&E.	
- (U)	Implement ECPs as needed based on operational requirement.	
- (U)	Develop and implement modifications to SMCS to enhance mission control operations.	
- (U)	Continue contractor support for MCS software sustainment for mission planning and satellite operations.	
- (U)	Develop and field operator training equipment.	
- (U) \$431,469	Milstar II	
- (U)	Complete MDR payload manufacturing on Satellite 3M, and start MDR integration and test on Satellite 3M.	
- (U)	Start MDR payload manufacturing for Satellite 4.	
- (U)	Start and complete bus integration and test for Satellite 3M.	
- (U)	Continue bus component manufacturing for Satellite 4.	
- (U)	Complete LDR integration and test on Satellite 3M, and start LDR integration and test on Satellite 4.	
- (U)	Complete LDR payload manufacturing on Satellite 4.	
- (U)	Continue LDR unit build, MDR payload manufacturing, and bus component manufacturing for Satellites 5 and 6.	
- (U)	Continue Milstar II upgrade of MCS software for mission planning.	
- (U) \$50,400	Other Government Costs	
- (U) \$541,869	Total	
(U) FY 1997		
- (U) \$56,500	Milstar I	
- (U)	Continue to support on-orbit operations for Satellites 1 and 2.	
- (U)	Complete Milstar I Phase II IOT&E.	
- (U)	Implement ECPs as needed based on operational requirement.	
- (U)	Continue to implement modifications to MCS to enhance mission control operations.	
- (U)	Transition to organic support for MCS software sustainment for mission planning and satellite operations.	
- (U)	Develop and field operator training equipment.	
- (U) \$594,578	Milstar II

Test and Evaluation Organizations

None.

Note: Due to the overrun on the Milstar I contract, an Over Target Baseline (OTB) was established in Jan 91 to provide a credible cost performance baseline for the remaining contractual effort. The EAC reflects the unclassified cost of remaining work scheduled after the Jan 91 rebaseline. The total program value includes all unclassified prior funding (approx \$4B in FY82 - 92), all unclassified fees & incentives, and ECPs not yet definitized.

March 1996

BUDGET ACTIVITY

PE NUMBER AND TITLE

5 - Engineering and Manufacturing Development

0604600F Munitions Dispenser Development

PROJECT NO. AND NAME

1015 Wind Corrected Munitions Dispenser Kit

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1015 Wind Corrected Munitions Dispenser Kit	26,318	50,088	56,229	18,228	7,784	0	0	0	158,647

(U) A. Mission Description and Budget Item Justification

This PE develops a guidance kit for the CBU-87/B, CBU-89/B, and the CBU-97/B dispensers that provide inertial navigation to correct for the effects of wind transients and ballistic errors caused by wind when these munitions are released from medium to high altitudes. WCMD Kit fitted weapons will improve effectiveness of both bombers and fighters and significantly contribute to Air Force war fighting capabilities in two nearly simultaneous Major Regional Conflicts (MRC). WCMD Kit fitted CBU-97's dropped from bombers are key to stopping enemy armored forces in the second MRC. A full and open competition in FY 95 led to dual awards for a competitive development effort that includes a competitive fly-off and also maintains the option for competition in production. This is funded in Engineering and Manufacturing Development because this program is developing a weapon system.

## (U) FY 1995 (\$ in Thousands):

(U) (U) \$16,446 Awarded EMD dual contracts for Test Hardware Design and Fabrication  
 (U) (U) \$500 Conducted government test  
 (U) (U) \$2,811 Program management support; includes travel, program office supplies and equipment, training, and technical engineering support  
 (U) (U) \$2,906 Provided other government support, GFE  
 (U) (U) \$3,655 Aircraft Integration  
 (U) (U) \$26,318 Total

## (U) FY 1996 (\$ in Thousands):

(U) (U) \$24,323 Continue dual EMD contracts for test hardware fabrication and aircraft integration  
 (U) (U) \$3,829 Program management support; includes travel, program office supplies and equipment, training, and technical engineering support  
 (U) (U) \$1,400 Conduct flight/ground tests  
 (U) (U) \$1,536 Provide other government support, GFE  
 (U) (U) \$15,400 Continue aircraft integration  
 (U) (U) \$3,600 Development of Common Munitions Built-In-Test (BIT)/ Reprogramming Equipment (CMBRE)

(U) A. Mission Description and Budget Item Justification

The Armament Standardization/Control/Munitions Material Handling Equipment (MMHE), Project 2784, and the Container Design Retrieval System (CDRS), Project 5613, satisfy several USAF and tri-service requirements for standardization of armament and support equipment and eliminate unnecessary duplication of MMHE and containers. (Funding for Project 2784 for FY96 and beyond was transferred to PE 27590F, SEEK EAGLE.) The Bombs and Fuzes Project 3133 satisfies TAF ROC 323-75, Proximity Fuzes, dated 2 Sep 75; TAF SON 305-85, Hardened Target Munitions, dated 14 Oct 86; OSD letter requirement for a common bomb fuze, dated 11 Apr 80; SAC message 041901Z Feb 87, M117 High Drag Capability(s); Joint Mission Need Statement (MNS) TAF 401-91 for Adverse Weather Strike Capability, dated 4 Nov 91; and CAF MNS 314-90 for the Advanced Fuze Family, dated 13 May 93. This project funds development of a specific fuze type for air-to-ground munitions. The RDT&E Research Category/Budget Activity is Engineering and Manufacturing Development because the projects support the EMD development phase of several munitions related items and functions. This program is funded in budget activity 5 - Engineering and Manufacturing Development because the projects support the EMD development phase of several munitions related items and functions.

5613 Container Design Retrieval System

COST (\$ in Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
5613	Container Design Retrieval System	203	137	133	137	137	142	140	Continuing	TBD

(U) A. Mission Description and Budget Item Justification

Containers: This project funds the operation of the tri-service Container Design Retrieval System (CDRS). This system includes the maintenance of a container database to preclude proliferation and duplication of munitions containers. It also supports organic container design, prototyping, and testing capabilities. This project's efforts are limited to the study, design, and development of container systems. Any procurement will be performed and funded by the applicable weapons system project.

## (U) FY 1995 (\$ in Thousands):

- (U) \$43 Initiate/continue/complete design/development of various CDRS projects including containers for the AGM-142 components, the Multi-Spectral Aircraft Decoy, the AMRAAM BIT modification, Special Projects, and the JSOW (AF).
- (U) \$30 Provide container design expertise, management, and technical support to ongoing programs under contract development or production such as JDAM, JSOW (Navy), AGM-130, DSU-33 A/B, Joint Programmable Fuze, and MILSTAR.
- (U) \$130 Manage and operate the CDRS and data base,
- (U) \$203 Total

## (U) FY 1996 (\$ in Thousands):

- (U) \$5 Initiate/continue/complete design/development of various CDRS projects, including containers and fixtures for AGM-142 components, Multi-Spectral Aircraft Decoy, Mobile Aircraft Arresting System, and Special Projects.
- (U) \$5 Provide container design expertise, management, and technical support to programs, such as AIM-9X, AMRAAM, JASSM, AGM-142, JDAM, AGM-130, DSU-33 A/B, Wind Corrected Munitions Dispenser (WCMD), JPF, and MILSTAR.
- (U) \$127 Manage and operate the CDRS data base and support service.
- (U) \$137 Total

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>Project 3166 is a joint US Air Force/US Army program which evaluates developmental smart munitions and related emerging technology with applications against mobile ground vehicle targets and Theater Air Defense units by determining performance against actual foreign targets in realistic environments and in the presence of countermeasures. Data gathered is used to meet developmental decision points requiring highly reliable, realistic performance data. The project is a major focal point for joint Air Force and Army target signature collection and dissemination for development and exploitation purposes. This PE provides support for smart munitions test and evaluation (T&amp;E) activities including T&amp;E support for programs in engineering and manufacturing development. This project is funded in BA 5 because it is a continuing RDT&amp;E activity supporting mostly acquisition programs in Engineering and Manufacturing Development.</p>

<p>The FY1997 PB has no funds programmed for SFW P3I in FY 1997 and FY1998. However, the Air Force will identify sources for SFW P3I funds in these years. The SFW P3I will need \$19.1 million in FY1997 and \$19.9 in FY1998 to complete the SFW P3I program. The planned program for FY1997 is as follows:</p> <table border="0"> <tr> <td>(U) FY 1997 (\$ in Thousands):</td> <td></td> </tr> <tr> <td>- (U) \$16,300</td> <td>Continue EMD contract for design, development, and test of SFW P3I</td> </tr> <tr> <td>- (U) \$1,200</td> <td>Conduct government tests</td> </tr> <tr> <td>- (U) \$100</td> <td>Other government support, GFE</td> </tr> <tr> <td>- (U) \$1,500</td> <td>Program management support, includes travel, program office supplies and equipment, training and technical engineering support</td> </tr> <tr> <td>- (U) \$19,100</td> <td>Total</td> </tr> </table>			(U) FY 1997 (\$ in Thousands):		- (U) \$16,300	Continue EMD contract for design, development, and test of SFW P3I	- (U) \$1,200	Conduct government tests	- (U) \$100	Other government support, GFE	- (U) \$1,500	Program management support, includes travel, program office supplies and equipment, training and technical engineering support	- (U) \$19,100	Total

<p>(U) Change Summary Explanation:</p> <p>Funding: In FY95, \$1,429,000 was reprogrammed to PE 0207320F (Sensor Fuzed Weapon) and \$35,000 remained in PE 0604604F, which we plan to reprogram to PE 0207320F. These funds are for SFW production support and belong in the SFW PE. Congress added funds in FY96 to start SFW P3I. Of the above threshold reprogramming in FY96, \$103,000 is for the Bosnia bill and \$105,000 is for F-16s for Jordan.</p> <p>Schedule: None.</p> <p>Technical: None.</p>

(U) A. Mission Description and Budget Item Justification  
 This program is in budget activity 5 - Research, Development, Test and Evaluation because it supports Engineering and Manufacturing Development (EMD) of selected Air Base Systems (ABS). Air Base Operability (ABO) integrates capabilities to rapidly deploy, and defend and sustain air base operations, which are prerequisites to establishing air superiority. ABS provide beddown for aircraft, support equipment, and forces at both main operating bases and contingency operating locations, which may have only a runway and a water source. The need for ABS was dramatically illustrated during DESERT SHIELD/DESERT STORM/PROVIDE COMFORT, and other global contingencies over the past 5 years. Lighter-weight rapidly deployable facilities and equipment have become essential in supporting contingencies for security, base defense, relief efforts, and special operations throughout the world. ABS capabilities being developed include: joint Service (Army-led) test, evaluation and acquisition of protective vehicles to be used by Air Force security police, civil engineers, and explosive ordnance disposal technicians for air base defense and reconnaissance missions; a deployable system to repair/reinforce runways; a deployable fire protection system to detect and extinguish aircraft, Petroleum, Oil, and Lubricants, and structural fires at remote locations; and camouflage, concealment and deception systems to protect critical mission resources. Because of reduced funding and support for ABO in FY97 and beyond, we have consolidated all efforts into one project, 2895. All programs/project efforts continue in the Air Base Operability Project; no efforts were terminated.

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
3890 Joint Direct Attack Munitions	65,553	85,916	38,636	34,717	24,567	1,459	1,238	1,800	337,340

(U) A. Mission Description and Budget Item Justification

Desert Storm confirmed the need for a more accurate weapon delivery capability in adverse weather conditions from medium/high altitudes. Failure to satisfy this requirement will allow the enemy to continue to take advantage of the sanctuary of weather and/or prevent US air power from prosecuting a conflict on its terms. JDAM is an Air Force and Navy munitions program to correct these shortfalls, with the Air Force as the executive service. JDAM will upgrade the existing inventory of general purpose bombs (Mk-84, BLU-109, and Mk-83/BLU-110) by integrating them with a guidance kit consisting of a global positioning system aided inertial navigation system (INS/GPS). JDAM will provide an accurate (13 meters) adverse weather capability. JDAM will initially be integrated with the B-52H, B-2, B-1B and F/A-18C/D aircraft with follow-on integration on the F-16, F-15E, F-22, A/V-8B and other aircraft. The JDAM Product Improvement Program (PIP) will field improvements to the JDAM system with emphasis on improving accuracy beyond 13 meters as well as JDAM system robustness. JDAM development is a two-phased Engineering and Manufacturing Development (EMD) effort. EMD Phase 1 emphasized competitive design and manufacturing processes. This phase completed 10 Oct 95. EMD Phase II emphasizes full scale hardware build and flight test to verify system performance and will support OT&E. This program is funded in Budget Activity 5, EMD, because of the focus on devising an affordable design and manufacturing process.

## (U) FY 1995 (\$ in Thousands):

- (U) \$24,050	Completed EMD Phase 1 prime contractors' development activities, including fabrication and testing engineering evaluation units, instrumented measurement vehicles, separation test vehicles and guided test vehicles
- (U) \$33,202	Conducted Program Office Mission/Engineering Support tasks including aircraft interface requirements definition, tail kit design requirements definition, aircraft safe separation wind tunnel tests, and flight tests of contractor designs
- (U) \$8,301	Continued Product Improvement Program (PIP) planning efforts to include Differential GPS (DGPS), and Mission Planning improvements
- (U) \$65,553	Total

## (U) FY 1996 (\$ in Thousands):

- (U) \$66,606	Initiated EMD prime contractor activities to fabricate development and operational test hardware and software, final definition and proof of production processes, and engineering support of aircraft integration and test activities
- (U) \$8,150	Continued Program Office Mission/Engineering Support tasks to define and coordinate the program activities of the prime contractor and various government development and test organizations

BUDGET ACTIVITY

PE NUMBER AND TITLE

5 - Engineering and Manufacturing Development

0604618F Joint Direct Attack Munition

PROJECT NO. AND NAME

3890 Joint Direct Attack Munitions

FY96: Reductions for Small Business Innovative Research, General Congressional Reductions, \$1.567M reprogramming for F-16s to Jordan, and \$.947M reprogramming for Bosnia operations.

FY97: The largest contributions to the \$47.271M change were a transfer of \$26M RDT&E funds to procurement to start Low Rate Initial Production (LRIP) one year earlier - see Schedule below; reduction in Product Improvement Program (PIP) funding (\$6.9M) for adapting seeker technologies to JDAM which was removed due to affordability concerns and competing budget priorities; and a \$9.0M reduction due to slower than planned program execution.

Total Costs: Reductions in cost beyond FY97 are due to the elimination of funding for the development of a terminal seeker for JDAM PIP and lower than expected EMD Phase II costs. These reductions combined with the above changes resulted in a total cost reduction of \$360M.

Schedule: Acceleration of JDAM program shifts LRIP (Lot 1) start forward nine months from Dec 97 to Apr 97 and moves MSIII (Full Rate Production Decision) ahead by 15 months from Jul 99 to Apr 98. PIP technology efforts have been deleted.

Technical: PIP efforts are now focused on improving weapons accuracy through enhancements in the baseline GPS receiver, target location error reduction, and improved guidance and control.

(U) **A. Mission Description and Budget Item Justification**  
 This program is in budget activity 5 - Engineering and Manufacturing Development (EMD), Research Category 6.4 because the majority of the funded efforts focus on preparing for an acquisition milestone III decision to initiate production. This program element supports projects and tasks that develop, test, evaluate and field improved aircraft common support equipments to meet the operational mission needs of both Global Reach and Global Power forces; which cannot be met through non-developmental item (NDI) acquisitions. Its goal is to limit proliferation; increase standardization; reduce the deployment footprint; reduce the environmental impact; and improve performance, availability, and reliability and maintainability; thereby reducing the life cycle costs. This program element also supports the development of an air transportable 60,000 (60K) pound capacity aircraft transporter loader, project #3852. Project numbers 3759 and 3852 are being transferred to other PEs. Project number 3759, Air Force Support Equipment Management, will transfer to PE 0708611F, Support Systems Development. Project number 3852, 60K Pound Capacity Aircraft Transporter Loader, will transfer to PE 0401214F, Air Cargo Materiel Handling (463L).

## (U) A. Mission Description and Budget Item Justification

Project #3759, Air Force Support Equipment Management: The Automatic Test Systems (ATS) Product Group Manager's (PGM) Product Master Plan (PMP) and ATS database and software standards effort is designed to provide the tools to track and plan the ATS direction and provide the interface with commercial software standards. The PMP will support standardization and ATS PGM long-term planning by capturing essential data on all Air Force ATS. The ATS database will include all ATS identified in the PMP and be used to interface with Integrated Weapon System Master Plans. It will provide ATS managers and users the capability to match new test requirements to existing test capabilities (Note: This project has been transferred to PE 0708611F, Support Systems Development, beginning in FY1996).

## (U) FY 1995 (\$ in Thousands):

(U) \$159 Completed development of the ATS Master Plans  
 (U) \$5 Continued ATS Product Master Plan (PMP) data maintenance  
 (U) \$243 Programmed upgrades and updates and maintained the ATS database  
 (U) \$64 Program management support  
 (U) \$471 Total

<p>(U) <b>A. Mission Description and Budget Item Justification</b>            Project #3852, 60,000 (60K) Pound Capacity Aircraft Transporter Loader: This project will develop the 60K loader to fulfill the requirement of Air Mobility Command's (AMC) Operational Requirements Document (ORD) 002-89-1. The project provides a single, unique loader to on/off load various aircraft like the C-17, C-5, C-141, C-130, C-27, KC-10, and Civil Reserve Air Fleet (CRAF) aircraft; while combining the capabilities of the 40K, wide-body elevator, and lower-lobe loaders. The 60K loader will be driven on/off of the C-17, C-5, and C-141 aircraft without shoring. The 60K loader will also be capable of meeting the US Army's requirement to move/load a type V airdrop platform weighing a full 60,000 pounds. It will be significantly more reliable with a 100 hours mean time between failure (MTBF) versus the 40K loader's 18 hours MTBF. A major reduction in deployment preparation times will be achieved; from 30 man-hours to 3 man-hours.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$25 Materials and labor for ECO testing on prototype loaders</li> <li>- (U) \$583 Provided program management support</li> <li>- (U) \$608 Total</li> </ul> <p>(U) FY 1996 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$540 Provide technical support for the Initial Operational Test and Evaluation (IOT&amp;E)</li> <li>- (U) \$80 Research ECPs</li> <li>- (U) \$498 Provide program management support</li> <li>- (U) \$1,118 Total</li> </ul> <p>(U) FY 1997 (\$ in Thousands): Not Applicable.</p>

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>This program element is devoted to Engineering and Manufacturing Development (EMD) of aircrew life support equipment. This program element is managed from pre-concept to disposal under the Integrated Weapon System Management (IWSM) single manager concept. The Life Support program provides consolidated management for the development, acquisition, production, deployment, and support of aircrew protective equipment. The aircraft subsystems enable aircrews, passengers, and ground support personnel to operate safely in combat and training environments. Equipment developed under this program are generally classified as operational environment life support systems, escape and descent systems, and survival and recovery systems. Project 3111 develops a management information system to reduce loss of aircrew lives and aircraft due to human factors. Project 3812 develops a pressure breathing anti-Gravity (G) system for F-15 and F-16 crew members to help reduce the likelihood of G-induced loss of consciousness incidents and increase pilot endurance under high-G combat conditions. The majority of the equipment has been developed through the continuing core project, Project 412A. This project provides centralized management of life support items and subsystems. They include the following: flight clothing, flight helmets, oxygen breathing equipment for aviators, anti-G coveralls, survival radios, night vision devices, active/passive noise reduction devices, parachute releases and aircraft ejection seats.</p>													
<p>(U) <b>Acquisition Strategy:</b></p> <p>Acquisition strategy is incorporated at the project level.</p>

**(U) Change Summary Explanation:**

Funding: FY95 Below Threshold Reprogramming was to initiate the deployment of COMBAT EDGE to F-16 units. FY96 budget year was increased to complete Follow-On Test and Evaluation (FOT&E) on mask improvements and to complete the deployment of COMBAT EDGE to F-15 units.

Schedule: Integration tests on mask improvements (comfort and design) moved from FY95 to the first quarter of FY96 due to defective test items delivered by the contractor for FOT&E on the concept 1 mask improvements. The initiation in the deployment of COMBAT EDGE to F-15 units was rescheduled to begin in the first quarter of 1996.

412A Life Support Systems									

(U) A. Mission Description and Budget Item Justification

This project provides for Engineering, Manufacturing, and Development (EMD) of life support equipment and subsystems to satisfy operational command requirements for improved life support equipment. This project also maximizes life support items and subsystems such as the following: flight clothing, flight helmets, oxygen breathing equipment for aviators, anti-G coveralls, survival radios, night vision devices, active/passive noise reduction devices, parachute releases, and aircraft ejection seats. Program management support includes tasks to assess deficiencies of currently fielded equipment. It also aids in transitions of new technology into EMD and to support all current life support projects. Life Support Systems top three major contractors are ITT Electro-Optical Products Division, Bose Corporation, and Conax Florida Corp. Life Support efforts result from full and open competition among qualified vendors to select a single primary source for EMD and follow-on production.

## (U) FY 1995

(U) (U) \$2,975 Received Night Vision System (NVS) Developmental Testing and Evaluation (DT&E) units  
 - (U) \$594 Initiated NVS government conducted DT&E  
 - (U) NSP Provided technical support for Universal Water Activated Release System (UWARS) production contract.  
 - (U) NSP Initiated Active Noise Reduction (ANR) government DT&E. (\$643K Air Force Special Operations Command (AFSOC) funded)  
 - (U) NSP Completed UWARS government DT&E  
 - (U) NSP Completed UWARS Initial Operational Test & Evaluation (IOT&E). (Funded by PE64609F, R&M Maturation/Tech Insertion Program)  
 - (U) \$579 Program Management Support and Travel  
 - (U) \$4,148 Total

(U) Change Summary Explanation:		
Funding: FY96 and FY97 NVS program re-structure incorporated an improved NVS optical design and combined DT&E with OT&E, thereby reducing testing costs and maintaining the scheduled Initial Operating Capability (IOC).		
Schedule: Re-design of NVS optics resulted in later delivery of test assets; however, combination of DT&E and OT&E cut test costs and test schedule, preserving net schedule for IOC.		
Technical: NVS optical design incorporates breakout technology and is not driven by any failure in the previous design.

**(U) A. Mission Description and Budget Item Justification**

This program funds the development, testing and evaluation of materials, equipment and procedures in four separate areas: a) Facilities Engineering improves the operational effectiveness, survivability, durability, and longevity of air base pavements, buildings and utilities; the overall objective is to provide an infrastructure that effectively supports the Air Force mission, contributes to high sortie rates, supports forward projection of air power, is less susceptible to damage from enemy actions or natural disasters, and is more rapidly returned to service if damaged. b) Fire Fighting Suppression and Rescue develops new concepts and technology applications to increase fire fighting support of combat operations, to improve base recovery after attack capabilities, and to reduce fire risks to personnel and resources. c) Tactical Shelters is the USAF portion of a tri service effort to develop standardized, low maintenance, survivable shelters and shelter accessories that are easily mobilized and compatible with air, sea and land transport systems. These products will effectively support high mobility aircraft support, command and control, communications, medical, and data processing units for the tactical and strategic forces. d) Environmental Quality ensures Air Force compliance with existing laws, executive orders, and Air Force policies by developing technologies to identify, reduce, and eliminate pollutant sources, identify and dispose of hazardous waste, conduct remediation, and mitigate the effects wastes and pollutants. This project develops equipment, materials, and processes in support of the Air Force environmental program. Environmental work performed under this program element is Engineering and Manufacturing Development because it takes emerging technologies and develops them for Air Force use.

(U) A. Mission Description and Budget Item Justification  
 Develops equipment, materials, and processes in support of the Air Force environmental program including pollution prevention, compliance, restoration, and conservation. The focus is on technologies to reduce and eliminate pollutant sources, provide cost effective waste disposal, conduct remediation, and mitigate the effects of wastes and pollutants.

(U) FY 1995 (\$ in Thousands):  
 (U) \$200 Compliance - Highly Energetic Material Program.  
 - (U) Review and comment on documentation to provide at completion of Lab transition.  
 - (U) Participate in pilot demonstration.  
 - (U) Prepare to execute program pending full funding of effort  
 - (U) Review and develop program proposals to meet Air Force needs identified in the Air Force ESOH Technology Needs Survey.  
 - (U) Prepare for technology transition and program execution.  
 Remediation - SCAPS.  
 - (U) Continue to manage ARPA program.  
 - (U) Represent AF at Tri-Service meetings.  
 - (U) Inform AF users of availability of services and capabilities.  
 Pollution Prevention.  
 - (U) Define scope and effort involved in supporting AF effort to reduce the use of ODCs and HAZMATS.  
 - (U) Develop and submit program proposals to NDCEE and ESTCP.  
 - (U) Continue execution of replacement identification program for engines at NDCEE.  
 - (U) Review and develop program proposals to meet AF needs identified in AF ESOH Technical Needs Survey.

<p>(U) <u>A. Mission Description and Budget Item Justification</u></p> <p>The Joint Standoff Weapon (JSOW) is an air-to-ground weapon designed to attack a variety of targets during day, night, and adverse weather conditions. JSOW will enhance aircraft survivability as compared to current interdiction weapon systems by providing the capability for launch aircraft to standoff outside the range of point defenses. The JSOW launch-and-leave capability will allow several target kills per aircraft sortie. The program provides for development and test of a dispenser design for the JSOW/BLU-108 variant which employs a BLU-108/B submunition payload. Integration of the JSOW Baseline weapon (BLU-97 Combined Effects Munition variant) and the JSOW/BLU-108 with the F-16C/D aircraft is also included. Future integration is planned with the B-1B, B-52, and the F-15E. The program also includes the development of Common Munitions BIT (Built-In Test), Reprogramming Equipment (CMBRE) software, a tester for JSOW, Joint Direct Attack Munitions (JDAM), Wind Corrected Munitions Dispenser (WCMD), and future smart weapons. The RDT&amp;E Research Category/Budget Activity is Engineering and Manufacturing Development - the phase of the program following a successful Milestone II (Acquisition Decision Memorandum dated 26 April 1995).</p> <p>(U) <u>FY 1995</u></p> <ul style="list-style-type: none"> <li>- (U) \$ 10,791 - Plan, design and produce test vehicles</li> <li>- (U) \$ 1,216 - Plan, design and initiate flight testing</li> <li>- (U) \$ 8,900 - Start development of the Operational Flight Program (OFP) tape and program office flight test support for F-16</li> <li>- (U) \$ 13,298 - Design, develop, and test Air Force Mission Support System (AFMSS) module; perform Integrated Logistics System (ILS) tasks; participate in Critical Design Review (CDR)</li> <li>- (U) \$ 4,402 - Engineering support, program office support</li> <li>- (U) \$ 5,000 - Plan, design and produce MIL-STD-1760 carriage store</li> <li>- (U) \$ 501 - Conduct Survivability Analysis</li> <li>- (U) \$ 10,698 - Design BLU-108 dispenser; perform weapon pattern optimization; conduct Preliminary Design Review</li> <li>- (U) \$ 54,805 Total</li> </ul>

5 - Engineering and Manufacturing Development		0604735F Combat Training Ranges									
PROJECT NO. AND NAME											
2286 Combat Training Range Equipment											
COST (\$ In Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
2286	Combat Training Range Equipment	13,664	9,739	23,018	20,501	15,014	13,432	14,560	Continuing	TBD	
<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>This program develops the electronic, telecommunications, and instrumentation equipment/systems for training ranges worldwide. These systems provide real-time monitoring and control of aircrew air-to-air, air-to-ground, and electronic warfare training along with the ability to record events for crew debriefing and analysis. The primary developmental effort is the Nellis Air Combat Training System (NACTS) at Nellis AFB. NACTS is a Global Positioning System (GPS) based system to replace the current Red Flag Measurement and Debriefing System (RFMDS) increasing to 100 the number of instrumented participants, improving aircraft position tracking accuracy, expanding range coverage, multiplying weapons simulations and adding electronic warfare threat/aircrew interaction. The development effort involves software development to increase the number of high activity players as well as the integration and test of the training system comprised of ground equipment and aircraft pods purchased by procurement funding. This program element also funds the continued development of advanced electronic threats, aircraft/pod interfaces, software interoperability among service ranges and the encryption of range/aircraft data links. The Air Force continues to participate with the Navy-led Joint Tactical Combat Training System (JTCTS) development effort to ensure interoperability with AF ranges. JTCTS is a GPS based system to track and record aircraft, surface vessel, and submarine training operations. Procurement funding will be used for ground equipment and aircraft pods. The acquisition strategy is competitive, with cost plus contracts. This program is in budget activity 5 - Engineering and Manufacturing Development because the Combat Training Ranges (CTR) Program directly contributes to the effectiveness and survivability of US combat forces by developing range instrumentation and training systems to increase the effectiveness of the training spectrum from individual aircrew skill training to large-scale exercises.</p>

**(U) A. Mission Description and Budget Item Justification**

This program is in budget activity 5 - The goal of this program is to reduce software lifecycle costs and to improve the quality of computer systems development and support. This is the only Air Force program for transitioning software technology across the board into the USAF (rather than into a specific acquisition program). The program consists of five major projects. Project 2522 will establish the foundational elements of an effective methodology to support transitioned capability. Project 2523 will initially address a particular instantiation, namely command and control architectures, of reusable technology which are available or can be developed in the near term. Project 2524 will address the technologies/processes inherent in operating and maintaining a domain central repository of software, software algorithms, and reusable technologies. Project 3315 will provide a totally integrated capability to create, accept, retrieve and store digital (paperless) technical information for life cycle support for Air force logistics. Engineering and Manufacturing Development, because specifically, it addresses acquiring, developing, and supporting emerging computer resources.

**(U) A. Mission Description and Budget Item Justification**

This project develops, through rapid prototyping and interaction with Air Force users, a tailorable architecture for support of command and control applications. The architecture will address the components common to most command centers (e.g., message processing, display processing, user interfaces) and will focus on the migration of multilevel computer security applications/technologies into AF operations. This project is needed to mitigate development time associated with command center acquisitions so that the system is not obsolete when delivered.

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>(U) Intelligence Equipment (IE) provides continuing development and upgrades of National Air Intelligence Center (NAIC) and Air Force Information Warfare Center (AFIWC) threat analysis capabilities. IE provides NAIC and AFIWC with the tools necessary to make timely assessments of foreign weapon systems. IE develops the tools to model and assess foreign airborne and aerospace systems. Both organizations are tasked with providing detailed foreign technology intelligence information to a variety of both DOD and Non-DOD customers. In the past few years, customers' requirements have been more sophisticated, dictating more detailed and timely intelligence not only in the technology regime but also in the economic, world crisis, and political arenas. The Rome Laboratory is charged with providing new analysis capabilities and tools to meet these evolving requirements. This effort is Budget Activity 5, Engineering &amp; Manufacturing Development, because the program develops and inserts new technology into existing systems and models to keep existing systems current.</p>

## (U) A. Mission Description and Budget Item Justification

Joint Tactical Information Distribution System (JTIDS) effort provides the Army, Navy, Air Force, and Marine Theater Command and Control (C2) elements with a secure, jam-resistant, high capacity data link communications system for use in a tactical combat environment. JTIDS is the communications component of the Tactical Digital Information Link (TADIL) designated Link-16, and is synonymous with the TADIL J message standard. The JTIDS family of terminals (Class 2 and 2H for the Air Force, Navy and Marine Corps; and 2M for Army) is a joint development program which employs Time Division Multiple Access (TDMA), and spread spectrum techniques. JTIDS permits rapid and secure exchange of essential command control, and status information with all terminals in the tactical theater. Host platforms (i.e. E-3, E-8, F-15, RIVET JOINT, ABCCC, MAOC, and MCE) program and budget for JTIDS production terminals.

(U) PY 1995

- (U) 3,700

PROGRAMS: Efforts associated with Acquisition and Integration of Class 2/2H and Fighter Data Link Terminals.

-- (U) System integration and software development for E-3, E-8, F-15, RIVET JOINT, ABCCC, and MCE.

-- (U) Prepare DAB materials and procurement package

- (U) 2,100

INTEGRATION/INTEROPERABILITY: Efforts associated with Integration of terminals and insuring Link-16 operates

effectively across all platforms

-- (U) Provided support and on-site Enhanced JTIDS System Exerciser (EJSE) operators for host platform developers and integrators.

-- (U) Continued Affordability/Manufacturing Technology Demonstration (AMTD) bench tests at Eglin AFB.

- (U) 3,575

SUSTAINMENT: Efforts associated with ensuring fielded terminals are supported.

-- (U) Integrated Software Support Activity (ISSA) technical engineering software support at Warner Robins AFB

-- (U) Class 2 terminal logistics support (PRE-OP)

- (U) 1,600

TEST: Efforts associated with fielding terminals

-- (U) IOT&amp;E for MCEs, JSTARS, RIVET JOINT, Class 2M Terminal

-- (U) F-15 Operational Special Project (OSP) Complete

-- (U) Verified MIP correction and support E-8, ABCCC and MCE development efforts

-- (U) Supported AF host platform participation in joint exercises in Ballistic Missile Defense demonstrations

5 - Engineering and Manufacturing Development

0604754F Joint Tactical Information Distribution System

PROJECT NO. AND NAME

P771 JTIDS

(U) FY 1996

- (U) 1,402

**PROGRAMS:** Efforts associated with Acquisition and Integration of Class 2/2H and Fighter Data Link (FDL) terminals

- (U) Write and administer contracts for E-3, E-8, F-15, RIVET JOINT, Cobra Ball, ABCCC, MAOC, and MCE platforms.
- (U) F-15 FDL Acquisition and Integration.
  - Integration of Link-16 into F-15 C/D and F-15 E.
  - FDL System Spec Development.
  - Interface Control Document (ICD) Development
  - Test Plan Development.
- (U) Technical support to JTIDS Operations at Mountain Home AFB and Nellis AFB.
  - Command and Control (C2) Terminal Acquisition Support.
  - Determine terminal technical and configuration requirements
  - Establish delivery schedule; establish maintenance plans
  - Establish maintenance training schedules.

- (U) 1,233

**INTEGRATION:** Efforts associated with integration of terminals into the various platform

- (U) On-going integration support to AWACS, Rivet Joint, ABCCC, MAOC, MCE, JSTARS, and F-22.
- (U) Technical Improvements:
  - Technical support to AF Platforms to integrate Pre-Planned Product Improvements (P3I)
  - Assist in processing P3I;
- (U) Field Support for F-15 Operations.
  - Provide two sheltered JTIDS systems (SJSs) to Nellis AFB
  - Support flight training, exercises, and scenario development/demonstrations
  - Support Data Link Utility Evaluation through OSP and follow-on activities
  - Support F-15 Electronic Combat Identification (CID) Development Test and Engineering (DT&E) and follow-on activities.
- (U) Provide technical assistance to Boost Phase Intercept Programs.
  - High Gear Program: Testing sensor tracking of theater missile
  - Airborne Interceptor: Establish procedures for intercepting theater missile.

- (U) 1,603

**INTEROPERABILITY:** Efforts associated with ensuring Link-16 operates effectively across all host platforms.

- (U) AF platform interoperability.
  - Support Multi-Service Interoperability Tests.
  - Support All Service Combat Identification Evaluation Team (ASCIET) tests.

(U) A. Mission Description and Budget Item Justification

This program is in budget activity 5 - Engineering and Manufacturing Development, Research Category 6.4 because there is an Air Force and Army need to provide, from airborne platforms, near-real time surveillance and targeting information on moving and stationary ground targets (growth to maritime operations), slow moving rotary and fixed wing aircraft, and rotating antennas. This information would enable operational and tactical commanders to make and execute battle decisions. To meet these needs, the Air Force and Army initiated the Joint Surveillance Target Attack Radar System (Joint STARS) program with the Air Force as lead service. Joint STARS will be capable of providing target information for pairing direct attack aircraft and standoff weapons against selected targets. The system will be capable of being cued by other reconnaissance, surveillance, and target acquisition systems; able to respond rapidly to worldwide contingencies; and provide surveillance and attack information in all light and near-all-weather conditions. The operational utility of the system was effectively demonstrated by the outstanding performance of two developmental aircraft in support of combat operations during Desert Storm. In Dec 1995 two developmental aircraft (one E-8A and one E-8C) were deployed in support of Operation Joint Endeavor in Bosnia. A Defense Acquisition Board (DAB) Milestone III (Full Rate Production) is planned for 4Q FY96.

## (U) FY 1995 (\$ in Thousands):

(U) 25,906 Continued E-8C follow-on development and testing program  
 (U) 97,787 Continued Ground Support Systems (GSS), Self Defense Suite (SDS), Multi-Stage Improvement Plan (MSIP), Post Delivery Test Support (PDTS) and Crew Trainers Development  
 (U) 42,585 Continued GFE, program support, test, and other miscellaneous efforts  
 (U) 166,278 Total

## (U) FY 1996 (\$ in Thousands):

(U) 19,481 Continue E-8C follow-on development and testing program  
 (U) 42,067 Continue GSS and SDS Development  
 (U) 37,066 Continue MSIP and Crew Trainers Development  
 (U) 26,660 Complete PDTS contract and start E-8C Follow-on Test Support (FOTS) contract  
 (U) 39,728 Continue GFE, program support, test, and other miscellaneous efforts  
 (U) 165,002 Total

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>This program is in budget activity 5 - Engineering and Manufacturing Development, because it is designed to improve the interoperability of Tactical Command and Control (C2) Systems used in support of joint operations. JINTACCS supports Air Force participation with the Army, Navy and Marines, and the Joint Interoperability and Engineering Organization (JIEO) which acts as the Executive Agent. Service and agency activities are governed by Joint Chiefs of Staff (JCS) approved documentation including Technical Interface Concepts and Technical Interface Design Plans. Close liaison across each of the Service JINTACCS programs precludes duplication of efforts. Elements of the Tactical Air Control System, E-3 Airborne Warning and Control System (AWACS) and Joint Tactical Information Distribution System (JTIDS) participate in this program. The JINTACCS program, formerly Ground and Amphibious Military Operation (GAMO), is directed by JCS Memorandum 205-72, dated 1 April 1971, as modified by a Secretary of Defense memorandum, "Reorganization of the DoD Program to Achieve Interoperability of Tactical C2 Systems for GAMO," dated 2 Aug 1977. The program complies with requirements of DoD Directive 4630.5, "Compatibility, Interoperability, and Integration of Command, Control, Communications, and Intelligence (C3I) Systems," November 12, 1992, and DoD Instruction 4630.8, "Procedures for Compatibility, Interoperability, and Integration of C3I Systems," November 18, 1992. The JINTACCS program entails the compatibility and interoperability of C3 systems including tactical intelligence for joint or combined operations through the development and management of a joint architecture, requirements process, interface definitions, message text formats (MTFs), Tactical Digital Information Links (TADILs), and other combat data link standards. This includes the coordination of all combat data link and MTF testing certification and configuration management of standards efforts under one program element. This project supports the efforts to ensure C3 systems' interoperability among all the CINCs, DoD agencies, and the services. Development/certification testing is a pre-production requirement IAW DoDD 4630.5 and DoDI 4630.8.</p> <p><b>(U) FY 1995</b></p> <ul style="list-style-type: none"> <li>- (U) \$ 200 Begin Joint testing of JMI.</li> <li>- (U) \$ 50 Begin exercise participation of expanded USMTF processing Proof-of-Concept.</li> <li>- (U) \$ 25 Begin Theater Battle Management (TBM) C4I architecture development/data model development.</li> <li>- (U) \$ 190 Continue technology exchange/integration with Joint Staff GCCS project.</li> <li>- (U) \$ 70 Continue Air Force testing of the TADIL-J message standard.</li> <li>- (U) \$ 100 Continue CAF preliminary testing of TADIL-J in ABCCC and E-3.</li> <li>- (U) \$ 50 Continue review of impact of emerging DoD data element standardization on USMTF standard.</li> <li>- (U) \$ 50 Continue feasibility analysis of ADA 9X for use in object-oriented prototype development.</li> </ul>

NOTE:

- FY94 funding under PE 0101213F, Minuteman Squadrons.
- Project/program funding for FY95 does not accurately reflect adjustments to appropriated value for all projects. See individual project Program Change Summary for details/explanation.

(U) A. Mission Description and Budget Item Justification

(U) ICBM modernization efforts will extend the operational life of the Minuteman ICBM weapon system. The Rapid Execution and Combat Targeting (REACT) Program replaces unsupportable Minuteman launch control center equipment with a modern command, control, and communications system. The Guidance Replacement Program (GRP) will replace failing guidance system electronics. The Propulsion Replacement Program (PRP) will remanufacture solid fuel stages to correct age-related degradations and maintain existing weapon system reliability. The Strategic C4 (Command, Control, Communications, and Computers) Program will modernize the command, control, communications, and computer systems associated with assured force execution/termination of the ICBM forces. These efforts were defined and validated in DoD's Nuclear Posture Review. These programs are in Budget Activity/Research Activity Engineering and Manufacturing Development (EMD).

(U) Acquisition Strategy:

(U) REACT. This program covers the production and installation of the REACT Class V modification. The contractual vehicle, a fixed-price incentive (firm target)/award fee (FPIF/AF), was issued as a sole source acquisition. Deployment will complete in FY96.

UNCLASSIFIED

<b>RDT&amp;E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)</b>		DATE	March 1996
BUDGET ACTIVITY	PE NUMBER AND TITLE		
<b>5 - Engineering and Manufacturing Development</b>	<b>0604851F ICBM Modernization EMD</b>		

(U) Guidance Replacement Program. An EMD contract was awarded to develop, test, and replace selected guidance electronics and software. A cost plus-award-fee (CPAF) contract was issued following full and open competition.

(U) Propulsion Replacement Program. Planned acquisition will consist of all hardware and software modifications; integration and flight test support; delivery of remanufactured Stage 1, 2, and 3 motors; nuclear certification analysis tasks; and independent software certification. All contractual actions are sole source negotiated procurements using cost plus-award-fee (CPAF) contracts.

(U) Strategic C4. The program will initially focus on the modification and integration of existing Miniature Receive Terminals (MRT) into Modified Miniature Receive Terminals (MMRT) for use in ICBM launch control centers (LCC). The type of engineering and manufacturing development (EMD) contract, and the production contract are TBD. An acquisition strategy similar to that used for the E-4B/E-6B MEECN-sponsored MMRT program is anticipated.

**(U) B. Program Change Summary (\$ in Thousands)**

	FY 1995	FY 1996*	FY 1997	Total Cost TBD

133B	Rapid Execution and Combat Targeting	21,758	3,988	0	0	0	0	0	0	292,962	

**(U) A. Mission Description and Budget Item Justification**

(U) Minuteman launch control centers (LCCs) have been deployed since the early 1960's. Since the original deployment, numerous communications and weapon system modifications have been installed on a stand-alone basis without consideration for human engineering interfaces and space limitations of the LCC. Additional communications requirements and changes in crew procedures have, over time, resulted in task saturation of the crew members. Air Force Material Command studies show that the weapon system control element is reaching the end of its useful life. Manufacturers no longer produce many of the replacement parts and computer memory capacity has reached its limits. The Rapid Execution and Combat Targeting (REACT) program was initiated in 1988 to address these concerns. The program combines five related efforts to improve maintainability, supportability, reliability, responsiveness and operability of the weapon system: weapon system controller hardware replacement, rapid message processing, rapid retargeting software, launch control center console integration, and missile procedures trainer computer replacement. The program will modify LCCs and associated trainers. The new weapon system control element provides significantly increased system capacity and eliminates supportability difficulties of the current weapon system controller. REACT will be integrated into both currently deployed versions of the Minuteman LCC (AM & B weapon systems). The rapid message processing element and rapid retargeting will streamline current procedures and provide greater flexibility for crew members responding to critical National Command Authority directives. The missile procedures trainer modification will reflect current operational configurations and ensure crew members receive maximum benefit from training time. This project sustains a fielded operational weapon system.

**(U) FY 1995**

- (U) \$12,232 Continued weapon system control element hardware and software development (B system).  
 - (U) \$2,889 Continued REACT communications element development (B system).  
 - (U) \$2,527 Continued nuclear safety cross check analysis of operational software.  
 - (U) \$4,110 Completed AM weapon system deployment, conducted B system software configuration audits, began B weapon system Initial Operational Test and Evaluation (IOT&E). Completed formal B weapon system test, obtained nuclear certification of B weapon system software.  
 - (U) \$21,758 Total

**(U) A. Mission Description and Budget Item Justification**

(U) Ongoing Minuteman life extension efforts are required to extend the life of the Minuteman. The Joint Requirements Oversight Council validated the Mission Need Statement for a Future Guidance System for Intercontinental Ballistic Missiles (ICBM) on 5 November, 1992. GRP replaces failing guidance system electronics, and preserves the option to configure the missiles with the Peacekeeper Mk 21 reentry vehicle and an advanced inertial measurement unit. The Engineering and Manufacturing Development (EMD) contract was awarded to Rockwell International in August 1993. GRP includes the EMD, production, and installation of replacement guidance components to extend the life of the operational Minuteman force. Funding reflected here is for EMD.

**(U) FY 1995**

BUDGET ACTIVITY		PE NUMBER AND TITLE									
5 - Engineering and Manufacturing Development		0604851F ICBM Modernization EMD									
PROJECT NO. AND NAME		4210 Propulsion Replacement Program									
COST (\$ in Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
4210	Propulsion Replacement Program	28,609	66,170	87,567	76,158	67,916	32,009	0	0	367,799	
<p>(U) <u>A. Mission Description and Budget Item Justification</u></p> <p>(U) The Propulsion Replacement Program will remanufacture solid fuel stages to correct age-related degradations, maintain existing weapon system reliability, and support Minuteman life extension. Any of the degradations (propellant cracking, case corrosion, liner deterioration, inhibitor deterioration, and liner debond) can cause catastrophic motor failure and, in turn, mission failure. RDT&amp;E efforts will identify replacement materials that are no longer available or which have become environmentally unacceptable, reduce life cycle costs, and identify corrections to age-related degradations. This project incorporates only changes that can be demonstrated in an appropriate time frame to ensure the Minuteman propulsion system continues to meet existing performance capabilities and remains viable and supportable. The project entered Phase 2 (Engineering Manufacturing and Development) in FY94.</p> <p>(U) <u>FY 1995</u></p> <ul style="list-style-type: none"> <li>- (U) \$9,741 Integrated program activities such as system engineering, program management, range support, AEDC testing, booster disassembly/assembly, booster transportation.</li> <li>- (U) \$9,453 Continued fabrication, tooling and waste disposal for change verification motors.</li> <li>- (U) \$6,642 Continued component reuse and materials replacement studies, continued stage design and development.</li> <li>- (U) \$2,773 Partial Adjustments to Appropriated Value for Guidance Replacement Program (BPAC 3085, this PE) but funded from Propulsion Replacement Program (BPAC 4210, this PE).</li> <li>- (U) \$28,609 Total</li> </ul> <p>(U) <u>FY 1996</u></p> <ul style="list-style-type: none"> <li>- (U) \$23,688 Continue fabrication, tooling and waste disposal for change verification motors.</li> <li>- (U) \$23,226 Integrate program activities such as system engineering, program management, range support, AEDC testing, booster disassembly/assembly, booster transportation.</li> <li>- (U) \$19,256 Continue component reuse and materials replacement studies, continue stage design and development to include refurbishment.</li> <li>- (U) \$66,170 Total</li> </ul>

**(U) A. Mission Description and Budget Item Justification**

(U) The Strategic C4 program will modernize the command, control, communications and computers (C4) systems associated with assured force execution/termination of the ICBM force structure. The program will initially focus on the modification and integration of existing government furnished Miniature Receive Terminals (MRT) for use in ICBM launch control centers (LCCs). The MRT is a VLF receiver already designed, developed, and installed in the B-1B and B-52 bombers. This program will use MRT assets no longer required by the B-1 and B-52.

(U) FY 1995 (\$ in Thousands): Accomplished under MEECN (PE 0303131F)

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The mission of GCSS-AF (BLSM II) is to modernize the software portion of standard Automated Information Systems (AISs) into integrated systems that are responsive to Air Force needs during wartime and peacetime. GCSS-AF will give Wing Commanders and other users the ability to access readily available mission information which resides on geographically and functionally disparate systems. GCSS-AF will create standard software applications that can be used effectively both during wartime and peacetime which will end the need to learn a new system when deployed. GCSS-AF applications will use an open systems environment. The applications will inter-operate with other base level support systems, key Air Force systems, and command and control (C2) systems. This will increase the operational readiness of all base level automated data processing systems supporting the weapon systems, reduce logistics support costs, improve the productivity of Air Force personnel, and provide critical decision making information to operational commanders. This program is in Budget Activity 6, Management Support, because the program modernizes Automated Information Systems (AISs).</p>

<p>* FY95 submission referred to project 2617 as "Free-Flyer Spacecraft Missions." Projects 2620 and 4233 have been deleted and 2617 renamed in this submission. FY95 and out years funding reflect sums of all three projects. FY 95 budget in BAC 4.</p> <p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>(U) Space Test Program (STP) is a Budget Activity/Research Category RDT&amp;E Management Support program. It provides support to the DoD space research community by providing unique spaceflight testing opportunities for experiments with military relevance whose scopes can range from basic research to advanced development. STP missions are the most cost-effective way to flight test new space systems technologies, concepts and designs, providing an inexpensive way to:</p> <ul style="list-style-type: none"> <li>- Demonstrate the feasibility of new space systems and technologies,</li> <li>- Improve operational design by characterizing the space environment and event or sensor physics proposed for an operational system or system upgrade,</li> <li>- Provide early operational capabilities to evaluate their usefulness or quickly react to new developments,</li> <li>- Perform operational risk reduction through direct flight test of prototype components,</li> <li>- Develop the knowledge base from which to plan new and improved operational systems and system upgrades, and</li> <li>- Exploit unanticipated discoveries and opportunities.</li> </ul> <p>This DoD program provides the only substantial spaceflight capability to perform fly-before-buy, risk-reducing demonstrations of advanced technologies in operational space environments.</p> <p>(U) The space research experiments that STP supports are justified, developed and delivered by various Service laboratories and DoD agencies, with the goal of improving DoD's current and future operational space system's performance. Experiments are considered for spaceflight based on the priority that they are assigned by a DoD Space Experiment Review Board, a group that is independent of the STP Program Office, and is comprised of Air Force, Army, Navy, and BMDO representatives with expertise in DoD operational space requirements. STP is given the Board's prioritized list of experiments and then seeks out the least expensive means of spaceflight so as to fly as many of the experiments as it can within the constraints of priority, opportunity and available funding. The most common spaceflight opportunities include piggybacking on military or commercial satellites, both foreign and domestic; and the various payload modes of the Space Shuttle. For those experiments whose requirements cannot be satisfied with these "secondary" opportunities, dedicated STP spacecraft and launch vehicle hardware are procured within the constraints of available funding and according to experiment requirements. These include Small and Medium Launch Vehicle class satellites, as well as Small Launch Vehicle class boosters themselves. Medium Launch Vehicle class boosters are provided as required by PE 35119F. If a particular</p>

<p>manifested experiment fails to materialize, is deemed impractical to fly given current funding, or if the appropriate spaceflight opportunity becomes unavailable, STP shifts what resources remain to provide spaceflight support for the next highest priority experiments.</p> <p>(U) The Air Force requires a stable funding level and the flexibility necessary to take advantage of whatever means of spaceflight is deemed to be most cost effective for a given experiment or complement of experiments. This flexibility is essential to take advantage of inexpensive "target of opportunity" space hardware, including operational spacecraft, where margin is usually firmly identified during the later stages of spacecraft development. This assures that the greatest amount of DoD space research is accomplished with the limited funds available. Without the requested funding, DoD would lose its most successful and most cost effective capability to launch and test new technologies prior to their initial incorporation into our nation's very expensive and demanding operational space systems. Insufficient funding would also force each of the Services and DoD agencies to create individual launch capabilities in an attempt to duplicate STP's current low cost, risk mitigating capability. Such a redundancy would result in the loss of the contractual economy of scale that a single space test organization provides, as well as the filtering function of the STP Space Experiment Review Board in assuring minimum duplication.</p>

(1) This project was transferred from PE 0605708F, Nav/Radar/Sled Track Support, effective FY 96.

(2) This project was transferred from PE 0305887F, Electronic Combat Intelligence Support, effective FY 96.

(U) A. **Mission Description and Budget Item Justification:** This PE provides funding for the elements necessary to support the AF Electronic Warfare (EW) Test Process. This test process provides a methodology to ensure the effective disciplined and efficient testing of AF EW and avionics systems. Each capability or facility improvement is pursued in concert with the others so as to avoid duplicate capabilities while at the same time produce the proper mix of test resources needed to support the AF EW Test Process. This PE provides funding for the management and technical oversight of implementation activities, the Air Force-led tri-Service effort to establish a common modeling and simulation architecture, measurement facilities operation and improvements, hardware in the loop test facilities operation and improvements, installed system test facility improvement, and development and improvement of open air threat simulators for flight testing. This PE also provides funding to support the Radar Target Scatter program (supports radar cross-section measurement), and the Foreign Materiel Program, specifically, operational exploitation.

<p><b>(U) A. Mission Description and Budget Item Justification:</b> The AF requires a comprehensive set of ground test facilities to implement the Air Force Electronic Warfare (EW) Test Process. In order that program risk throughout the weapon system acquisition life cycle is managed effectively and flight testing is conducted effectively and efficiently, a range of ground test capabilities from modeling and simulation architecture to the installed system test facility (ISTF) are required. The EW Test Process Support task provides for management, and coordinated technical oversight of the investment in and application of EW test facilities including analyses, studies and related documentation. The Joint Modeling and Simulation System (J-MASS) is an Air Force-led, Tri-Service project to establish a DoD-wide common digital simulation architecture in support of test and evaluation. This standard architecture will provide for credibility and correlation of test and evaluation results for all phases of the weapon system acquisition life cycle. The Hardware in the Loop (HITL) test facilities evaluate electronic support and countermeasures effectiveness prior to installation on the aircraft. Together the two AF HITL facilities, the Air Force Electronic Warfare Evaluation Simulator (AFEWES) and the Real Time Electromagnetic Digitally Controlled Analyzer and Processor (REDCAP) provide the ability to realistically evaluate hardware components against manned hardware threat representations early enough to affect final system design. The Electronic Combat Integrated Test (ECIT) project upgrades the AF ISTF at Edwards AFB, CA. The ISTF provides for thorough weapon system evaluation in a large instrumented anechoic chamber prior to and during flight test. Three sources of funding are required to support the ECIT upgrade. Funding from this program element will provide for Air Force-unique and general infrastructure. Air Force funds from the F-22, C-17, B-1, and F-16 programs will provide for aircraft-specific test requirements. OSD funding from the Central Test and Evaluation Improvement Program (CTEIP) will provide for joint Navy/Air Force development of the radar target generator, infrared (IR) target generator, and the communication, navigation, and identification friend or foe (CNI) simulator system. These three systems will be incorporated into both the AF ISTF and Navy ISTF at Patuxent River, MD. The antenna measurement and analysis facilities at Rome Laboratory, NY, supported by this project are transitioning to full customer funding beginning in FY 96.</p> <p>(U) FY 1995 (\$ in Thousands) Program:</p> <ul style="list-style-type: none"> <li>- (U) \$1,000 EW Test Process Support. Began the definition of a test facilities network that will support the full application of the EW Test Process in each phase of the DoD System Acquisition Process for federated and integrated avionics systems.</li> <li>- (U) \$2,366 J-MASS. Developed software upgrade. Continued development of enhanced modeling and simulation architecture to support one-on-one simulations. Developed real-time applications and a few-on-few modeling capability. Developed a C++ model development capability.</li> <li>- (U) \$4,820 AFEWES Operation and Upgrade. Continued operation of the AFEWES in support of Army, Navy, Air Force and non-DoD customers. Continued work on the Test Director System (TDS) and the Reconfigurable Airborne Interceptor (RAI) simulator. Canceled development of the Reconfigurable Surface-to-Air Missile (RSAM) simulator. Integrated the Multiple Emitter Generator (MEG) with the RAI simulator to provide multiple threat signals to the jammer being tested against the RAI.</li> <li>- (U) \$12,000 REDCAP Operation and Upgrade. Continued REDCAP operations in support of Army, Navy, Air Force, and non-DoD customers.</li> </ul>

## 6 - Management Support

## 0604256F Threat Simulator Development

PROJECT NO. AND NAME

## 3321 Electronic Warfare Ground Test Resources

Continued documentation of existing REDCAP EW/GCI (Ground Controlled Intercept) radars and their integration with the new/upgraded REDCAP facility architecture.

- (U) \$8,866 ECT. Released RFP, conducted source selection, and awarded a risk-reduction contract for generic EW and avionics installed system test facility.

- (U) \$2,006 ECCM. Acquired an additional millimeter wave (MMW) simulator channel for ECCM efforts in Guided Weapons Evaluation Facility (GWEF), and procured a scenario controller, electro-optical EO/IR imaging simulator, and advanced stores management avionics simulator for the Pre-Flight Integration of Munitions and Electronic Systems (PRIMES) facility.

- (U) \$2,000 Rome Laboratory Antenna Measurement Facilities. Continued operation, development and improvement of ground and airborne far-field antenna measurement and analysis facilities. Optimized the range to support F-22 Aperture Development Program. Provided capability to support AF Special Operations Command, Warner Robins Air Logistics Center, and 412th Test Wing C-130 Gunship EW and Advanced Signal Collection Upgrade Programs. Developed capability to support the F-15 production decision on Manned Destructive Suppression of Enemy Air Defenses Program. Modified the B-1B testbed to support the Conventional Mission Upgrade Program.

- (U) \$33,058 Total

## (U) FY 1996 (\$ in Thousands) Planned Program:

- (U) \$1,500 EW Test Process Support. Continue the definition of a test facilities network that will support the full application of the EW Test Process in each phase of the DoD System Acquisition Process for federated and integrated avionics systems. Formulate an investment strategy and implementation plan to realize this network.

- (U) \$2,224 J-MASS. Develop capability to run simulations composed of models that can be written on a variety of hardware platforms. Integrate MOSAIC models to provide an infrared simulation capability. Integrate the SUPPRESSOR model to provide mission training. Continue providing J-MASS user support and training. Add terrain modeling and an object-oriented database management system.

- (U) \$7,592 AFEWES Operation and Upgrade. Continue AFEWES operations in support of Air Force, Army, Navy, and non-DoD test customers. Complete development of the TDS and RAI simulator. Upgrade the TWS-10 simulator to conform to the latest intelligence data. Initiate upgrades to the IR laboratories to test integrated IR alert/response, improve jammer-to-signal (J/S) ratio, and IR computer.

- (U) \$12,571 REDCAP Operation and Upgrade. Continue REDCAP operations in support of Air Force, Army, Navy, and non-DoD test customers. Initiate digital threat system modeling and simulation including an integrated air defense model in support of the EW Test Process. Use FY 96 funds to sustain FY 97 REDCAP in support of Army, Navy, and Air Force and non-DoD customers.

0604256F Threat Simulator Development

PROJECT NO. AND NAME

6510 Electronic Warfare Flight Test Resources

	COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
6510 Electronic Warfare Flight Test Resources		4,930	10,242	11,067	9,029	5,145	2,703	2,897	0	TBD

(U) **A. Mission Description and Budget Item Justification:** This project funds those resources, including simulators and instrumentation, necessary to support flight test in an open-air environment. It includes the development of advanced signal sources to represent ground and airborne threats and the upgrade of existing threat simulators to maintain currency with the latest intelligence. This project funds the development of an Advanced Airborne Interceptor Simulator (AAIS) in conjunction with the Central Test and Evaluation Improvement Program (CTEIP). CTEIP funds the non-recurring engineering (NRE) portion of AAIS development, whereas this project acquires the AAIS hardware.

## (U) FY 1995 (\$ in Thousands) Program:

- (U) \$1,964 EMTE. Electromagnetic Test Environment Acquired SADS XII antenna. Continued instrumentation and closed-loop missile simulation on foreign surface-to-air missile (SADS VM). Incorporated the latest intelligence information into simulators for threats for which real systems are not available.

- (U) \$2,966 AAIS. Awarded contract to develop, fabricate, integrate, and test an airborne test simulator to be completed 4Q FY 98.

- (U) \$4,930 Total

## (U) FY 1996 (\$ in Thousands) Planned Program:

- (U) \$10,242 AAIS. Complete design phase and begin fabrication phase.

- (U) \$10,242 Total

## (U) FY 1997 (\$ in Thousands) Planned Program:

- (U) \$11,067 AAIS. Complete fabrication phase. Begin preparation for integration/testing phases.

- (U) \$11,067 Total

2900 RATSCAT Upgrade																							
COST (\$ In Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost													
2900 RATSCAT Upgrade		0	1,937	1,990	1,990	1,990	1,990	1,989	Continuing	TBD													
(1) This project transferred from PE 0605708F, Nav/Radar/Sled Track Support, effective FY 96. (FY 94/95 funding was \$2,000 per year.)																							
<p>(U) <b>A. Mission Description and Budget Item Justification:</b> This project provides improvements to the Radar Target Scatter (RATSCAT) facility in order to assure support to address radar cross section (RCS) measurement requirements of DoD customers. Key areas of improvement complement and support the existing stand-alone Central Test and Evaluation Improvement Program (CTEIP) funded program and include radar upgrades standardization of data processing equipment and techniques, bistatic testing, pylon background reduction, low frequency measurement capability upgrades, and efficiency related equipment. The DoD continues an aggressive R&amp;D program to achieve low observable technology. This project provides a continuous effort to allow test technology to keep pace with these activities. In a related effort, OSD CTEIP provides funding for the Data Acquisition and Processing System (DAPS), Bistatic Coherent Measurement System (BICOMS), RATSCAT Advanced Measurement System (RAMS) Radar Replacement, and the Next Generation Pylon. For DAPS, CTEIP funds the hardware, development, instrumentation, and spares. For BICOMS, CTEIP funds part of the hardware and labor. For the Next Generation Pylon, CTEIP funds the pylon and installation. For RAMS Radar Replacement, CTEIP funds the hardware and labor.</p> <p>(U) <u>FY 1995 (\$ in Thousands) Program:</u></p> <table> <tr> <td>- (U)</td> <td>\$2,000</td> <td>Procured RAMS (previously Integrated Radar Measurement System) efficiency upgrades, completed the preliminary design review for BICOMS, and completed acquisition of advanced technology pylon skirts.</td> </tr> <tr> <td>- (U)</td> <td>\$2,000</td> <td>Total</td> </tr> </table> <p>(U) <u>FY 1996 (\$ in Thousands) Planned Program:</u></p> <table> <tr> <td>- (U)</td> <td>\$1,937</td> <td>Procuring risk reduction hardware for North Range Radar efficiency upgrades. ## (U) A. Mission Description and Budget Item Justification

Specialized payload subsystems are developed for full-scale and subscale targets for missile scoring, electronic and infrared (IR) countermeasures, and radar and IR signature augmentation. Current scoring systems provide only miss distance information. Noncooperative Airborne Vector Scoring (NAVS), is the tri-service system under development to provide missile path and position relative to the target at point of closest approach, which are essential to accurately calculate the probability of kill. An Interim Vector Scoring (IVS) system test and checkout is underway to meet scoring requirements until NAVS is fielded. IR signature augmentation on subscale targets provides a signature representative of threat military jet engines. Electronic and IR countermeasures (ECM & IRCM) include systems such as chaff and flare dispensers, Drone Radar Cross Section (RCS) Electronic Enhancement Mechanism (DREEM) provides RCS enhancement of Aerial Targets to replicate threats, and is used for Developmental Test and Evaluation/Initial Operational Test and Evaluation of air-to-air missiles, air-to-air Weapons System Evaluation Program (WSEP). The acquisition strategy is competitive, cost plus contracts

## (U) FY 1995 (\$ in Thousands):

(U) (U) \$375 IVS Accuracy Testing  
 - (U) \$62 Collect and compile target signature data for use in test planning  
 - (U) \$150 Next Generation Aerial Target (NGAT) Mission Need Statement/Cost and Operational Effectiveness Analysis (MNS/COEA)  
 - (U) \$50 Drone Radar Cross Section (RCS) Electronic Enhancement Mechanism (DREEM) Analysis  
 - (U) \$456 Other technical support  
 - (U) \$1,093 Total

## (U) FY 1996 (\$ in Thousands):

(U) (U) \$290 Gulf Range Drone Control Upgrade System (GRDCUS)/MQM-107E Simulation & Integration  
 - (U) \$1,500 Initiate Demonstration and Evaluation (DEMVAL) for DREEM  
 - (U) \$620 Initiate follow-on aerial target study  
 - (U) \$30 IVS Enhancement Study  
 - (U) \$75 GRDCUS/BQM-34 Heading Hold Integration  
 - (U) \$470 MQM-107E Signal Processor Vehicle Interface/Digital Autopilot (SPVI/DAP) Combination

<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>The Air Force is lead for a tri-service program for the development of the QF-4E full scale aerial target. The QF-4E is the follow-on to the QF-106 full scale target used today. The final buy of the QF-106 was in FY93 with deliveries complete in 4Qtr94. The first QF-4 production is scheduled for delivery in 3Qtr FY96 and is funded by PE 35116F procurement. Additional production options are scheduled to begin delivery in 3Qtr97 and 3Qtr98 respectively. The QF-4 Full-scale Aerial Target (FSAT) will be operated at Tyndall AFB, FL to meet over-water test requirement, and then (4Qtr97) operated at the White Sands Missile Range, NM to meet over-land test requirement. The Navy will begin using the QF-4E in FY99. Full-scale targets are representative of the threat, with realistic maneuvering performance, radar cross section and afterburning engine infrared (IR) signature. The overall objective is to improve air-to-air weapon system accuracy and reliability by developing aerial target systems for Air Force weapon system test and evaluation. Public law mandates all new or upgraded weapon systems must demonstrate lethality against a representative threat before approval to proceed with procurement. In addition to AMRAAM, AIM-7, AIM-9X, and F-22, full-scale targets are also used to support US Army air defense test and evaluation programs such as the Divisional Air Defense follow-on program, Stinger, Patriot and Improved Hawk.</p> <p>(U) FY 1995 (\$000 in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$4,385 Complete development of basic system through Drone Formation Control System testing</li> <li>- -- Conduct Production Readiness Review #2 (NSP)</li> <li>- -- Make production decision (exercise production option #1) (NSP)</li> <li>- -- Conduct final software Physical Configuration Audit (PCA) (NSP)</li> <li>- -- Complete Engineering and Manufacturing Development (EMD) phase of contract (NSP)</li> <li>- (U) \$1,135 Test and Evaluation Support</li> <li>- -- Begin DT&amp;E/IOT&amp;E at White Sands Missile Range for the integrated QF-4E system (NSP)</li> <li>- (U) \$723 Other Technical Support</li> <li>- (U) \$6,243 Total</li> </ul> <p>(U) FY 1996 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$942 Complete EMD phase of program</li> <li>- -- Complete White Sands Missile Range testing (NSP)</li> </ul>

(U) **A. Mission Description and Budget Item Justification:** This program element provides planning, improvements, and modernization for test capabilities at three Air Force Test Centers: Arnold Engineering Development Center (AEDC), Air Force Development Test Center (AFDTC), and Air Force Flight Test Center (AFFTC). The purpose is to help test centers keep pace with emerging weapon system technologies. The fluctuations in the funding at these locations are due to changing priorities in the improvement and modernization requirements as defined through the AF Test Investment Planning & Programming Process and documented in the AF Test Investment Strategic Plan. Also, all projects have been reviewed through the Tri-Service Reliance effort (to communicate AF efforts to the other services and avoid unwarranted duplication of effort) and are documented in the Test Capability Master Plans. Further, each specific project has its own planning, development, equipment acquisition/facility construction, equipment installation, and checkout phases which often requires significant differences in funding from one year to the next. As such, the changes in funding from year to year do not necessarily indicate program growth but rather a planned phasing of improvement and modernization efforts. (For FY 96 only 17 of 124 validated projects are funded, which reflects the mandated downsizing of the DoD budget, not a change in requirements.) The test capabilities at these centers enable testing through all phases of weapon system acquisition from system concept exploration through component and full scale integrated weapon system testing to operational testing. These three test centers have over \$10B worth of unique test facilities/capabilities. They are a national asset operated and maintained by the Air Force for DoD test and evaluation missions, but they are available to others having a requirement for their unique capabilities. (FY96 Congressional language added \$3 million for the Holloman High Speed Test Track to PE 65708F, which no longer exists. These funds, which are not included in the FY 96 total, will be included in a separate project within this program element after release from OSD withhold.

<p>(U) <b>A. Mission Description and Budget Item Justification:</b> The AFDTC, located at Eglin AFB, FL, conducts and supports developmental test and evaluation and operational test and evaluation of non-nuclear air armaments, electronic warfare systems, and target acquisition and weapon delivery systems; provides a climatic simulation capability; and determines target/test item electronic signatures. The Guided Weapon Evaluation Facility (GWEF) provides a full spectrum, multifunctional seeker/sensor laboratory test capability for all guided weapons. Common Airborne Instrumentation System (CAIS) Integration provides standardized airborne test to enhance interoperability and commonality. GPS Range Systems will provide a major improvement for Time-Space-Position-Information (TSP) at all MRTFBs and specifically at the Eglin Ranges for munitions testing. These projects ensure test center technology is compatible with weapon systems to be tested such as AMRAAM, JDAM, AGM-130, ASRAAM, JTIDS, JSTARS, Combat Talon, etc.</p>

## 3285 Arnold Engineering Development Center (AEDC)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
3285 Arnold Engineering Development Center (AEDC)	10,235	5,368	5,745	5,305	5,473	4,153	6,038	Continuing	TBD

(U) **A. Mission Description and Budget Item Justification:** Arnold Engineering Development Center (AEDC), Arnold AS, TN, provides ground environmental test support for DoD aeronautical, missile, and space programs. The center has 53 test facilities providing: aerodynamic testing of scale model aircraft, missile, and space systems; testing of large and full-scale satellites, sensors, and space vehicles in a simulated space environment; altitude environmental testing for aircraft, missile, and spacecraft propulsion systems; and testing of large-scale models such as space boosters together with their propulsion systems. The AEDC Data Acquisition and Processing System (DAPS) provides processing capability for advanced turbine engine testing on programs like the F-22. This effort also upgrades data systems for the arc heaters and hypervelocity gun facility for Theater High Altitude Air Defense (THAAD) testing. Inefficiencies in these current data systems result in increased program costs and schedule delays. The Computer Aided Modernization Project (CMP) will provide increased capability for data processing and storage and provide wider availability of workstations. The Fighter Engine Test Capability will upgrade turbine engine test cells to accommodate higher thrust engines, and upgrade J-2 test cell with Exhaust Gas Management System for axisymmetric vectored exhaust nozzles.

## (U) FY 1995 (\$ in Thousands) Program:

- (U) \$4,730 Continued AEDC Data Acquisition and Processing System with acquisition and installation of additional work stations/processors.  
 - (U) \$2,053 Completed Preliminary and Critical Design Reviews. Purchased first increment of CMP workstations.  
 - (U) \$1,724 Completed design, purchase vacuum jacketed piping and begin fabrication to upgrade the J-4 Cryogenic Liquid Rocket Test Capability.  
 (This project will be completed using customer funds.)  
 - (U) \$1,728 Completed FOC of J-6 project, T-7 Control System IOC for Test Unit Support System (TUSS) project, increased thrust rating of the T-cells for the ongoing Fighter Engine Test Capability upgrade, continued studies of existing test capabilities used for weather erosion testing and Joint Program Office (JPO) for T&E support.  
 - (U) \$10,235 Total

3620 Air Force Flight Test Center (AFFTC)											
COST (\$ In Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
3620	Air Force Flight Test Center (AFFTC)	22,815	19,901	18,379	17,850	14,237	14,992	15,643	Continuing	TBD	
<p>(U) A. <u>Mission Description and Budget Item Justification:</u> The AFFTC, located at Edwards AFB, conducts and supports developmental test and evaluation and operational test and evaluation of aircraft and aircraft systems, aerospace research vehicles, unmanned miniature vehicles, cruise missiles, parachutes delivery/recovery systems, and cargo-handling systems. The AF Common Airborne Instrumentation System (CAIS) Integration &amp; Support (CAIS I&amp;S) supports DoD objectives for interoperability/commonality. The goal of CAIS I&amp;S is to integrate CAIS equipment and supporting instrumentation equipment and systems to provide a full airborne instrumentation operational capability. The Advanced Data Acquisition and Processing Systems (ADAPS) project provides an integrated capability to satisfy real-time first generation post-test data processing, archival, and display requirements through the 1990s. The developmental approach is directed towards providing a high degree of interoperability between systems and components by adherence to Air Force and DoD guidelines. The technologies being developed under ADAPS have the potential to satisfy data processing and display needs at various multi-service test ranges. The AF GPS RAJPO Equipment project provides funding for the purchase of production GPS equipment developed by the RAJPO (OSD funded) for tri-service application. The Space Based Data Relay (SBDRL) project provides the capability for ARIA to fulfill customer needs for real time, high-speed data, and greatly improve the overall range data relay capability. The ARIA Extended S-Band Telemetry upgrade ensures the compatibility of the ARIA with the Expendable Launch Vehicles (ELV) and major DoD ranges.</p>

PROJECT NO. AND NAME

3620 Air Force Flight Test Center (AFFTC)

(U) FY 1995 (\$ in Thousands) Program:

- (U) \$1,650 Continued procurement of RAJPO GPS equipment.

- (U) \$5,161 Finished the development and installation of the prototype (build #1) ADAPS system. Began development of a mass storage and database capability. This system will eventually replace the 65,000 nine-track tapes currently being stored at the AFFTC.

- (U) \$1,340 Under the Automated Test Data Management System (ATDMS) project, completed the development of the first automated data setup in support of the ADAPS system. Provided an interface to the Test Information Management System (TIMS). Conducted Preliminary Design Review and Critical Design Review.

- (U) \$4,326 Continued CAIS I&S development. Released version 2.2 of the TIMS software to support CAIS. Awarded development contract for data recorder, and continued to order CAIS hardware. Awarded requirements contract for TIMS ground support equipment. Awarded development contract for full S-Band transmitter.

- (U) \$5,806 Began equipment purchase and T-2 Mod Design for the ARIA Space Based Data Relay System program.

- (U) \$1,169 Continued the ARIA S-Band program with purchase of equipment and modification of first aircraft.

- (U) \$3,363 Continued upgrades to several projects (less than \$1,000 each): Local Range Network, Digital Switch, Ground TSPI, Scientific and Computer Acquisition Project, Test Instrumentation Project, CAE/CAM, Test and Evaluation Mission Simulator (TEMS), Avionics Test Bay Systems (ATBS), and Joint Program Office (JPO) for T&E support.

- (U) \$22,815 Total

(U) FY 1996 (\$ in Thousands) Planned Program:	
- (U) \$6,122	Continue CAIS I&S development. Complete CAIS diagnostic bench integration. Purchase CAIS low rate data recorder initial spares. Complete TMS integration with CAIS (assumes availability of CAIS units).
- (U) \$5,363	IOC first ADAPS real-time/post-processing (RT/PP) system. Procure the first mass storage archive system to replace nine track tapes currently being used.
- (U) \$3,408	Continue purchase of RAJPO GPS equipment. Conduct acceptance testing of GPS equipment purchased in FY 95.
- (U) \$2,812	Continue ARIA Space Based Data Relay System program. Complete non-recurring engineering work on system design and T-2 aircraft modification. Commence equipment installation and aircraft modification.
- (U) \$1,697	Continue the ARIA Extended S-Band program equipment installation and aircraft #1-4 modification.
- (U) \$429	Continued upgrades to several projects (less than \$1,000 each): JPO T&E support.
- (U) \$70	OSD Withhold
- (U) \$19,901	Total

(U) FY 1997 (\$ in Thousands) Planned Program:	
- (U) \$6,835	Continue ARIA Space Based Data Relay program. Continue equipment installation/fabrication and #2 aircraft modification.
- (U) \$4,635	Continue CAIS I&S development. Purchase CAIS components for AFFTC use. Continue TMS development with automated setup of systems, automated diagnostics, and simulation capability. Begin development of a CAIS optical bus interface unit.
- (U) \$3,998	FOC of ADAPS RTE/PTP. Procure second mass storage archive system. Begin integration of ADAPS with ground test simulation capabilities.
- (U) \$1,758	Continue the ARIA Extended S-Band equipment installation and modification on second aircraft.
- (U) \$1,163	Continued work on following projects (less than \$1,000 each): Complete RAJPO GPS Integration, JPO (T&E) Support.
- (U) \$18,389	Total

**(U) A. Mission Description and Budget Item Justification**

Program funds RAND Project AIR FORCE (PAF), the only Air Force Federally Funded Research and Development Center for studies and analyses. It provides for continuing analytical research across a broad spectrum of aerospace issues and concerns. The PAF research agenda is focused primarily on mid- to long-term problems; in addition, PAF provides quick response assistance for senior Air Force officials on high priority, near-term issues. Results and analytical findings directly impact senior management deliberations on major issues. The Air Force Advisory Group (AFAG), chaired by the Vice Chief of Staff, reviews, monitors, and approves PAF research efforts. Each project is initiated, processed, and approved IAW PAF Sponsoring Agreement that requires General Officer (or SES equivalent) sponsorship and involvement on a continuing basis. This program primarily focuses on studies and analyses, and is in Research Category and Budget Activity for Management Support. An initiative to increase FY98-03 funding will be addressed in the FFRDC Review.

(U) PAF research continued to be organized in the seven projects shown in 1995. These seven projects were aimed at ensuring the Air Force can project aerospace power across the entire spectrum of conflict in an era of declining budgets, personnel, and force structure. These projects are continuing efforts, and do not lend themselves to a specific schedule profile.

(U) In 1995, principal research efforts included studies on the future bomber force, Air Force operations within the JROC/JWCA process, airpower projection force mix, future aircraft technologies, enhancing the effectiveness of mobility forces, counter-proliferation, planning forces for the long-term security environment, modeling airpower operations in a joint theater campaign, implementing the Air Force C4I architecture, implementation of lean logistics, economic viability of the military aircraft industry, and a new paradigm for Air Force acquisition.

(U) In 1996, the principal focus of PAF research is to transition the Air Force into the 21st century. Where should the Air Force head in response to shifts in national security demands and diminished budgets? What are the problems and risks in getting there?

(U) Projects to be undertaken in PAF address cross-cutting issues using an integrated end-to-end approach. The scope of the research agenda encompasses future security environment and strategy, force development and force application, operational sustainment, applications of new technology, advances in modeling and simulation and analytical methods, resource management and system acquisition.

(U) PAF research is managed under three interrelated programs with integrated research at the division level; the projected level of effort in 1996 is shown below.

(U) In 1997, Research will continue on long-term projects initiated in 1996 and prior years. New topics will evolve from the major issues established by the AFAG in which PAF has developed special expertise and can continue to make unique contributions to the Air Force.

(U) PAF research will continue to be organized in three interrelated programs with integrated research at the division level; the projected level of effort in 1997 is shown below.

## (U) FY 1995 (\$ in Thousands):

(U) **A. Mission Description and Budget Item Justification:** This RDT&E Management Support program was directed in 1980 by the Assistant to the President of the United States for Domestic Affairs and Policy upon the recommendation of the Interagency Working Group on the Possible Long-Term Effects of Phenoxo Herbicides and Contaminants. As a result of this Presidential direction, PE 0605306F was established to conduct a 20-year epidemiology investigation of approximately 1,200 Air Force personnel who were involved with aerial spraying of herbicides in Vietnam from 1962 to 1971 (Operation Ranch Hand). The objective of this investigation is to determine whether long-term health effects exist and can be attributed to occupational exposure to phenoxo herbicides and their associated dioxins. Dioxin is an unwanted by-product from manufacturing Herbicide Orange.

This project involves a 20-year study that compares United States Air Force (USAF) Ranch Hand personnel to other USAF crew members and support personnel who were not exposed to herbicides while serving in Vietnam. Approximately 2,200 individuals (exposed personnel group plus control group) are participating in the study. Analyses of yearly mortality rates and the past and present health status of the study population were begun in 1982 with follow-up health examination schedules at the 3-, 5-, 10-, 15-, and 20-year time periods. The study includes examination of the possible occurrence of birth defects in children as determined from children's medical records and family medical histories.

## (U) FY 1995 (\$ in Thousands):

- (U) \$669 Completed Year-10 morbidity report.  
 - (U) \$729 Completed annual mortality update.  
 - (U) \$734 Conducted statistical analysis of data sets.  
 - (U) \$500 Demonstrated archiving of baseline physical exams.  
 - (U) \$524 Conducted additional analyses and reports.  
 - (U) \$3,156 Total

## (U) FY 1996 (\$ in Thousands):

- (U) \$1,893 Issue Air Force Health Study contract.  
 - (U) \$516 Complete annual mortality update.  
 - (U) \$163 Complete archiving of 1985 physical exams.  
 - (U) \$250 Conduct Participant Data Base Management.  
 - (U) \$203 Conduct statistical analyses in support of journals and reports.

0605704F Theater Air Defense BMC4I

PROJECT NO. AND NAME

1010 Theater Air Defense Battle Mgt C4I

COST (\$ in Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1010 Theater Air Defense Battle Mgt C4I	0	0*	12,496	18,382	18,126	18,149	17,863	0	TBD

\* In FY 96 TAD BMC4I was funded in P.E. 27601 and subsequently moved to this P.E. after this documentation was prepared. FY 96 description of effort is included below for consistency.

(U) A. Mission Description and Budget Item Justification

This project was established in response to a charter from ASD/C3I identifying the Air Force as the Executive Agent for Theater Air Defense Battle Management Command, Control, Communications, Computers, and Intelligence (TAD BMC4I). It supports the study, analysis, demonstration and establishment of integrated TAD BMC4I which fuses and expands on existing capabilities to support the theater CINCs. This project involves defining baseline TAD BMC4I architectures and developing objective architectures; analyzing TAD BMC4I issues in a coordinated Joint Staff/Services/CINCs/Defense Agencies manner; reviewing TAD requirements, programs, systems, architectures, studies, modeling and any associated impacts on TAD BMC4I interoperability; identifying TAD BMC4I shortfalls and proposed solutions; establishing and maintaining a TAD BMC4I requirements database; assessing allied TAD BMC4I issues; and supporting exercises and demonstrations of integrated TAD BMC4I capabilities. The P.E. is included in Budget Activity 6 because it provides management support to the Executive Agent for Theater Air Defense BMC4I.

## (U) FY 1997 (\$ in Thousands):

- (U)	\$4,178	Develop framework and concepts for architecture validation and migration roadmap for objective TAD BMC4I architecture, including required technical and operational/functional migrations.
- (U)	\$4,832	Continue interoperability reviews for requirements, programs, systems, architectures, modeling affecting TAD BMC4I and exploring Service and Joint Battle Management Command, Control, Communications, Computers, and Intelligence (BMC4I) systems for disconnects and opportunities to improve joint integrated BMC4I.
- (U)	\$931	Continue Command and Control (C2) Plan development to fully integrate Battle Management and Intelligence functions, and plan automated Joint TAD BMC4I planning capability.
- (U)	\$2,555	Support CINCs' assessments of operational Theater Air Defense capabilities, identify procedural and architectural shortcomings, and experiment with potential procedural and hardware/software solutions and demonstrations which support the Theater Air Defense (TAD) architecture.
- (U)	\$12,496	Total

(U) **A. Mission Description and Budget Item Justification:** This program funds IOT&E tests conducted to evaluate a system's operational effectiveness and suitability and to identify any operational deficiencies or need for modifications in support of the acquisition process. This PE funds Congressionally mandated IOT&E to support major weapon system acquisition decision (Milestone III). For major systems designated for use in combat, the law requires IOT&E be completed under realistic field conditions before proceeding beyond low rate initial production. As an essential element of IOT&E, this PE will fund major Operational Utility Evaluations (OUE), Early Operational Assessments (EOA) and Operational Assessments (OA) which support major milestones and decision points prior to Milestone III. IOT&E is an operational evaluation of a system's performance when the complete system is tested and evaluated against operational criteria by personnel with the same qualifications as those who will operate, maintain and support the system when deployed. In general, IOT&Es are performed on new systems in development, major modifications and other systems as directed. IOT&E programs are identified in five categories: aircraft/support; space; missile/munitions; computer, communication, command and control and information (C4I); and general. This PE funds the costs of the test (e.g., data reduction, range costs, etc.), not the development of test resources or the maintenance of test infrastructure.

(1) Test and Evaluation Support, project 6606TS, was combined from projects 06RB, 06YA, and 06ZA in this PE, effective FY 96. (FY 95 total includes project 06UC). Base Operating Support (BOS) funds (\$26,400 in FY 96) were transferred from PE 0605807 (Arnold Engineering Development Center) into PE 0605896F. The purpose of the transfer is to more evenly account for BOS-type efforts within PE 0605896F at the three major AF test centers. Similarly, approximately \$26,000 has also been transferred in FY 97-01.											
(2) Aircraft Support, project 6606AS, was transferred from PE 0605863F (combining projects 662111 and 662112), effective FY 96. Funding in FY 95 refers to PE 0605863F.											
(3) Minor Construction, project 6606MC, was transferred from PE 0605876F, effective FY 96. Funding in FY 95 refers to PE 0605876F.											
(4) Maintenance and Repair, project 6606MR, was transferred from PE 0605878F, effective FY 96. Funding in FY 95 refers to PE 0605878F.											
(5) 46 Test Group, project, 6606TG, was transferred from PE 0605708F, effective FY 96. FY 95 totals include both the test infrastructure and test investment portion of PE 0605708F. Beginning in FY 96, the funding in this project is only for test infrastructure. Radar Target Scatter investment transfers to PE 0604256F.

BUDGET ACTIVITY

PE NUMBER AND TITLE

## 6 - Management Support 0605807F Test And Evaluation Spt

(U) **A. Mission Description and Budget Item Justification:** This program element consolidates five PEs (or portions thereof) as mentioned above. The aircraft support project provides resources for maintaining Air Force Materiel Command (AFMC) assigned test and test support coded aircraft which are included as a portion of the Department of Defense Major Range and Test Facility Base (MRTFB). The Minor Construction project provides essential minor construction at the three Air Force MRTFBs (Eglin AFB FL, Edwards AFB CA, and Arnold AFB TN). The Maintenance and Repair project provides real property maintenance and repair at the three MRTFBs. The 46 Test Group (46TG) project provides the following unique capabilities as part of the DoD MRTFB: the High Speed Test Track (HSTT), Central Inertial Guidance Test Facility (CIGTF), and the Radar Target Scatter (RATSCAT) facility. The Test and Evaluation (T&E) Support program provides resources to operate the above Air Force test activities. The increase in FY 97 represents funding for implementing the majority of the Level 1 requirements for Commander's Facility Assessment with a particular emphasis on operational facilities and base infrastructure.

(U) **B. Program Change Summary (\$ in Thousands):**

PROJECT NO. AND NAME

06TS Test and Evaluation Support (1)

COST (\$ in Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
06TS Test and Evaluation Support (1)	377,227	316,725	314,101	322,541	317,638	321,465	309,128	Continuing	TBD

(1) Test and Evaluation Support, project 6606TS, was combined from projects 06RB, 06YA, and 06ZA in this PE, effective FY 96. FY 95 total includes project 06UC, Utah Test and Training Range). Base Operating Support (BOS) funds (\$26,400 in FY 96) were transferred from PE 0605807 (Arnold Engineering Development Center) into PE 0605896F. The purpose of the transfer is to more evenly account for BOS-type efforts within PE 0605896F at the three major AF test centers. Similarly, approximately \$26,000 has also been transferred in FY 97-01.

(U) **A. Mission Description and Budget Item Justification:** This project provides resources to operate the Air Force test activities which are included in the Department of Defense (DoD) Major Range and Test Facility Base (MRTFB). Test facilities/capabilities operated through this program include wind tunnels, rocket and jet engine test cells, space environmental simulation chambers, armament test ranges, climatic test facilities, avionics test facilities, aircraft testbeds, dry lakebed landing sites, and instrumented test ranges. T&E Support funds test infrastructure overhead activities including: command and supervisory staffs; supply stocks; upkeep, refurbishment, repair, and replacement of worn or obsolete test equipment; test infrastructure for data collection, transmission, reduction, and analysis; civilian salaries; temporary duty travel; support contract costs for hardware and software engineering and maintenance; and minor improvement and modernization projects. Three major Air Force test centers are supported by this project: (1) Arnold Engineering and Development Center (AEDC) which provides the test infrastructure overhead support to operate the largest complex of ground test facilities in the free world (includes transonic, supersonic, and hypersonic wind tunnels; rocket motor and turbine engine test cells; space environmental test chambers, hyperballistic ranges; and other specialized facilities). (2) Air Force Flight Test Center (AFFTC), Edwards AFB CA which provides test infrastructure overhead support for development and operational test and evaluation support for aircraft and aircraft systems, aerospace research vehicles, unmanned miniature vehicles, cruise missiles, parachute delivery/recovery systems, and cargo handling systems, and Electronic Warfare (EW) systems for DoD and allied forces. The AFFTC also operates the Utah Test and Training Range (UTTR) in Northwest Utah which will be transferred to ACC in FY 97. (3) Air Force Development Test Center (AFDTC), Eglin AFB FL which provides the test infrastructure overhead support for non-nuclear air armaments (including aircraft guns, ammunition, bombs, and missiles). AFDTC provides a scientific test process that supports the development and enhancement of munitions systems. This process reduces the risk of acquisition programs and ensures military equipment will work in the combat environment.

06MC Minor Construction (1)	3,531	3,588	3,717	3,893	4,084	4,204	4,329	Continuing	TBD

(1) Minor Construction, project 6606MC, was transferred from PE 0605876F, effective FY 96. Funding in FY 95 refers to PE 0605876F.

(U) A. Mission Description and Budget Item Justification: This program element provides essential minor construction at three DoD Major Range and Test Facility Base locations: Eglin AFB FL, Edwards AFB CA, and Arnold AFB TN. Physical plant maintained by this account covers 800,000 acres of land; over four thousand structures in excess of 30 years old encompassing fifteen million square feet; over five million square yards of airfield pavement; 1900 miles of road network; utility systems that include 120 wells, 10 sewage treatment plants, 20 substations and over 1600 miles of high voltage electrical distribution lines.

(U) FY 1995 (\$ in Thousands) Program:

- (U) \$3,531      Financed in-house work performed by government employees (supplies, materials and equipment). Financed construction of airman leadership school and classroom, and replacement of propulsion wind tunnel transformer, and altered aeropropulsion systems test facility control room. Constructed new facility at a cost of \$288K after damage caused by Hurricane Erin.  
- (U) \$3,531      Total

(U) FY 1996 (\$ in Thousands) Planned Program:

- (U) \$3,588      Finance in-house work performed by government employees (to include supplies, materials and equipment). Finance construction of airman leadership school and classroom (2nd building), explosive ordnance disposal facility and performance of the most critical minor construction at the three MRTFBs.  
- (U) \$3,588      Total

(U) FY 1997 (\$ in Thousands) Planned Program:

- (U) \$3,717      Finance in-house work performed by government employees (to include supplies, materials and equipment). Finance construction of Human Resource Development Computer Laboratory, replace plenum escape system transformer and add 16KV circuit breaker to plenum escape system substation; and finance addition to equipment research laboratory and provide additional well reservoir.  
- (U) \$3,717      Total

<p>(1) Maintenance and Repair, project 6606MR, was transferred from PE 0605878F, effective FY 96. Funding in FY 95 refers to PE 0605878F.</p> <p>(U) <b>A. Mission Description and Budget Item Justification:</b> This project provides essential Real Property Maintenance and Repair at three DoD Major Range and Test Facility Base (MRTFB) locations: Eglin AFB FL, Edwards AFB CA, and Arnold AFB TN. Physical plant maintained by this account covers 800,000 acres of land; over four thousand structures in excess of 30 years old encompassing fifteen million square feet; over five million square yards of airfield pavement; 1900 miles of road network; utility systems that include 120 wells, 10 sewage treatment plants, 20 substations and over 1600 miles of high voltage electrical distribution lines. Beginning in FY 96, the increases represent an Air Force corporate decision to implement a new initiative to measure and improve facility conditions: the Commander's Facility Assessment (CFA). CFA puts a "readiness face" on real property maintenance requirements by having commanders at all levels assess their facility's condition and its impact on mission accomplishment. Facilities are assessed as either Level 1 (Unsatisfactory - minimal mission support) or Level 2 (Degraded - impaired mission support). The field commanders have unanimously endorsed CFA as the best way to determine and address mission impacts due to facility deficiencies. The program increases represent a concerted effort to fund the majority of the Level 1 requirements with a particular emphasis on operational facilities and base infrastructure.</p> <p>(U) <b>FY 1995 (\$ in Thousands) Program:</b></p> <ul style="list-style-type: none"> <li>- (U) \$33,883 Financed in house work force.</li> <li>- (U) \$8,600 Financed repairs to airfield asphalt and runway, overhead lines, electrical substation and various sewer lines.</li> <li>- (U) \$11,762 Performed various M&amp;R activities [overlay roads, repair aftercooler bundles, transformers, rotor discs, hangar doors, HVAC (heating, ventilation and air conditioning), asbestos abatement]; conducted seismic studies in various buildings; and repaired Hurricane Erin damage at Eglin AFB.</li> <li>- (U) \$54,245 Total</li> </ul>

6 - Management Support

PROJECT NO. AND NAME

06TG 46 Test Group (1)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
06TG 46 Test Group (1)	29,554	21,655	21,094	21,555	22,227	22,427	22,390	Continuing	TBD

(1) 46 Test Group, project, 6606TG, was transferred from PE 0605708F, effective FY 96. FY 95 totals include both the test infrastructure and test investment portion of PE 0605708F. Beginning in FY 96, the funding in this project is only for test infrastructure. The investment portion transfers to PE 0604256F.

(U) A. Mission Description and Budget Item Justification: Beginning in FY 96, this project funds only test infrastructure overhead support including: command and supervisory staffs; supply stocks; upkeep, refurbishment, repair, and replacement of non-repairable or obsolete test equipment; test infrastructure for data collection, transmission, reduction, and analysis; civilian salaries, utilities, temporary duty travel, support contract costs for hardware and software engineering and maintenance. Project infrastructure support is provided for the unique capabilities of the 46th Test Group facilities: the High Speed Test Track (HSTT), Central Inertial Guidance Test Facility (CIGTF), and the Radar Target Scatter (RATSCAT) facility. In FY 95 part of the funding was for investment programs: Radar Target Scatter (RATSCAT), Aircraft Navigation System Verification, and the Hypersonic Sled Track Development programs. The RATSCAT program transferred to PE 0604256F in FY 96. There is no Air Force funding in FY 96 and beyond for either the Aircraft Navigation System Verification or the Hypersonic Sled Track Development programs.

## (U) FY 1995 (\$ in Thousands) Program:

- (U) \$22,554 Provided infrastructure test support for programs such as AIMS, Minuteman III, IRCM, TMD, THAAD, PAC-3, Arrow, GBI, standard missile II, GPS jamming and spoofing, FAA GPS Precision Approach field tests, GPS integrated and imbedded INS programs, aircraft navigation systems, including B-2, F-117A antenna testing, and static RCS testing for both classified and unclassified programs including the F-117A; completed development of an automated trajectory system to reduce the cost of egress, flare and IRCM testing at the sled track deferred from FY 92.

Investments:

- (U) \$7,000 Continued test support operations for Aircraft Navigation System Verification; continued RATSCAT upgrades.

- (U) \$29,554 Total

3361 Mission & System Planning											
COST (\$ In Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
3361	Mission & System Planning	5,911	6,495	6,531	6,673	6,832	7,010	7,176	Continuing	TBD	
<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>This Program Element is the only dedicated source of funds for Air Force Mission and Functional Area Teams (MATs &amp; FATs) to perform the studies and analyses that support the Modernization Planning Process. The Air Force, through the Modernization Planning Process, is in compliance with the DoD 5000 series regulations and JCS MOP 77 which mandate that a full range of requirements analyses be continuously conducted to identify and substantiate current operational deficiencies, to identify technology needs and exploit technology opportunities, and when necessary to define the requirements for materiel solutions. First, a Mission Area Assessment (MAA) is conducted to identify tasks and substantiate operational deficiencies. These deficiencies must relate directly to assigned Air Force operational roles, missions, and supporting tasks that cannot be performed efficiently or in a cost effective manner. Second, a Mission Needs Analysis (MNA) is conducted to identify potential cost effective, non-materiel and materiel alternatives that address the deficiency, or present new technological opportunities. Non-materiel alternatives include doctrine, tactics, training, and organizational changes. Materiel alternatives include modifications to existing systems; procurement of existing DoD, Allied and non-developmental systems; or the development of new systems. Operational requirements analyses and supporting acquisition milestone documentation include MAAs, MNAs, and Mission Need Statements (MNS). Phase 0 concepts studies and Cost and Operational Effectiveness Analyses (COEAs) are not normally conducted in this program element. The major commands and Air Staff functional agencies annually propose studies for the upcoming fiscal year. An Air Force board prioritizes the proposals using a rigorous Analytical Hierarchy Process. Proposals may be modified or delayed to accommodate programmed funding. The highest priority proposals are listed in this descriptive summary and a detailed description is provided to the Congressional Appropriations committees for approval to receive funding. This process eliminates duplication of effort within the Air Force or DoD. This program is in budget activity 6 - Management Support because the results of the studies and analyses performed have a substantial impact on future Air Force warfighting capability as an input to technology, acquisition (prior to Milestone 0), and procurement investment decisions.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$992 Continued development of Integrated Definition for Functional (IDEF) Modeling analysis of merged Air Mobility command and control processes - identified mission area deficiencies and alternative solutions.</li> <li>- (U) \$789 Completed MNA to identify options for hostile target identification. Selected options to transition into existing programs.</li> <li>- (U) \$395 Completed MNA for systems for destruction of non-emitting surface-to-air targets and investigation of alternatives for incorporation into existing aircraft and munitions programs</li> <li>- (U) \$948 Completed MNA efforts for theater missile defense concepts.</li> <li>- (U) \$158 Completed Mission Area Assessment/Mission Needs Analysis (MAA/MNA) of C4I architectures for Theater Battle Management.</li> </ul>

BUDGET ACTIVITY

PE NUMBER AND TITLE

6 - Management Support

0605808F Development Planning

PROJECT NO. AND NAME

3361 Mission &amp; System Planning

- (U) \$789 Continued surveillance and reconnaissance MNA to identify architecture alternatives to support the battlefield commander.

- (U) \$533 Initiated Integrated Definition for Functional (IDEF) MAA of intelligence systems.

- (U) \$680 Initiated IDEF MAA of combat weather requirements for worldwide Air Force and Army missions.

- (U) \$309 Initiated Future Space Architectures (FSA) studies to support development of Air Force Space Command Mission Area Plans (MAPs).

- (U) \$213 Initiated tool definition for education and training MAAs to include student throughput, technological advances, and force structure changes.

- (U) \$105 Initiated MNA for next generation base operations.

- (U) \$5,911 Total

## (U) FY 1996 (\$ in Thousands):

- (U) \$732 Initiate MAP analysis support to Counterair, Strategic Attack/Interdiction, Theater Missile Defense, and Close Air Support MAPs.

- (U) \$968 Continue surveillance and reconnaissance mission area study to identify architecture alternatives to support the battlefield commander.

- (U) \$664 Initiate Standard Data Base Architecture study to identify and recommend a solution to C4I architecture and database deficiencies stated in the Air Force Special Operations Command MAPs, the Air Force Intelligence Functional Area Plan (FAP), the Air Force C4 FAP, and the Air Force Surveillance and Reconnaissance MAP.

- (U) \$385 Continue Air Education and Training Command mission areas throughput and resource allocation model development.

- (U) \$722 Continue Future Space Architectures (FSA) studies to support development of Air Force Space Command MAPs.

- (U) \$462 Initiate effort to adapt existing air mobility modeling and simulation tools to distributed interactive simulation (DIS) standards to support air mobility MAAs.

- (U) \$395 Initiate a study to determine modeling and simulation (M&S) requirements for Special Operations Forces missions and produce a list of existing M&S tools that can be used as is or modified, or recommend other alternatives as required.

- (U) \$1,078 Complete MAA/MNA of Air Mobility Command's missions to identify requirements for a single, integrated command and control system.

- (U) \$241 Initiate studies on health and safety issues of non-lethal weapons to support Air Force Surgeon General functional area analysis and assessment.

- (U) \$626 Continue IDEF MAA/MNA of combat weather support requirements for worldwide Air Force and Army missions.

- (U) \$222 Initiate study to support MNA for the Special Operations Forces Provide Mobility in Denied Territory mission area.

- (U) \$6,495 Total

## (U) FY 1997 (\$ in Thousands):

- (U) \$1,020 Initiate studies of SOF aircraft mission vulnerabilities and potential countermeasures.

- (U) \$1,600 Continue/initiate efforts in support of Air Combat Command mission areas.

- (U) \$680 Continue throughput and resource allocation studies in support of Air Education and Training Command mission areas.

\* FY96-01 funding was transferred to this account from the environmental compliance program element (65856F).

(U) A. Mission Description and Budget Item Justification

- This program element provides environmental conservation services at three Air Force Material Command Major Range and Test Facility Bases: Eglin AFB, FL; Edwards AFB, CA; and Arnold AFB, TN. The account pays for operations and services (O&S or recurring work to keep the gates open), Level I (work to correct current non-compliance with federal, state or local environmental laws) and Level II (work to correct known future non-compliance) projects. Typical services and projects include: surveying, monitoring and protection of endangered species; environmental assessments and impact analysis; surveying, monitoring and protection of wetlands and floodplains; cultural resources evaluations; and archeological surveys.

(U) FY 1995 Not Applicable(U) FY 1996

- (U) \$4,055 Fund "must pay" O&S requirements such as civilian pay, education and training, updates to integrated natural resources management plans, and environmental impact analysis (EIAP) activities. The EIAP process allows the Air Force to determine the magnitude and significance of the anticipated environment impact of proposed actions.
- (U) \$4,055 Total

(U) FY 1997

- (U) \$7,630 Fund "must pay" O&S requirements such as civilian pay, education and training, updates to integrated natural resources management plans, and environmental impact analysis (EIAP) activities. The EIAP process allows the Air Force to determine the magnitude and significance of the anticipated environment impact of proposed actions.

(U) Change Summary Explanation:	<p>Funding: The funds for this program were transferred from the environmental compliance program (0605956F) in FY95. The program element did not exist prior to this DoD-directed transfer. Congressional programmatic reductions of \$10M are preventing the three RDT&amp;E installations from performing activities to comply with Federal, state, and local environmental laws. These activities are necessary to permit the Air Force to conduct weapon system testing at these installations. The Air Force is exploring various avenues to reprogram funds into this account for FY96. FY97 funding is less than FY96's PB request because of fewer required Level 1 projects.</p> <p>Schedule: <i>Not Applicable</i></p>

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>This program is in budget activity 6 - Management Support because it funds pollution prevention efforts required to accomplish the objectives and subobjectives of the Air Force Pollution Prevention Strategy to include installation level programs at the Research and Development Activities Installations (Eglin, Arnold, and Edwards AFBs) and cross-cutting weapons systems pollution prevention tools such as the integration of life cycle cost evaluations. It also funds efforts to validate and qualify environmentally acceptable materials and processes to replace existing common hazardous materials and processes. The account provides funds for Operations and Services (O&amp;S), Level 1 (ozone depleting chemical and legal requirements), Level 2 (meet future goals, policies, and legal requirements), and Level 3 (beyond goals and legal requirements) projects. Typical project areas include eliminating the use of ozone depleting chemicals and hazardous materials; reducing the generation of hazardous waste, air emissions, and solid wastes; establishing and operating recycling and composting programs; and establishing hazardous material pharmacies and centralized hazardous material tracking. Prior to FY 96, all funding for this program was in program element (PE) 0708054F. To properly realign program funding into the appropriate major force programs and budget activities for the supported installations, additional PEs were established in Jul 94 (mandatory use starting in FY 96). All RDT&amp;E funding in PE 0708054F was then realigned to PE 0605854F.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <table> <tr> <td>- (U) \$0</td> <td>Program element did not exist this fiscal year. (U) A. Mission Description and Budget Item Justification

This program element provides environmental compliance services at three Air Force Material Command Major Range and Test Facility Bases: Eglin AFB, FL; Edwards AFB, CA; and Arnold AFB, TN. The account pays for operations and services (O&S or recurring work to keep the gates open), Level I (work to correct current non-compliance with federal, state or local environmental laws) and Level II (work to correct known future non-compliance) projects. Typical services and projects include: hazardous waste management and disposal; upgrade and removal of underground fuel storage tanks; air and water pollution compliance projects; asbestos abatement and disposal; and polychlorinated biphenyl elimination. Account also funds for environmental sampling and analysis; studies; testing and inspections; permits and fees. Funding for environmental conservation was moved to PE 65853F in FY96 and beyond.

- (U) FY 1995
  - (U) \$24,757 Funded essential "must pay" O&S requirements such as civilian pay, hazardous waste disposal; and environmental permits and fees.
  - (U) \$10,518 Funded Level I (out of compliance) requirements.
  - (U) \$7,100 Funded a limited number of projects classified as Level II (required to meet a known future compliance date). Funding only permitted accomplishment of the most critical of these requirements that would have gone out of compliance during the FY.
  - (U) \$42,375 Total
- (U) FY 1996
  - (U) \$21,753 Fund essential "must pay" O&S requirements such as civilian pay, hazardous waste disposal; and environmental permits and fees.
  - (U) \$3,400 Fund Level I (out of compliance) requirements.
  - (U) \$539 Fund a limited number of projects classified as Level II (required to meet a known future compliance date). Funding will only permit accomplishment of the most critical of these requirements that would go out of compliance during the program FY.
  - (U) \$25,692 Total
- (U) FY 1997
  - (U) \$17,920 Fund essential "must pay" O&S requirements such as civilian pay, hazardous waste disposal; and environmental permits and fees.
  - (U) \$2,900 Fund Level I (out of compliance) requirements.

(U) Change Summary Explanation:	Total	
Funding: From FY96-01 \$14,000,000 per year was transferred from this program element to the environmental conservation program element (65853F) along with the responsibility for compliance with natural and cultural resources laws. Adjustments to FY95 include a general reduction of \$495,000 and a below threshold reprogramming of \$4,000 from PE 65807F. Adjustments to FY96 include a Congressional reduction of \$517,000, small business investment research reduction of \$11,000, and other above threshold reprogramming of \$203,000. FY97 funding is less than FY96's PB request because of fewer required O&S requirements. Adjustments to the budget year are due to lower than anticipated inflation rates.	Cost	TBD

(U) Adjustments to Budget Years Since FY96 PB		11,275		
(U) Current Budget Submit/President's Budget	0	32,808	8,152	Continuing

(U) Change Summary Explanation:

Funding: The FY96 President's Budget funding request covered only booster storage; the increase in FY97 and outyears supports aging surveillance-related activities for stored motors to monitor/ensure the continued safety of stored assets. Congressional FY96 Appropriation included an additional \$16,800 to develop transportable launch and range support instrumentation. Also, \$11,275 appropriated in FY96 to PE 0603851F (BPAC 1023 - RSLP) has been reprogrammed into this PE. FY97-01 has also been adjusted for non-pay inflation.

\* The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming needs (\$-358)

\*\* Includes credit for \$226 for partial payment of General Reductions assessed against Guidance Applications, ICBM Dem/Val Program (PE 0603851F, BPAC 1020)

(U) A. Mission Description and Budget Item Justification: This program element provides basic, essential real property services and base operating support at Eglin AFB, FL; Edwards AFB, CA; and Arnold AFB, TN. The host units for these bases, respectively, are: Air Force Development Test Center (AFDTC), Air Force Flight Test Center (AFFTC) and Arnold Engineering Development Center (AEDC). These host units form the core of the Air Force Test and Evaluation infrastructure belonging to the DoD Major Range and Test Facility Base (MRTFB). These Air Force installations are unique national assets specifically established as part of the MRTFB for test and evaluation. The program finances "quality of life" costs for day-to-day support for these three bases which have over 90 tenant organizations and an aggregate population in excess of 55,000 people. Civilian payroll represents approximately 40 percent of the total program, with the remainder of the program financing administrative support, security and guard services, dormitories, billeting, food services, training, utility operations, civil engineering services, transportation, and motor pools. Functions supported by this program element include comptroller, chaplain, personnel, supply, transportation and information management. Beginning in FY 96, Base Operating Support mission and associated funding (\$26,400) were transferred from PE 65807F (Arnold Engineering Development Center) into 65896F. Purpose of the transfer was to more accurately account for BOS type efforts within PE 65896F at the three AF RDT&E bases. Transfer reflected in previous PB contained errors of approximately \$7-\$10 million/FY. FY96 error (\$9.9 million) was corrected by Congressional mark up of FY96 PB. FY97 and outyears were adjusted for the Current President's Budget submission (FY97-01).

**(U) A. Mission Description and Budget Item Justification:** Finances essential base operating support which includes civilian pay, security and guard services, dormitories, billeting, food services, training, transportation and motor pools, comptroller, chaplain, supply, information management and quality of life services for the three bases. FY 97 increase due to realignment of BOS content and funding from PE 65807F.

## (U) FY 1995 (\$ in Thousands)

- (U) \$35,467 Supported civilian payroll.  
 - (U) \$1,300 Supported mission-related travel.  
 - (U) \$4,200 Supported rental and transportation costs (permanent change of stations [PCS]).  
 - (U) \$5,900 Supported communications systems, tools, contract education, and equipment maintenance.  
 - (U) \$10,000 Supported supplies, fuels, and miscellaneous contract services.  
 - (U) \$3,700 Supported information processing and other equipment, data processing services, and non-flying support of depot-level repairables.  
 - (U) \$60,567 Total

## (U) FY 1996 (\$ in Thousands)

- (U) \$35,270 Supports civilian payroll.  
 - (U) \$1,700 Supports mission-related travel.  
 - (U) \$5,400 Supports rental and transportation costs (permanent change of stations [PCS]).  
 - (U) \$6,900 Supports communications systems, tools, contract education, and equipment maintenance.  
 - (U) \$16,500 Supports supplies, fuels, and miscellaneous contract services.  
 - (U) \$5,817 Supports information processing and other equipment, data processing services, and non-flying support of depot-level repairables.  
 - (U) \$1,311 OSD Withhold.

(U) A. Mission Description and Budget Item Justification

This program is in budget activity 7 - Operational System Development because it supports a currently operational system. The B-52 is the primary nuclear roled bomber in the USAF inventory. It provides the only Air Launch Cruise Missile carriage within the USAF. The B-52 also provides theater CINCs with a long range strike capability. The B-52 is undergoing a Conventional Enhancement Modification which allows it to carry MIL-STD 1760 weapons. The current service life of the aircraft extends past 2030. The Advanced Weapons Integration (AWI) program supports the conventional enhancement of the B-52 through the addition of the Wind Corrected Munitions Dispenser (WCMD), Joint Direct Attack Munition (JDAM), Joint Stand-off Weapon (JSOW), and the Joint Air-to-Surface Stand-off Missile (JASSM). The Air Force Mission Support System supports the Air Force movement of all mission planning to a common system. GPS TACAN Emulation provides support to the Congressionally-directed GPS-2000. Electronic Countermeasures Improvement supports a DESERT STORM identified deficiency. The B-61 Mod 11 program was added at the direction of the Nuclear Posture Review and Presidential Decision Directive-30. The AGM-130 integration is directed by Congressional language. The B-52 program manager is provided by Air Force Material Command's Oklahoma Air Logistics Center. The prime contractor for these projects is Boeing Defense and Space Group.

<p>1. The AFMSS program is organically conducted at OC-ALC/LAS. Previously funded by the AFMSS Program Element.</p> <p>2. The AWI program placed Boeing Space and Defense Group Wichita, KS (BD&amp;SG) on a Cost Plus-Fixed-Fee contract as the Product Development Organization, supported by OC-ALC/LH. Due to the short notice requirement, interface development and initial software requirements definition is being accomplished under the B-52 fleet support contract; a time and materials contract. The first phase will be to support the Direct Attack Stores Management Overlay (SMO) Developmental Test and Evaluation (DT&amp;E) and DT&amp;E of hardware interface equipment. The Direct Attack SMO supports WCMD and JDAM. The second phase will support the DT&amp;E of the Stand-off SMO. The Stand-off SMO supports JSOW and JASSM. Due to the concurrency of the RDT&amp;E program and the need for an early Required Assets Availability (RAA) date, concurrency of the production and RDT&amp;E efforts is required. With no direct aircraft modifications associated with this modification, there is limited risk. Due to this concurrency, the procurement of production hardware and release of formal tech data will be sole source to BD&amp;SG.</p> <p>3. The GPS TACAN program placed Boeing Space and Defense Group, Wichita, KS on a Firm-Fixed-Price contract as the Product Development Organization, supported by OC-ALC/LH, WR-ALC/LKN and OO-ALC/LIH.</p> <p>4. The ECM Improvement program placed Boeing Space and Defense Wichita, KS and ITT Avionics Nutley, NJ on Firm-Fixed-Price contracts as Product Development Organizations. Boeing provides the aircraft specific integration expertise, while ITT provides expertise on the ALQ-172 system. They are supported by OC-ALC/LH and WR-ALC/LNR.</p> <p>5. The Department of Energy is organically conducting the modifications to the B-61 weapon.</p> <p>6. The AGM-130 Integration program placed Boeing Space and Defense Group Wichita, KS on a Firm-Fixed-Price contract as the Product Development Organization, supported by OC-ALC/LH and Rockwell Corporation.</p>

## (U) D. Schedule Profile

The B-52 peculiar mission planning software development is accomplished and delivered incrementally. Each work package within a block build is treated as a mini-development with its own analysis, design, and test. The work packages are integrated with one another and with the AFMSS core. Requirements are continually evolving, however, the program is geared to complete known requirements by Feb 98.

4370	Advanced Weapons Integration	0	3,742	0	0	0	0	0	0	0	3,742
<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>The requirement exists for the integration of near precision and precision guided MIL-STD 1760 weapons on the B-52. This includes the Wind Corrected Munitions Dispenser (WCMD), Joint Direct Attack Munition (JDAM), Joint Stand-off Weapon (JSOW) and the Joint Air-to-Surface Stand-off Missile (JASSM). The B-52 is designated as the bomber test platform for WCMD, JDAM, and JASSM with the objective of meeting aircraft integration and weapon testing requirements. To provide complete understanding of the program and its funding, the following information will reflect the money received from the WCMD, JDAM, and JASSM program elements for weapons integration on the B-52.</p>

4371 Global Positioning System TACAN Emulation	0	9,085	0	0	0	0	0	0	0	9,085

(U) A. Mission Description and Budget Item Justification

GPS TACAN Emulation includes installation of a Control Display Unit (CDU) at the pilot and copilot stations and the integration of current TACAN capabilities into the on-board GPS system. The TACAN Replacement System (TRS) will satisfy current TACAN emulation requirements directed by Congressional mandate and provide an architecture to expand/increase navigational capabilities/requirements planned by FAA and IOAC bodies.

(U) Changes to Current Budget Year	0	0	0	0
(U) Current Budget Submit/President's Budget	0	9,085	0	9,085

(U)	Change Summary	Explanation:

Funding: \$185 taken in FY96 for Undistributed Congressional Reductions.

**Schedule:** Schedule changes were necessary to provide concurrent R&D with GPS Line-Replaceable-Units (LRU) redesign effort. The requirement for 19 additional aircraft to receive NAVSTAR GPS provoked re-design of key Group B LRUs.<sup>7</sup> The TRS new start provided an opportunity to combine the two efforts, reducing additional LRUs originally planned for TRS and incorporating requirements into a single, integrated design. Thus, instead of designing and fielding two separate systems (GPS and TRS), the software and hardware requirements will be integrated. Reducing engineering time and independent costs associated with each program.

**Technical:** Technical changes include eliminating the requirement for a separate Interface Unit for TACAN and integrating TACAN system requirements in the GPS Interface Unit, currently installed on NAVSTAR GPS equipped aircraft. This also eliminates the requirement for a Signal Data Converter to interface the GPS and TRS. The majority of TRS program requirements will affect software integration. The hardware requirements are essentially CDUs at the pilot and copilot positions and associated Group A necessary for installation

7 - Operational System Development

0101113F B-52 Squadrons

PROJECT NO. AND NAME

4493 B-61 Mod 11 Flight Tests

	COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	Cost to Complete	Total Cost
4493 B-61 Mod 11 Flight Tests		0	0	607	0	0	0	0	0	4,518	5,125

**(U) A. Mission Description and Budget Item Justification**

The program involves development and testing of a modified nuclear weapon on B-52 operational aircraft. Replacement of a strategic weapon was recommended by the Nuclear Posture Review and directed by Presidential Decision Directive-30. Congress was notified during the second quarter of 1995, of the Department of Defense, and the Department of Energy intent to modify an existing weapon to provide a replacement option. Modifications (made by the Department of Energy) to the B-61 Mod 7 strategic bomb accomplish the mission requirements of the replaced weapon. Modification of an existing weapon is less expensive than the cost to develop a new weapon from "scratch." Flight testing by the 419th FLTS, Edwards AFB, CA is required to certify the modified weapon mass and physics properties are the same as the Mod 7 device. Program Budget Decision (PBD) 632 "Congressional Adjustments to Air Force Investment Appropriations stated that "since the Air Force does not have a documented requirement for the AGM-130 effort, and has not funded this effort, the \$4.5M added by Congress in FY96 can be used to finance FY1997 B-52 development program requirements." Therefore \$4.5M is deleted from the FY1997 budget. The money was taken from modification 4493 "B-61 Mod 11 Flight Tests. The following funding stream reflects the required program funding. Only flight testing of the DOE provided weapons can be performed with the remaining \$607K.

**(U) A. Mission Description and Budget Item Justification**

The ACM is a low-observable, air-launched, strategic missile with significant improvements over the ALCM-B in range, accuracy, and survivability. Armed with a W80 warhead, it is designed to evade air and ground-based defenses in order to strike heavily defended, hardened targets at any location within any potential enemy's territory. The ACM is designed for B-52H external carriage. Missile procurement is complete. FY 96, FY 97 and FY98 funds are required to complete the last 15% of mission support development work. This program is in budget activity 7, Operational System Development, because the program effort involves depot development.

**(U) FY 1996 (\$ in Thousands):**

- (U) \$2,197	Complete Sensor Depot Development
- (U) \$1,539	Continue Software Depot Development

**(U) A. Mission Description and Budget Item Justification**

The Joint Surveillance System (JSS) provides command, control and communications (C<sup>3</sup>) capability in support of NORAD's Atmospheric Tactical Warning and Attack Assessment (ATW/AA) air sovereignty, and air defense requirements. The JSS Connectivity (JSS-C) program provides improvements to this capability by integrating new sensor data and enhancing communications capabilities via the Advance Interface Control Unit (AICU). The Region and Sector Operations Control Center (R/SOCC) Modernization program will provide a modernized C4I system with enhanced capability to integrate data from existing and future civil and military defense surveillance systems into a comprehensive recognized air picture to enhance NORAD's capability to conduct peacetime air sovereignty, transition and conventional warfare in the event of aggression toward the North American Continent. The current system has reached saturation in its capability to receive, process, display, exchange, and employ air surveillance data from current sensor systems. In some cases, it has exceeded processing and displaying capacity, thus contributing to delayed C4I decisions. The outdated technology has become increasingly difficult and costly to maintain. The FAA/Air Force Radar Replacement (FARR) program will replace 40 existing JSS radars with solid-state, three-dimensional ARSR-4 radars to improve mission performance and reduce operation and maintenance costs. The JSS-C portion of this PE falls under Budget Activity 7 research category 6.7 Operational System Development, as it is a system being deployed to the operational community to solve an operational deficiency in the existing operational system and is post Milestone Three. The FARR portion of this program element also falls under Budget Activity 7 Operational System Development as it has received approval for production.

## (U) Acquisition Strategy:

Management for the R/SOCC Modernization is by ESC, AFMC, Hanscom AFB, MA. The R/SOCC Modernization acquisition is currently being refined in preparation of the MS II decision. Development of the system will be executed through full and open competition. Management of the JSS Connectivity is by the Electronic Systems Center, Air Force Materiel Command, Hanscom AFB, MA. The prime contractor for the AICU is TRW, Aurora, CO. Enhanced Traffic Management System (ETMS), Department of Transportation, Cambridge, MA provides the AICU with flight plan information from FAA sources. The Federal Aviation Administration (FAA) is the lead acquisition agency for the FAA/AF Radar Replacement Program in accordance with a 19 November 1984 sub-agreement (as amended by Amendment 1, dated 1 September 1988) to FAA/AF National Agreement (NAT) 711. The FAA and the Air Force have established a joint Program Office at HQ, FAA, Washington, DC for this procurement. Westinghouse Corporation, Linthicum, MD is the prime contractor for the FARR program.

2710 North Warning System (NWS)		1,991	982	0	0	0	0	0	0	12,742	
<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>This program provides air surveillance capability and tactical warning of bomber or cruise missile attack against the North American continent through a Distant Early Warning (DEW) Line extending from Alaska to Labrador. This warning provides the National Command Authorities with time for decision making and survival actions, permitting the launch of strategic retaliatory and command and control aircraft for survival, as well as the ability to alert air defense fighters to intercept attacking aircraft. Due to its age (1957 initial deployment), the DEW Line is increasingly difficult and costly to operate and maintain. The North Warning System (NWS) program replaces the aging DEW Line and will eliminate low-altitude coverage gaps, improve radar performance, and reduce operation and maintenance costs. RDT&amp;E funds provide for the deployment, installation, integration and testing of Unattended Radars (UARS) and Minimally Attended Radars (MARS) in order to provide tactical warning/attack assessment for northern air attack approaches to North America. RDT&amp;E funds also support development kits to correct spectrum prototype as other residual activities. The continuing requirement for NWS coverage was revalidated by CINCNORAD in FY93. The NWS is a joint US/Canadian program. The program is funded in Budget Activity 7 as it supports upgrades to the currently operational system.</p>

(U) A. Mission Description and Budget Item Justification

(U) This program provides funds to develop improved systems for the F-111F/EF-111A aircraft. These improvements maintain the weapon system as a safe, reliable, and maintainable aircraft. The F-111F fleet will be retired in FY96. The EF-111A is programmed to be retired in FY98. Requested funds complete corrections to flight discrepancies on safety modifications and pay RDT&E related termination costs. This program is Operational System Development because it develops upgrades to an operational system.

DATE

March 1996

BUDGET ACTIVITY

PE NUMBER AND TITLE

## 7 - Operational System Development

0207129F F-111 Squadrons

## (U) Change Summary Explanation:

Funding: Of the \$4.671 million appropriated in FY95 for the F/EF-111 program, \$4.422 million was available after adjustments. Based on early Congressional language, \$852,000 was initially placed on Air Force Withhold for safety modifications. Subsequent Congressional language stated \$1.254 million would be unencumbered by any restrictions. That money was obligated on three projects within the F/EF-111 program. Currently, \$3.169 million has been placed in Air Force Withhold to be used only for safety modifications for the F/EF-111 aircraft. These funds can be used only after justification is provided to Congress by the Secretary of the Air Force.

1) Back Injury Reduction Program (BIRP) was fully funded with FY94 dollars except \$19,000 FY95 money used to support testing and conduct final briefings to ACC.

2) Stores Management System (SMS) program was terminated upon notification F-111F would be retired. Program termination actions resulted in decreased funding requirements.

3) Digital Flight Control funding increased initially as a result of changes required to resolve problems identified in DT&E. Money appropriated within the F/EF-111 program for SMS and BIRP was shifted to DFCS. Because of Congressional restrictions, the DFCS program in FY95 was adjusted to reflect the restrictions. \$1.067 million has been obligated for DFCS in FY95. In addition, \$3.169 million has been placed in Air Force Withhold pending requirement for safety modifications

Schedule: N/A

Technical: DFCS incorporates a hardware/software change which improves the Ground Collision Avoidance System characteristics in the F-111/EF-111. Additionally, there are several improvements to self-test and fault monitoring functions. Scope of this engineering change reduced to absolute minimum due to impending weapon system retirement.

<p>Funding: Digital Flight Control System (DFCS) funding increased as a result of changes required to resolve problems identified in DT&amp;E. Of the \$1.254 million FY95 money unencumbered by Congress, \$1.067 million was programmed for DFCS. Funding request includes estimate of program termination costs.</p> <p>Schedule: See below</p> <p>Technical: Additionally, there are several improvements to self-test and fault monitoring functions. Scope of this engineering change reduced to absolute minimum due to impending weapon system retirement.</p>

**(U) A. Mission Description and Budget Item Justification**

(U) The F-16 fighter aircraft program satisfies the need for modernization of the USAF and allied multi-mission tactical fighter forces. The F-16 is a single-engine, single-seat, multirole tactical fighter with full air-to-air and air-to-surface combat capabilities. The F-16 complements the F-15 in counter-air missions and as the primary aircraft in the surface attack role. The F-16C/D program develops, integrates, and qualifies systems to enhance the overall performance of the F-16 mission.

(U) The F-16 program also develops enhanced combat capability in both the air-to-ground and air-to-air role. Improvements (all within the FYDP) include completion of the Mid-Life Update (MLU) Program, the Modular Mission Computer (MMC), Block 30 GPS Integration, Smart Weapons Integration, and Pratt & Whitney 229 Engine design improvements. The planned program also develops Close Air Support (CAS) enhancements for 250 Block 40 C/D by integrating Night Vision lighting and Alternate VHF Antenna. The F-16C/D development efforts are complemented by comprehensive Operational Flight Program (OFP) upgrades.

(U) To meet the need beyond the turn of the century, a Mid-Life Update (MLU) of aircraft avionics is being conducted by our European partners. MLU involves various mods to European F-16A/B, including the Modular Mission Computer (MMC), which USAF Block 50s will eventually employ. The MMC will extend the cost effective life of the F-16 through replacement of three Line Replaceable Units and the addition of significant memory and processing growth provisions. The latest version of the F-16C/D has significantly improved display processors, enabling increased pilot situational awareness. Efforts are underway to upgrade the IDM data link capability on the Block 50 aircraft with the latest version of the High Speed Anti-Radiation Missile (HARM). The program includes enhancements to the HARM Targeting System to enable the F-16 Block 50 to better perform in the Suppression of Enemy Air Defenses role.

(U) The F-16, which received Milestone III approval in FY 1977, is an operational aircraft. Since the development activities in this PE support an operational aircraft, these development activities are funded in the Operational System Development budget activity seven.

(U) A. Mission Description and Budget Item Justification - Continued

(U)	FY 1997	Complete Mid-Life Update Engineering and Manufacturing Development (EMD)
-	(U) \$2,680	Continue Modular Mission Computer
-	(U) \$16,700	Continue F-16 Close Air Support EMD
-	(U) \$16,538	Continue Block 30 Global Positioning System
-	(U) \$7,940	Continue Smart Weapons integration
-	(U) \$12,020	Continue Operational Flight Program
-	(U) \$55,193	Continue Flight Tests Developmental Test & Evaluation
-	(U) \$26,700	Other (See R-3)
-	(U) \$4,431	Total
-	(U)	
	\$142,202	

**(U) B. Program Change Summary (\$ in Thousands)**

	FY 1995	FY 1996	FY 1997	Total
(U) Previous President's Budget	134,236	175,600	152,785	Cost
(U) Appropriated Value	-	175,600		TBD
(U) Adjustments to Appropriated Value	138,657	175,600		
a. Below Threshold Reprogrammings	-1,009			
b. General Congressional Reductions	-1,528	-3,439		
c. Small Business Innovative Research (SIBR)	-2,893	-4,221		
d. Bosnia Bill		-1,876		
e. Recission (F-16s to Jordan)		-1,834		
(U) Adjustments to Budget Since FY96 PB				
a. O&M Reduction			-761	
b. Electronic Combat Integrated Test Facility			-1,300

(U) **A. Mission Description and Budget Item Justification**

(U) The F-15E is the most versatile fighter in the world today. Configured with conformal fuel tanks (CFTs), the F-15E can deploy worldwide with minimal tanker support and arrive combat-ready. The F-15E retains air superiority capability and adds systems, such as Low Altitude Navigation Targeting Infrared for Night (LANTIRN), to meet the requirement for all-weather, deep penetration, and night/under-the-weather, air-to-surface attack. However, the threat includes a new generation of aircraft possessing all-weather detection and kill capabilities. The F-15E's avionics, armament, airframe, and engines must be improved to maintain its superiority against the threat into the next century. Avionics updates, exploiting proven technological advances, are being incorporated into the F-15E providing expanded capability and supporting an updated and fully integrated electronic warfare suite. As a result, this project develops enhanced offensive and defensive capability and survivability. Additionally, overall combat capability is increased by integration of a Very High Speed Integrated Circuit (VHSIC) Central Computer (CC). (The F-15E PE also funds RDT&E activities for PE # 0207130, F-15A-D). The F-15E, which received contract award approval in FY84, is an operational aircraft and therefore the development activities in the PE are included in Budget Activity 7, Operational Systems Development.

(U) **FY 1995**

- (U) \$3,808 Continue development and testing of the improvements initiated in FY 1994 and prior.
- (U) \$57,540 Continue development and testing of F-15 improvements including ECCM, GPS, APG-63 radar, and VHSIC.
- (U) \$1,357 Continue R&D engineering efforts to support F-15E AJSF.
- (U) \$8,228 Provide program office support.
- (U) \$29,488 Continue development and flight test of the OFP and flight testing of improvements initiated in prior years.
- (U) \$2,220 Continued improvements to -229 engine.
- (U) \$5,970 Software development, airframe component qualification, and flight test preparation for GE-129 engine.
- (U) \$108,611 Total

**(U) A. Mission Description and Budget Item Justification**

This program funds the development and procurement of the Air Force's Manned Destructive Suppression of Enemy Air Defenses (SEAD) capability. The AGM-88 High-Speed Anti-Radiation Missile (HARM) is the primary weapon for SEAD. The program allows certain F-16 aircraft to carry and employ the HARM. The Block 50 F-16C has been modified to carry the AN/ASQ-213 HARM Targeting System (HTS). This system allows real-time, "range known" HARM employment. This capability is necessary due to the phase out of the F-4G Wild Weasel. The F-15 was to be modified with the Precision Direction Finding (PDF) system, but this effort was terminated in the FY96 BES due to fiscal constraints and better than expected capability reports from units equipped with the fielded F-16 HTS. Also, the Air Force began studying the Preemptive Destruction of Enemy Air Defenses in Jan 94 under PE 0605808F, Development Planning. The Preemptive Destruction program evaluates weapons and decoys that aid in the destruction of enemy air defenses before they can engage friendly aircraft. The program is scheduled for a Milestone I/II review in 3Q FY97. Because this program element provides for the development of upgrades for the F-15 and F-16 (both are operational weapons systems that have received Milestone III approval) funding is included in the Budget Activity/Research Category Operational Systems Development.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	March 1996																																												
BUDGET ACTIVITY		PE NUMBER AND TITLE																																													
7 - Operational System Development		0207136F Manned Destructive Suppression																																													
<p>(U) <b>B. Program Change Summary (\$ in Thousands) - (Continued)</b></p> <p>(U) Change Summary Explanation:</p> <p>Funding: The Air Force increased funding to upgrade the F-16's HARM Targeting System (HTS). Congress also increased the PE's appropriation by \$8,000,000 during the FY96 Appropriations Conference: \$5,000,000 for Light Defender and \$3,000,000 for the HTS upgrade.</p> <ul style="list-style-type: none"> <li>HTS: The AF increased RDT&amp;E funding \$31,000,000 beginning in FY97 to upgrade the F-16 HTS. Congress approved an \$11,100,000 transfer from the F-15 MDS project and added \$3,000,000 to the AF's FY96 PB to allow the AF to begin the HTS upgrade in Feb 96. Estimated total RDT&amp;E for the HTS upgrade is \$45,000,000.</li> <li>Light Defender: Light Defender will be evaluated as a foreign comparative test under PE 0605130D. This project was initially funded in FY95 as part of the Preemptive Destruction project using funds from the terminated F-15 Manned Destructive Suppression project. Congress increased the FY96 PB \$5,000,000 to expand the scope of the Light Defender foreign comparative test to include operational testing.</li> </ul> <p>Schedule:</p> <ul style="list-style-type: none"> <li>AF began an HTS upgrade in Feb 96. AF linked the HTS upgrade to the F-16 Operational Flight Program (OFF) schedule to achieve HTS IOC in FY99.</li> <li>Light Defender test planning began in Sep 95, and testing is expected to continue through mid-late FY97.</li> <li>AF terminated the F-15 MDS production program in Jul 95. A restructured F-15 Dem/Val was awarded Mar 96 to provide risk reduction information for other suppression programs such as the Navy's competition for a Joint Emitter Targeting System. The restructured Dem/Val expects to complete in 4Q FY96</li> </ul> <p>Technical: The AF completed the technical evaluation of HTS upgrade options in Jun 95 and began the HTS upgrade in Feb 96. The AF also returned the sustaining engineering costs mistakenly dropped during the 96 President's Budget to provide continued integration of HTS for minor HTS or F-16 software updates.</p> <p>(U) <b>C. <p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The Manned Destructive Suppression (MDS) program provides funds for the development and procurement of the Air Force's planned systems to suppress enemy air defenses. The AGM-88 High-Speed Anti-Radiation Missile (HARM) is the primary weapon for MDS. This project provided the F-15 aircraft the capability to carry and employ the HARM. This capability was necessary due to the phase-out of the F-4G Wild Weasel. The F-15 was to be modified with a Precision Direction Finding (PDF) system to allow real-time HARM employment. This effort was terminated due to fiscal constraints and better than expected capability reports from units equipped with the fielded F-16 HARM Targeting System.</p> <p>Project Type New Start X Termination Not Applicable</p> <p>(U) FY 1995 Complete PDF Demonstration/Validation.</p> <p>(U) \$14,565 Initiated Programmable Armament Control Set (PACS) upgrade portion of the HARM Integration project. Effort Completed in PE 0207134F</p> <p>(U) \$7,000 Started PDF COEA but redirected efforts to F-16 alternatives studies and the Navy's Joint Emitter Targeting System COEA</p> <p>(U) \$1,896 Mission Support.</p> <p>(U) \$750 Project Subtotal</p> <p>(U) \$24,211 Initiated Light Defender Foreign Comparative Test</p> <p>(U) \$922 Realigned with HARM Targeting System to accelerate the HTS Upgrade.</p> <p>(U) \$11,100</p> <p>(U) \$36,233 Total</p> <p>(U) FY 1996: Not applicable (PACS Upgrade continues and is transferred to PE 0207134F, F-15E Squadrons)</p>

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The program provides F-16 aircraft the capability to carry and employ the AGM-88 High-speed Anti-Radiation Missile (HARM). The Block 50 F-16C has been modified to carry the AN/ASQ-213 HARM Targeting System (HTS). This capability allows real-time, "range known" HARM employment. Because of the phase out of the F-4G Wild Weasel the F-16 has become the USAF's only platform for employing the HARM in the lethal SEAD mission. The HTS was fielded in FY94. This project develops performance upgrades and funds integration effort to remain compatible with the F-16C and associated support and training equipment.</p> <p>Project Type New Start Termination X Not Applicable</p> <p>(U) <u>FY 1995</u>            - (U) \$11,100 Realigned from F-15 MDS project 4375. **(U) A. Mission Description and Budget Item Justification**

The F-117A is the world's only operational low-observable (LO) combat aircraft. Its combination of stealth and precision weapons delivery capability allows the United States Air Force to hold even the most highly defended targets at risk. This program provides funds to develop improved systems for the F-117A aircraft. These improvements will enhance combat capability while maintaining a safe, reliable, and supportable aircraft. The F-117A is currently planned to be in service at least through the year 2015. The major research budget activity category is operational systems development; in addition, some research being performed is engineering and manufacturing development (EMD). The final F-117A delivery to the Air Force (number 59) was July 1990. The program is well past production; currently the single operational F-117A unit is stationed at Holloman AFB. The program uses Aircraft Procurement Air Force (APAF) modification (BA-5) money for an extensive modification program to keep the F-117A current with operational system and reliability/maintainability upgrades. Some of the modification projects require development efforts before they are integrated into the fleet (RDT&E money). In addition, small amounts of F-117A RDT&E funding, support quick look integration, threat system, and technology quick look studies as required by the user. This program is in budget activity 7 - Operational System Development, because all aircraft have been delivered and program is now in its deployment phase.

This project currently provides research and development for multiple modifications for the F-117A weapons system. The first FY 97 RDT&E effort continues the development work for the MIL-STD-1760 Stores Management Processor. This modification will enable the platform to integrate advanced weapons such as the Joint Direct Attack Munition (JDAM) & the Wind Corrected Munitions Dispenser (WCMD). The second FY 97 RDT&E sub-project will continue development of new spray coating application techniques and panel access technologies to improve the reliability and maintainability of the weapon system. This modification will allow the weapon system to move towards a single configuration for all F-117 airframes. This sub project will also include efforts to move the weapon system towards a single configuration of leading edges compatible with the overall Low Observable aircraft system. The next modification will develop a new fuel tank inerting system which will conform to environmental standards. The current aircraft inerting system uses halon, an ozone layer depleting chemical which is being withdrawn from service.

1006 Tri-Service Standoff Attack Missile (TSSAM)	17,670	0	0	0	0	0	0	0	17,670

(U) A. Mission Description and Budget Item Justification

The Tri-Service Standoff Attack Missile (TSSAM) was a joint service program with the Air Force as the lead service. The program objective was to develop a family of highly survivable, conventional, stealthy cruise missiles to satisfy tri-service requirements to effectively engage a variety of high value land and sea targets. The technical approach to develop a modular stealth cruise missile which can employ several payloads and guidance systems to engage the required targets. All variants used a GPS aided inertial navigation system. The Navy and Air Force (unitary variant) missiles used an imaging infrared terminal sensor for autonomous recognition and homing on fixed land targets and sea targets. The other Air Force variant contained the Combined Effects Bomblet (CEB) submunition to attack land targets. Integration efforts were planned for the Air Force's B-52H, F-16C/D, B-1 and B-2 and the Navy's F/A-18C/D. On 9 Dec 94 SECDEF announced cancellation of the TSSAM program. DEPSECDEF Program Decision Memorandum (PDM) IV, 16 Dec 94, canceled the TSSAM and associated contracts. The terminated program is described herein.

NOTE: Program termination costs are ongoing.

NOTE: Many TSSAM program specifics remain SECRET -Special Access Required per the 31 March 1993 Program Security Guide. Separate justification will be provided to appropriately cleared individuals.

NOTE: FY 1995 and prior year funding appropriated and consolidated with Navy funding in Defense Agencies Program Element #0603715D.

(U) A. Mission Description and Budget Item Justification

The AIM-9 Sidewinder short-range air-to-air missile (SRM) is a launch and leave, air combat munition that uses passive infrared (IR) energy for acquisition and tracking of enemy aircraft and complements the Advanced Medium Range Air-to-Air Missile. Air superiority in the SRM arena is essential and includes first shot, first kill opportunity against an enemy employing IR countermeasures. The AIM-9X is a long-term evolution to the AIM-9, a fielded system, qualifying this as research category operational systems development. Evolutionary improvements in missile seeker, fuze, and kinematics allow retrofit of components to current missiles to the maximum extent possible. Retrofitting of components will extend the operational effectiveness of existing inventories at an affordable cost while continuing evolution of the AIM-9 series. This program is in budget activity 7 - Operational System Development because it is an evolutionary improvement to a fielded missile system.

		300,622
* NOTE: FY 1995 and prior years appropriations were consolidated with Navy funds into the Defense Agencies Program Element #0603715D.		
(U) Change Summary Explanation:		
Funding: The OSD CAIG report dated November 1994 indicated that the joint program office underestimated contractor costs for AIM-9X Demonstration and Validation. This variance was due to significant differences between the CAIG and program office methodologies for estimating AIM-9X seeker costs. It was agreed that each service, Air Force and Navy, would increase their FY 97 program by \$7 million each. Reductions for higher priority Air Force requirements (-\$155,000) and inflation adjustments (-\$1,551,000) resulted in a net increase of \$5,294,000 in FY 97. FY 96 Reprogrammings include -\$206,000 for Bosnia and -\$210,000 for F-16s to Jordan.

0207160F Tri-Service Standoff Attack Missile (TSSAM)

PROJECT NO. AND NAME

1006 Tri-Service Standoff Attack Missile (TSSAM)

COST (\$ In Thousands)	FY 1995 Actual	1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1006 Tri-Service Standoff Attack Missile (TSSAM)	17,670	0	0	0	0	0	0	0	17,670

(U) A. Mission Description and Budget Item Justification

The Tri-Service Standoff Attack Missile (TSSAM) was a joint service program with the Air Force as the lead service. The program objective was to develop a family of highly survivable, conventional, stealthy cruise missiles to satisfy tri-service requirements to effectively engage a variety of high value land and sea targets. The technical approach to develop a modular stealth cruise missile which can employ several payloads and guidance systems to engage the required targets. All variants used a GPS aided inertial navigation system. The Navy and Air Force (unitary variant) missiles used an imaging infrared terminal sensor for autonomous recognition and homing on fixed land targets and sea targets. The other Air Force variant contained the Combined Effects Bomblet (CEB) submunition to attack land targets. Integration efforts were planned for the Air Force's B-52H, F-16C/D, B-1 and B-2 and the Navy's F/A-18C/D. On 9 Dec 94 SECDEF announced cancellation of the TSSAM program. DEPSECDEF Program Decision Memorandum (PDM) IV, 16 Dec 94, canceled the TSSAM and associated contracts. The terminated program is described herein.

NOTE: Program termination costs are ongoing.

NOTE: Many TSSAM program specifics remain SECRET -Special Access Required per the 31 March 1993 Program Security Guide. Separate justification will be provided to appropriately cleared individuals.

NOTE: FY 1995 and prior year funding appropriated and consolidated with Navy funding in Defense Agencies Program Element #0603715D.											
(U) A. <u>Mission Description and Budget Item Justification</u>											
The AIM-9 Sidewinder short-range air-to-air missile (SRM) is a launch and leave, air combat munition that uses passive infrared (IR) energy for acquisition and tracking of enemy aircraft and complements the Advanced Medium Range Air-to-Air Missile. Air superiority in the SRM arena is essential and includes first shot, first kill opportunity against an enemy employing IR countermeasures. The AIM-9X is a long-term evolution to the AIM-9, a fielded system, qualifying this as research category operational systems development. Evolutionary improvements in missile seeker, fuze, and kinematics allow retrofit of components to current missiles to the maximum extent possible. Retrofitting of components will extend the operational effectiveness of existing inventories at an affordable cost while continuing evolution of the AIM-9 series. This program is in budget activity 7 - Operational System Development because it is an evolutionary improvement to a fielded missile system.

<p>* NOTE: FY 1995 and prior years appropriations were consolidated with Navy funds into the Defense Agencies Program Element #0603715D.</p>																																										
<p>(U) Change Summary Explanation:</p> <p>Funding: The OSD CAIG report dated November 1994 indicated that the joint program office underestimated contractor costs for AIM-9X Demonstration and Validation. This variance was due to significant differences between the CAIG and program office methodologies for estimating AIM-9X seeker costs. It was agreed that each service, Air Force and Navy, would increase their FY 97 program by \$7 million each. Reductions for higher priority Air Force requirements (-\$155,000) and inflation adjustments (-\$1,551,000) resulted in a net increase of \$5,294,000 in FY 97. FY 96 Reprogrammings include -\$206,000 for Bosnia and -\$210,000 for F-16s to Jordan.</p> <p>Schedule: None</p> <p>Technical: None</p>

7 - Operational System Development

0207163F Advanced Medium Range Air-to-Air Missile

PROJECT NO. AND NAME

3777 AMRAAM

## (U) FY 1997 (\$ in Thousands):

- (U) \$20,361 Continue Phase 2 EMD for ECCM, weapons effectiveness, and kinematic improvements.
- (U) \$5,522 Continue Phase 3 risk reduction to enhance ECCM and guidance, and prepare for FY98 EMD.
- (U) N/A Continue Navy participation in AMRAAM P3I Phase 2 program with emphasis on Navy unique requirements and aircraft integration compatibility (Funded by USN)
- (U) \$25,883 Total

## (U) B. Program Change Summary (\$ in Thousands)

	FY 1995	FY 1996	FY 1997	Total Cost
(U) Previous President's Budget	68,467	42,311	49,232	716,579
(U) Appropriated Value		47,311		
(U) Adjustments to Appropriated Value				
a. Cong Gen Reductions		-926		
b. SBIR		-991		
c. Omnibus or Other Above Threshold Reprogram		-981		
d. Below Threshold Reprogramming	-4,612		-23,349	
(U) Adjustments to Budget Years Since FY 1996 PB			25,883	
(U) Current Budget Submit/President's Budget	63,855	44,413		702,937

## (U) Change Summary Explanation:

Funding: FY96 Congressional appropriation increased FY96 (+\$5,000) for Phase 3 risk reduction. In addition, FY96 funding was reprogrammed to support Bosnia (-\$487) and F-16s to Jordan (-\$494). Funds were realigned from FY97 (-\$22,000) to FY98 (+\$22,000) to align funding with program execution. FY97 was also reduced by an inflation rate adjustment (-\$1,104) and O&M Reductions (-\$245).

Schedule: Phase 2 Tape 7A PDR/CDR and FCA(A) have been completed on schedule, and FCA(A) remains on schedule. Tape 7A will be introduced in AIM-120C production in Lot 9 (CY97 deliveries) and will be reprogrammed into Lot 8 AIM-120C missiles. Phase 2 Tape 7B PDR/CDR and FCA(B) have been rescheduled to allow for complete integration of the improved (+5 inch) rocket motor. Tape 7B PDR, originally scheduled for Nov 95, was completed in Feb 96; Tape 7B CDR has been rescheduled from Jun 96 to Oct 96; and FCA(B) has been rescheduled from Mar 98 to Sep 98. These dates still support production

**(U) A. Mission Description and Budget Item Justification**

(U) The Podded Reconnaissance System (PRS) provides a responsive "under-the-weather" reconnaissance capability to support intelligence and targeting requirements of military, multinational, and other government agency users. It will provide a dedicated, on-demand, day/under-the-weather, selective aspect, literal imagery collection capability. It is intended to fill the high-threat, under-the-weather niche that cannot be accomplished by existing collectors such as space systems, Unmanned Aerial Vehicles, and the U-2. The PRS supports Combat Air Force (CAF) Mission Need Statement 328-93, Theater Airborne Reconnaissance System.

(U) PRS will consist of 20 podded systems with embedded electro-optical (EO) sensor suites, five transportable Squadron Ground Stations, logistics support, and spares. Furthermore, this project includes tasks to develop and integrate the PRS on Air National Guard F-16C Block 30 aircraft. The PRS Initial Configuration Criteria (ICC) system will provide a single forward looking EO framing sensor, sensor control, second sensor window, data recording, and internal pod environmental control. The pod will interface with the F-16 cockpit Electronic Warfare Management System. The ICC system will also provide space and environmental control required to implement the Final Configuration Criteria (FCC) capabilities consisting of a second vertical/oblique EO sensor and provisions for a P31 (Pre-Planned Product Improvement) Common Data Link. FCC capability will be based on the integration of a Navy/Marine production Medium Altitude EO sensor.

(U) The PRS program is in Budget Activity 7, Operational System Development, because the development activities in this PE will integrate currently available low-risk technologies (commercial/government off-the-shelf sensors, pods, etc...) into operational platforms.

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>Air Force TENCAP is a Congressionally directed program to provide the Tactical Exploitation of National Capabilities (TENCAP). The objective of TENCAP is to improve warfighting capabilities and effectively leverage the billions invested in our national systems for the warfighter. TENCAP expedites improvements to Air Force combat capabilities by performing operational concept demonstrations with rapid prototyping. Therefore, TENCAP is not a developmental program per normal acquisition guidelines. However, TENCAP does support future operational systems development. To enhance combat effectiveness, TENCAP will focus in three areas:</p> <p>(U) 1) Exploit existing national systems for the tactical warfighter (TENCAP will conceive and demonstrate capabilities to exploit national systems).</p> <p>(U) 2) Educate warfighters about national systems capabilities (in the form of training, exercises, and readiness activities).</p> <p>(U) 3) Influence the design and operation of new national systems for the warfighter by advocating tactical impacts of the new systems (in the form of analysis and integration of national systems into roadmaps and architectures for Air Force weapons/C<sup>3</sup>I systems).</p> <p>Since this effort supports fielded systems, it is in the budget activity #7 Operational Systems Development.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$21,882 Exploited the tactical use of existing national systems for the warfighter in six Talon areas.</li> <li>- --Talon Command (Support command and control)</li> <li>- --Talon Ready (Support mission planning)</li> <li>- --Talon Shooter (Support for weapons delivery)</li> <li>- --Talon Knight (Support Special Operations)</li> <li>- --Talon Touch (Disseminate TENCAP information)</li> <li>- --Talon Vision (Integrate real-time national system information)</li> <li>- Training, education, exercises and readiness of national systems</li> <li>- (U) \$300 Program support and related efforts to influence and impact of new national systems</li> <li>- (U) \$1,050</li> <li>- (U) \$23,232 Total</li> </ul>

<p><b>*0604268 in FY 95 in BA5</b></p> <p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>CIP provides critical sustaining engineering support (only source) for in-service Air Force engines to maintain flight safety (highest priority), to correct service revealed deficiencies, to improve system Operational Readiness (OR) and Reliability and Maintainability (R&amp;M), to reduce engine Life Cycle Cost (LCC), and to sustain engines beyond their estimated life. Historically, aircraft systems change missions, tactics, and environments to meet changing threats throughout their lives. Numerous new problems can develop in the engines through actual use during deployment, production, and service, and CIP provides the only funds to develop fixes for these field problems. CIP starts with delivery to the user of the first system (aircraft + engine) purchased with procurement funds and continues over the engine's life, gradually decreasing to a minimum level (safety/depot repairs) sufficient to keep older inventory engines operational. CIP addresses out-of-warranty usage and life and enables the Air Force to obtain additional warranties when manufacturers incorporate CIP improvements into production engines. Since operational and safety problems arise throughout a system's service life, CIP must be maintained at a level to provide the engineering support to make the changes essential for continued satisfactory system performance at affordable costs. CIP ensures continued improvements in engine R&amp;M factors, which reduce outyear support costs. Historically, R&amp;M related CIP efforts reduce outyear Operations and Maintenance (O&amp;M) and spares costs by a ratio greater than 21 to 1. O&amp;M and spares budgets assume a viable CIP effort is in place. Without the outyear cost avoidance provided by CIP, outyear support costs would have to be increased drastically. CIP funding is driven by field events and types/maturity of engines, not by the total engine quantity. This program is in budget activity 7 - Operational System Development, Research Category 6.6 beginning in FY97 because all efforts support fielded systems.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <table> <tr> <td>- (U)</td> <td>Continued efforts to increase engine operability and supportability, reduce air aborts, aircraft safety incidents, non-mission capable rates, scheduled and unscheduled engine removals, maintenance man hours, and overall costs. (U) **A. Project Cost Breakdown (\$ in Thousands):** A project cost breakdown is not applicable to this Program, because there are no individual projects, but several hundred independently managed tasks. The bulk of the funding goes to the major engine manufacturers. The FY96 costs are broken down as follows. Cost breakdown for follow-on years is expected to be of similar proportions.

	FY95	FY96	FY97
Contracted Tasks:	\$ 83,316	\$107,463	\$ 83,296
AFFTC Flight Tests:	1,445	2,016	3,020
AEDC Altitude Tests:	4,492	9,568	4,904
Petroleum/Oil/Lubricants:	2,184	4,748	6,530
Mission Support:	939	916	1,300
PE TOTAL	92,376	124,711	99,050

(U) **B. Budget Acquisition History and Planning Information (\$ in Thousands):** CIP contracts are awarded on a calendar year basis; normally in January of each year. The contract to Boeing is for the re-engining of RC-135 RIVET JOINT aircraft.

0207412F Theater Air Control System

PROJECT NO. AND NAME

485L Ground Theater Air Control Sys (GTACS)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
485L Ground Theater Air Control Sys (GTACS)	6,555	242	622	723	802	826	836	Continuing	TBD

(U) A. Mission Description and Budget Item Justification

Ground Theater Air Control System (GTACS) provides the means through which the Air Component Commander exercises control of his forces to accomplish his assigned mission. This program provides for major improvements to the existing Tactical Air Control System (TACS) which was designed in the 1960s and is now unsupportable. The GTACS RDT&E program consists primarily of the Modular Control Equipment (MCE) Pre-Planned Product Improvements (P3I) program which replaces obsolete equipment (operator consoles, shelters, computers, radios, etc.) in the GTACS. The modernization upgrades C2 interoperability, flexibility, mobility, communications and worldwide operations. The P3I program is structured into multiple phases. Phase one consisted of the integration of secure anti-jam UHF radios, an upgrade to the weapons control and Joint Tactical Air Operations data link software (S/W), and development of a Chemical, Biological and Radiological protection capability. These improvements have already been incorporated into the MCE production line. The current R&D includes the integration of a Joint Tactical Information Distribution System (JTIDS)/Tactical Digital Information Link-J (TADIL-J) capability, the integration of an Automated Air Tasking Order (AATO) capability, integration of secure anti-jam VHF (SINCGARS) radios and upgrades to the Ground Mobile Forces/Satellite Communications digital communications interfaces. This program also includes production funding for JTIDS terminals, JTIDS Modules (JMs), JTIDS Interface Boxes (JIBs) and Operations Modules (OM) Interface Kits, all of which are required to integrate JTIDS/COMM into the MCE. The planned phase includes a software interoperability upgrade to the TADIL-J Reissue 2 baseline, which works towards a Theater Missile Defense capability and the implementation of the Interim JTIDS Message Specification. This program is in budget activity 7 - Operational System Development, Research Category 6.6 because the Ground Theater Air Control System (GTACS) is a fielded, operational system currently undergoing major modifications/upgrades

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>This program develops and integrates system improvements which enable the E-3 AWACS to remain an effective, survivable airborne surveillance system for command and control of tactical forces and for strategic defense of the U.S. These improvements include Electronic Support Measures (ESM), Central Computer Memory Upgrade, Joint Tactical Information Distribution System (JTIDS) Class 2H/Tadil J and Navstar Global Positioning System (GPS) terminal integrations (collectively known as Block 30/35); the Radar System Improvement Program (RSIP); Extend Sentry effort; Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) Improvement efforts; and Have Quick A-Nets. RSIP will increase radar reliability and maintainability, restore required E-3 surveillance capability against the evolving threats posed by low radar cross section fighters and cruise missiles, improve electronic counter measures (ECCM), and enhance man-machine interface. Extend Sentry is a collection of 100+ projects that target investment in three areas. Extend Sentry prevents grounding of aircraft, buys back aircraft from maintenance downtime, and corrects deficiencies to meet operational requirements. C4ISR improvements include Link-16 data integration using improved display capabilities for AWACS Controller Consoles as part of the RSIP and Block 30/35 weapon systems modernization efforts, thereby expanding AWACS - to - shooter interoperability. C4ISR also provides for HF radio upgrade and Tactical Information Broadcast System (TIBS). Category of research: Operational Systems Development. AWACS is a fielded, operational system currently undergoing major modifications/block upgrades/continuing sustainment.</p> <p><b>(U) Acquisition Strategy:</b></p> <p>Block 30/35: ESM is joint development with NATO. Priced FPIF options with Boeing for ESM and 30/35 Group A hardware. CC-2E contract with LORAL Federal Systems with fixed price options. JTIDS and GPS acquired via respective program office-awarded contracts. RSIP is a joint development with NATO. Boeing is prime integrating contractor, Westinghouse is sub for radar equipment items. FFP contract planned sole source to Boeing for production. <p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The Airborne Battlefield Command and Control Center (ABCCC) provides rapid worldwide Command, Control, Communications and Computer (C4) capabilities to the Joint Force Air Component Commander or Joint Task Force Commander. During combat or contingency operations, ABCCC extends ground based C4I capabilities and can function in a stand alone mode during the absence of ground based units. The primary mission of the ABCCC is to provide on-scene theater battle management for the Combat Air Forces. It receives target nominations from the Air Operations Center (AOC) or other C4I systems (Joint Surveillance Target Attack Radar System (JSTARS), Air Support Operations Center (ASOC), etc.) and directs attack from air, sea and/or land assets to targets in the theater of operations. It can also function as a direct extension of the AOC, and Airborne ASOC, or the Air Component Commander's operations center. ABCCC supports functions across a broad spectrum of operations; from Forward Battle Coordination and coordination of Joint Forces, to Close Air Support, Air Drops, Search and Rescue and Crisis Management. Category of research: Operational Systems Development, ABCCC is a fielded, operational system currently undergoing pre-planned product improvements (P3I) which includes integration of the Joint Tactical Information Distribution System (JTIDS), integration of the Air Force Single Channel Ground and Airborne Radio System (SINCGARS), and upgrade of the Satellite Communications capabilities.</p>

**(U) A. Mission Descriptions and Budget Item Justification**

The Advanced Communication Systems program procures commercially available ground communications equipment for deployment to theaters of operations and develops and procures jam resistant ultra high frequency (UHF) and very high frequency (VHF) frequency hopping tactical radios. The HAVE QUICK UHF radios provide the primary Air Force and DOD UHF Electronic Counter-Countermeasures (ECCM) voice communications. SINCGARS (Single Channel Ground and Airborne Radio System) provides anti-jam, VHF frequency hopping voice and data communications and is the primary means of ECCM communications between Air Force, Army, USMC aircraft and ground units involved in close air support and joint battlefield operations. RDT&E funds in this program element are used to examine appropriate emerging technologies; provide software development support for the fielded HAVE QUICK family of radios; and determine and resolve integration issues pertaining to commercial-off-the-shelf (COTS) equipment, making this program budget activity 7, Operational System Development. The Theater Deployable Communications (TDC) program provides funding for the research, development, test and evaluation for the modernization of operational deployable communications, and integration of COTS equipment that support tactical air operations in a combat environment. This includes the integration of deployable communications equipment for active duty, Air National Guard combat communications and Theater Air Control System units.

Other Advanced Communication Systems Programs

- PACER SPEAK Operate the Air Force Air Request Net (AFARN), which the principal means of communications through which theater forces plan, request, coordinate, and control immediate close air support (CAS), reconnaissance, and airlift requests. The AFARN is operated by the Tactical Air Control Parties (TACPs)
- HAVE QUICK Frequency-hopping UHF radio that provides jam-resistant voice and data communications.
- SINGGARS Secure, jam-resistant VHF frequency hopping voice and data communications system that can be configured in ground and airborne modes.
- Digital Communications Terminal (DCT) The DCT is used for message generation and transmission over the AFARN by land maneuver units.

March 1996

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

0207423F Advanced Communications Systems

PROJECT NO. AND NAME

1013 Theater Deployable Communications (TDC)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1013 Theater Deployable Communications (TDC)	0	1,626	1,622	2,944	2,861	2,944	2,986	Continuing	TBD

(U) A. Mission Description and Budget Item Justification

As clearly demonstrated during Desert Shield/Desert Storm (DS/DS), today's generation of deployable communications equipment is bulky, inflexible in design and does not meet today's projected airlift availability or interoperability standards. Air Force planning calls for initial communications assets to be in place prior to the arrival of flying forces. Deployment priorities for DS/DS did not allow timely arrival of communications assets. Funds for this program are to complete joint interoperability certification testing, begin development and implementation of integrated network management software, and to support field activities and conduct integration activities. This program will research COTS equipment that will, either augment existing assets or replace tactical communications packages. The resulting Theater Deployable Communications (TDC) packages will reduce airlift requirements and be designed to support a wide range of operational scenarios, during deployment/employment, expansion and sustaining operations. Communications packages will be used by theater air control, combat communications, and special operations units as well as deployed air wings and mobility forces worldwide. Theater Deployable Communications (TDC) funds are accounted for in PE 0207422F in FY95 and PE 0207423F after FY95; therefore, this is not a new start program.

(U) **A. Mission Description and Budget Item Justification**

The fast paced development of new frequency hopping radio technologies by potentially hostile nations dictates that the U.S. maintains a technological lead. Ultra high frequency (UHF) frequency hopping voice radios are needed for jam resistant communications between tactical aircraft and airborne and ground control elements. The HAVE QUICK wave form used in these radios is the NATO standard for UHF anti-jam communications. The HAVE QUICK UHF radios provide the primary Air Force and DOD UHF Electronic Counter-Countermeasures (ECCM) voice communications. SINGARS (Single Channel Ground and Airborne Radio System) provides anti jam, very high frequency (VHF) frequency hopping radios and data communications and is the primary means of ECCM communications between Air Force, Army, USMC aircraft and ground units involved in close air support and joint battlefield operations.

**(U) A. Mission Description and Budget Item Justification**

The Theater Battle Management Core Systems (TBMCS) develop force-level and wing-level command, control and intelligence systems which utilize the Air Force TBM C4I standards. Acquisition of these systems will allow the execution of TBM planning, intelligence, and operational functions of the Joint Force Air Component Commander (JFACC). Components included in this document/program element are Command & Control Information Processing System (C2IPS), Contingency Theater Automated Planning System (CTAPS), and Wing Command & Control System (WCCS). This program is Budget Activity 7, Operational Systems Development; and is a Post Milestone III effort.

**(U) Acquisition Strategy:**

Electronic Systems Center, Hanscom AFB, MA will manage the overall TBMCS program (CTAPS/WCCS) and C2IPS program. Loral C2 Systems was competitively selected and is performing the actual TBMCS software integration and, when directed by the government, develop individual applications consistent with the TBM Architecture. C2IPS efforts will continue under the current prime contractor, Computer Sciences Corporation (CSC).

**(U) A. Mission Description and Budget Item Justification** The Command & Control Information Processing System (C2IPS) program develops communications and information processing hardware and software for all echelons of the Air Mobility Command (AMC). The integration of C2IPS computer resources and software with improved High Frequency (HF) equipment, new Ultra High Frequency (UHF) satellite networks, and other available communications media will result in a unified AMC C2 System. The C2IPS will be developed and installed in four increments. Increment 1 provides a digital data message handling capability at each IPS node and implement mission execution monitoring. Increment 2 will build on Increment 1 software to support mission planning and scheduling. Increments 3 & 4 will improve planning and scheduling capabilities and install Satellite Communications (SATCOM) interfaces and multi-level security. As a result of a broad area review, the Chief of Staff initiated improvements to theater C4I by coordinating and integrating on-going and planned computer systems. Air Force directed an incremental development and migration strategy to merge the best features of IPS into a design for a single wing-level C2 system. This is in Research Category 7, Operational Systems Development and is a Post Milestone III effort.

<b>(U) A. Mission Description and Budget Item Justification</b>											
<p>The Contingency Theater Automated Planning System (CTAPS) program directly supports the Joint Forces Air Component Commander (JFACC) in the planning and execution of the theater air campaign down to the unit level. The system is designed to open systems standards promoting interoperability among USAF, Services, and Allied command and control systems. The air tasking order generation and dissemination capabilities of CTAPS are the standard for all DoD command and control systems. The program utilizes an evolutionary acquisition strategy that accommodates changes in user requirements and improvements in commercial technology through a series of planned incremental software releases. In FY95, this program began implementing force and unit level migration strategies to merge the best features of existing systems, eliminate redundancy, and improve interoperability. FY96 on-going efforts are migrating the current system to Global Command and Control System (GCCS) common operating environment (COE), ensuring compatibility and commonality among services. This program is in Research Category 7, Operational Systems Development and is a post-milestone III effort.</p>

(U) FY 1996 (\$ in Thousands)

- (U) 3,000	Complete/Field Version 5.2.
- (U) 5,545	Continue Version planning process, design and development for TBMCs Version 1.0, and initiate full Ops/Intel interoperability.
- (U) 500	Continue development and testing for a Battlefield Situational Awareness capability.
- (U) 2,200	Continue ASOC software development and complete ASOC EMD effort.
- (U) 215	Complete Rome Lab development of the Advanced Planning System (Transitioned to I&D Contractor).
- (U) 5,000	Initiate Air Battle Planning and Architecture modifications to support the new Air Tasking Order (ATO) format.
- (U) 775	Initiate Air Battle Operations and execution modifications to support the new ATO format.
- (U) 1,320	Systems engineering and support.
- (U) 18,555	Total

(U) FY 1997 (\$ in Thousands)

- (U) 18,284	Continue version planning process, complete design/development of TBMCs version 1.0, and the full Ops/Intel interoperability.
- (U) 1,300	Complete ASOC software development.
- (U) 1,000	Initiate software development for TBMCs Version 2.
- (U) 1,050	Systems engineering and support.
- (U) 21,634	Total

<p><b>(U) A. Mission Description and Budget Item Justification:</b> This program includes development of mission critical application software for WCCS operating on commercially available hardware and system software. Wing commanders require an accurate, composite picture of their wing's total resources to effectively command, control, and manage their forces in support of their combat sortie generation and reporting responsibilities. The introduction of increasingly sophisticated weapon systems, with their need for and ability to produce large amounts of data, require an automated C2 system to bring meaningful, consolidated information to the commander in near real-time. Today, this information is relayed over secure and unsecured telephones, radios, and other communications devices, as well as by runners to update multi-user status displays (grease boards) or hand written logs. These techniques, which have not changed substantially since World War II, are cumbersome, error prone, may compromise sensitive information, and involve duplication of effort. Disparate efforts have led to the proliferation of stovepipe systems which inherently do not provide interoperability and do not adequately meet the needs of today's air operations. The WCCS program will design, develop and implement an automated, standard wing level C2 system that will be tailored to meet unique MAJCOM and wing requirements, in order to provide interoperability and reduce training and development costs. Key functional areas (operations, maintenance, mission planning, intelligence, weather, etc.) use WCCS to support the wing commander in the mission execution and reporting process by exchanging critical command and control and intelligence information with functional counterparts located throughout the wing. This is in Research Category 7, Operational Systems Development. This program is a post Milestone III effort.</p> <p>(U) FY 1995 (\$ in Thousands)</p> <ul style="list-style-type: none"> <li>- (U) 2,000 Complete software development for WCCS Version 1.1. <ul style="list-style-type: none"> <li>- Enhance graphic user interfaces.</li> <li>- Continue to update unit/force level interfaces.</li> <li>- Update Databases.</li> <li>- Technical upgrades (Oracle 7, Ovation).</li> <li>- On-line help capability.</li> <li>- Release &amp; Deploy WCCS Version 1.1.</li> <li>- Enhance system security.</li> <li>- Begin Force/Unit level migration.</li> </ul> </li> <li>- (U) 50 Begin software development budgeted for TBMCs Version 1.0.</li> <li>- (U) 1,441 Systems engineering and support.</li> <li>- (U) 3,491 Total</li> </ul>

## (U) A. Mission Description and Budget Item Justification

The Air Force has a variety of combat aircraft and numerous stores (munitions, missiles, fuel tanks, electronic countermeasures pods, etc.). Aircraft carry these stores in countless different loading combinations determined by operational scenarios, missions, and tactics. Loading configurations change as operational plans and tactics change, and as new aircraft and stores are developed. Before operational use, the Air Force must certify these configurations for safe loading, carriage, and separation (jettison and normal release), and must verify ballistics accuracy under the user-certified carriage and employment parameters. Electronic Technical Orders (TO's) are developed through the Combat Stores Loading Software (CSLS) and Combat Weapons Delivery Software (CWDS). The Air Force SEEK EAGLE program completes these certifications through any combination of ground and flight testing, wind tunnel testing, and engineering analysis. Over 700 aircraft-store combinations exist to be certified, with new ones added on a regular basis. Depending upon the complexity, certification takes from months to years. The SEEK EAGLE program is also responsible for insertion of new and emerging technologies into the SEEK EAGLE process and providing resources for sustainment of a viable Air Force aircraft-store certification capability. The Armament Standardization/Control/Munitions Material Handling Equipment (MMHE), Project 2784, satisfies several USAF and Tri-service requirements for standardization of armament and support equipment and eliminates unnecessary duplication of MMHE. (Funding for Project 2784 for FY96 and beyond was transferred to SEEK EAGLE from PE 64602F, Armament/Ordnance Development.) The RDT&E Research Category/Budget Activity is Operational Systems Development because the PE supports fielded systems.

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>Air Force aircraft carry a variety of combat stores (munitions, missiles, fuel tanks, electronic countermeasures, pods, etc.) in countless different loading combinations determined by operational scenarios, missions, and tactics. Loading configurations change based on operational plans and tactics, and as new aircraft and stores are developed. Before operational use, the Air Force must certify these configurations for safe loading, carriage, and separation (jettison and normal release), and must verify ballistics accuracy under the user-specified carriage and employment parameters. The SEEK EAGLE program completes these certifications through any combination of ground and flight testing, wind tunnel testing, and engineering analysis. More than 700 aircraft-store configurations exist to be certified, with new ones added on a regular basis. Certification may take months to years to complete because of the diversity and interaction among systems being tested. The SEEK EAGLE program is also responsible for insertion of new and emerging technologies into the SEEK EAGLE process and providing resources to sustain a viable Air Force aircraft/store certification capability.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) \$ 2,679 Complete certification of conventional weapons on bomber aircraft, including the CBU-87/89/97 on the B-1B</li> <li>- (U) \$ 1,131 Continue F-111 mixed load testing</li> <li>- (U) \$ 203 Develop and manage the Combat Stores Loading Software (CSLS) and standard configuration load builder for the Air Force's Combat Weapons Delivery Software. ## (U) A. Mission Description and Budget Item Justification

Initiated in FY 94, this program is in budget activity 7 - Operational System Development, because it provides RDT&E funding for Air Force and Joint wargaming architecture and model development, primarily in support of battlestaff training, education, and military operations. It also funds TAD BMC4I which fuses and expands on existing capabilities to support the theater CINCs. TAD BMC4I will move to new PE 65704F project 1010 in FY 96. See individual R-2s for detailed year-by-year justification.

March 1996

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

0207601F USAF Wargaming and Simulation

PROJECT NO. AND NAME

1008 National Air and Space Warfare Model (NASM)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1008 National Air and Space Warfare Model (NASM)	14,656	6,298	17,323	14,137	10,212	11,197	9,792	Continuing	Continuing

(U) A. Mission Description and Budget Item Justification

This program provides funds for Air Force and Joint wargaming architecture and model development, primarily in support of battlestaff training, education, and military operations. A new wargaming model, NASM, is being developed to replace the existing Air Force standard Air Warfare Simulation (AWSIM). NASM will expand the use and role of modeling and simulation (M&S) in support of operational and acquisition decision making, and increase the interoperability between Air Force and joint efforts. NASM includes an overall USAF M&S architecture and provides a reusable, portable, scalable, robust distributed core for other simulations. It includes an air combat resolution model to meet the needs of USAF MAJCOMs and Unified/Specified Command air components to train Air Component Commanders and their battle staffs. Primary users will be the unified command air components, CINCs, JFACCs, and Service components, as supported by BLUE FLAG and WPC for use in joint exercises involving air, ground, and sea campaigns. NASM is the air component portion of the evolving DoD, Joint Staff and Services Joint Simulation System (JSIMS) initiative.

## (U) FY 1995 (\$ in Thousands):

(U)	(U)	\$1,956	Continue rapid prototyping of M&S architecture elements
-	(U)	\$3,372	Continue development of NASM prototypes and operate the program management office
-	(U)	\$1,950	Continue to participate in Joint M&S architecture development activities
-	(U)	\$2,000	Support the Joint Simulation System (JSIMS) Joint Program Office
-	(U)	\$3,557	Continue to Re-engineer the Air Warfare Simulation into the final deliverable system
-	(U)	\$ 471	Expand interfaces of M&S systems and real world C3 and C3I systems
-	(U)	\$1,350	Develop an "exotic M&S demonstration" as directed by CSAF for the 95 Army-Air Force Warfighter talks
-	(U)	\$14,656	Total

## (U) FY 1996 (\$ in Thousands):

(U)	(U)	\$ 598	Begin development of specific air objects to support JSIMS architecture
-	(U)	\$2,200	Begin NASM integration effort and operate the program management office
-	(U)	\$1,500	Continue to participate in Joint M&S architecture development activities

## RDT&amp;E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)

BUDGET ACTIVITY		DATE							
7 - Operational System Development		March 1996							
PROJECT NO. AND NAME		PE NUMBER AND TITLE							
3858 Air Force Mission Support System (AFMSS)		0208006F Mission Planning Systems							
COST (\$ in Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
3858 Air Force Mission Support System (AFMSS)	13,851	19,068	18,500	17,129	18,118	18,244	18,582	Continuing	TBD
<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>(U) The Mission Planning System program was established in 1990 to consolidate mission planning system development efforts into a single unit-level mission planning system. This program maintains and preserves combat capability on old existing "legacy" planning systems which will migrate into a USAF wide standard mission planning system known as the Air Force Mission Support System (AFMSS). AFMSS acquisition strategy leverages military and commercial software integrated on Commercial-Off-The-Shelf (COTS) hardware. AFMSS encompasses evolutionary software and hardware development in an open systems architecture with planned annual software releases. AFMSS is the single unit-level mission planning system supporting all current/future aircraft and associated weapons: A/OA-10, F-15, F-16, F-22, F/EF-111, F-117, JSTARS, AWACS, ABCCC, U-2, AGM-130/GBU-15, TSSAM, JDAM, JSOW, B-1, B-2, B-52, KC-10, KC/EC/RC-135, C-5, C-17, C-141, MH/AH-6, MH-47, MH-53, MH-60, and C/AC/EC/MC-130. AFMSS is currently being fielded by the USAF and is in daily use by the US Special Operations Command (USSOCOM). In addition, AFMSS has been selected by the US Army to form part of their core aviation mission planning software.</p> <p>(U) Mission Planning Systems is budget activity 7. The Mission Planning Systems program currently supports deployed AFMSS systems, which includes transportables, non-deployable, and portable laptop workstations. AFMSS Block C1.0 software is currently being operationally fielded to the Combat Air Forces (CAF). Subsequent AFMSS Block C software releases and systems, including a desktop workstation, are in engineering and manufacturing development.</p> <p>(U) The AFMSS program is managed by the Directorate for Mission Planning Systems, Electronic Systems Center, Hanscom AFB, Massachusetts. Contractor for the AFMSS project is Lockheed Sanders, Nashua, New Hampshire. In-house (Government) work is performed by Oklahoma City-Air Logistics Center (OC-ALC), Tinker AFB, Oklahoma; Sacramento Air Logistics Center (SM-ALC), McClellan AFB, Sacramento, California; Warner Robins Air Logistics Center, (WR-ALC), Warner Robins AFB, Georgia; and Ogden Air Logistics Center (OO-ALC), Hill AFB, Utah.</p> <p>(U) FY 1995</p> <ul style="list-style-type: none"> <li>- (U) \$ 3,806 Rebaselined AFMSS Block C2.0/C2.0+ software development continues with release rescheduled for FY96.</li> <li>- (U) \$ 2,798 Continued integration of B-52, F-15A/B/C/D, F-16, F-111, C-5, C-141, AGM-130, and MH-60 planning modules. Began development of the Tri-Command (TRICOMS) to AFMSS interface. Completed module development for RC-135, MH/AH-6, and C-17 with Data Transfer Device (DTD). Began integration of MH/AH-6, MH-47, MH-60, F-117, and EF-111.</li> <li>- (U) \$ 800 Acquired and began deployment of Portable Mission Planning System (PMPS).</li> </ul>									

UNCLASSIFIED

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)			DATE	March 1996
BUDGET ACTIVITY		PE NUMBER AND TITLE		
7 - Operational System Development		0208006F Mission Planning Systems		
PROJECT NO. AND NAME				
3858 Air Force Mission Support System (AFMSS)				
-	(U) \$ 500	Continued AFMSS Block C2.5+ design, to include: enhanced air drop and air refueling; expanded weapons and delivery tactics planning; initial interoperability with Navy mission planning systems; initial nuclear weapons delivery, added Common Low Observable Autorouter (CLOAR); added full Small Computer System Interface (SCSI-2) interface.		
-	(U) \$ 200	Continued B-52 unique planning efforts and Data Transfer Upload Cartridge (DTUC) capability.		
-	(U) \$ 2,647	Completed development of the Common Mapping Production System (CMPS).		
-	(U) \$ 2,600	Continued B-1B unique planning efforts and DTUC capability.		
-	(U) \$ 500	Began study for AFMSS software re-architecture.		
-	(U) \$ 13,851	Total		
(U) FY 1996				
-	(U) \$ 9,705	AFMSS Block C2.0/C2.0+ software development continues with releases scheduled for Mar 96 and Jun 96, respectively.		
-	(U) \$ 5,380	AFMSS Block C2.2 software development effort plus testing results feedback incorporation.		
-	(U) \$ 3,000	Begin integration of F-16 and AGM-130. Continue integration of MH/AH-6, MH-47, MH-60, F-117, EF-111, A/OA-10, F-15, F-16, F-22, F-111, F-117, JSTARS, AWACS, ABCCC, AGM-130/GBU-15, TSSAM, JDAM, JSOW, B-1, B-2, B-52, KC-10, KC/EC/RC-135, C-5, C-17, C-141, MH-47, MH-53, MH-60, U-2, C/AC/EC/MC-130, WCMD, and SR-71.		
-	(U) \$ 983	Continue AFMSS 3.0 Software re-architecture effort		
-	(U) \$ 19,068	Total		
(U) FY 1997				
-	(U) \$5,880	AFMSS Block C2.2 software development continues with release scheduled for late FY97.		
-	(U) \$2,000	Begin integration of B-2, JSTARS, and U-2. Continue integration of F-16 and AGM-130. Complete integration of MH/AH-6, MH-47, MH-60, F-117, and F/EF-111.		
-	(U) \$3,800	Continue AFMSS A/W/E support to A/OA-10, F-15, F-16, F-22, F/EF-111, F-117, JSTARS, AWACS, ABCCC, AGM-130/GBU-15, TSSAM, JDAM, JSOW, B-1, B-2, B-52, KC-10, KC/EC/RC-135, C-5, C-17, C-141, MH/AH-6, MH-47, MH-53, MH-60, U-2, and C/AC/EC/MC-130, WCMD, and SR-71.		
-	(U) \$6,820	Continue/finish AFMSS 3.0 re-architecture		
-	(U) \$18,500	Total

<b>3858 Air Force Mission Support System (AFMSS)</b>									
<p>(U) O&amp;M funds for PE 28006F support the software and hardware maintenance costs of AFMSS. These funds also support the maintenance of the following existing operational systems until replaced by AFMSS. Mission Support System II (MSS IIA) supports existing combat capability for the F-15, F-16, F/RF-4, and F-111 aircraft mission planning. Mission Data Preparation System (MDPS) supports conventional and nuclear mission planning, aircraft/weapon avionics loading, compatibility between evolving B-1B, B-52H avionics, their weapons systems, and USSTRATCOM. The conventional Mission Planning and Production System (CMPPS) was terminated this year. O&amp;M funding supported approximately 240 older systems in FY94. By FY99, a similar amount of funding will support over 1500 mission planning systems world-wide.</p> <p>(U) There are no other related RDT&amp;E activities for unit level mission planning in the USAF. Over 40 individual aircraft and weapons programs develop their respective software that is used in conjunction with the AFMSS core software. The aircraft and weapons software is a complimentary, synergistic effort that provides specific aircraft and weapons information and functionality to the core AFMSS software. The combined software gives the warfighter the full spectrum of mission planning and combat capabilities for their aircraft or weapon including interoperability with planned Theater Battle Management (TBM) systems.</p>

<p>(U) <b>A. Mission Description and Budget Item Justification</b> This program is in budget activity 7 - Operational System Development, Research Category 6.6 This program conducts advanced development research and demonstration/validation where existing technology is applied to field requirements. This program studies and develops IW/C2W prototypical systems to provide warning, self protection, and support to personnel and equipment against combat systems employed by enemy forces. It identifies existing military and commercial research and development efforts which can satisfy unfulfilled operational requirements as identified by the Unified Commands, and quickly bridge the gap between technology developments and meld the technology into the warfighter's operational requirements. The Secretary of Defense identified the need for this capability in 1983, and with unanimous approval of the services and the Unified Commands, JCS made this function a part of the Joint Command and Control Warfare Center (JC2WC) mission (formerly the Joint Electronic Warfare Center (JEWCC). The Air Force as executive agent is responsible for the total funding of this effort.</p>

<p>(U) FY 1997</p> <p>- (S/NF)\$ 9]</p> <p>- (U)</p> <p>- (S/NF)\$ ] [ ]</p> <p>The Center will continue to bridge the gap between the lab, the operator, and business in order to introduce cutting edge technology to the field and fleet through rapid prototyping, briefings and demonstrations of state of the art equipment currently underdevelopment. The primary means to accomplish this will be through the sponsorship of symposia and use of electronic data transfer. Efforts will be directed at taking advantage of commercialization of products traditionally thought of as defense related, i.e. MMIC and ASIC chips currently being used in civilian applications (con't)</p> <p>Work performed by: The Joint Command and Control Warfare Center at Kelly AFB TX performs independent studies and analysis leading to development of Pre-Milestone Zero prototypes for field demonstrations and operations. When technology is available in Service and Industry labs, the JC2WC arranges for the development of a prototype and field demonstration of the prototype. Laboratories include Phillips Lab at Hanscom AFB MA, and Kirtland AFB NM, The Naval Research Lab, Washington DC. When required technologies are not available within DoD, JC2WC manages contractual efforts to produce, test and demonstrate prototypes. The Center also facilitates the exchange of information between the operators in the fleet and field and the laboratories, industry and Service program managers. The JC2WC currently has an Engineering Support Contract with Southwest Research Institute (SwRI), San Antonio TX, to perform engineering analysis and design, studies, reports, systems integration, fabrication, and software development. The JC2WC also maintains Cooperative Research and Development Agreements (CRDAs) with Lockheed-Fort Worth, Lockheed-Sanders, and American Electronics Laboratories. Under JC2WC leadership the government and contractor labs work to deliver products that support the warfighting CINCs and address operational IW/C2W shortfalls</p>

**(U) A. Mission Description and Budget Item Justification**

Air Force Theater Missile Defense (TMD) is focused in three areas: Command, Control, Communications, Computers, and Intelligence (C4I) enhancements; Improvements to existing Attack Operations systems; and the development of the Airborne Laser. PE0208060F is primarily concerned with C4I and Attack Operations as part of the Air Force focus in TMD, but also addresses some initial low-level studies and analysis for the Airborne Laser (ABL) technology program. AF TMD concentrates on defining improvements to existing operational capabilities, developing and evaluating prototypes, demonstrating as well as simulating modifications during operational concept demonstrations, and coordinating the transition of these capabilities to operational systems. C4I improvements contribute greatly to the overall effectiveness of TMD systems developed by each of the Services and the Ballistic Missile Defense Organization (Patriot, THAAD, etc.). C4I enhancements improve our ability to assess, target, plan and task attackers to counter Theater Missile (TM) threats. The C4I program encompasses JTIDS TMD Upgrades (including, for example, TMD Message Set Integration and JTIDS Range Extension), Distributed Battle Management, Operations Decision Tools (Time Critical Target Aid (TCTA), Defensive Planning Module (DPM), Attack Operations Decision Aid (AODA), and Active Defense Decision Aid (ADDA)), Intel Support Systems (Intel Support Concept and Real Time Intel Tools) and integration of these systems within the Air Force and among the Services. Attack Operations focuses on improving the ability to locate, identify, target and destroy theater missiles and supporting infrastructure on the ground. Attack Operations is concerned with the theater missile threat from production through deployment, prior to and during launch, as well as soon after launch before critical mobile targets are able to egress to hide locations. The foundation for Attack Operations is improved C4I and automatic target cueing/recognition (ATC/R) upgrades to one or more airborne platforms (Joint STARS, F-15E, Rivet Joint, U-2). The Air Force program is based upon taking our defense against the growing theater missile threat to the enemy by making near-term modifications to existing theater assets. The TMD program is concerned with improving existing operational capability, evaluating and demonstrating prototypes, as well as simulating modifications during operational concept demonstrations.

**(U) Acquisition Strategy:** HQ ASC will provide the program management for the concept exploration of TMD Attack Operations. ASC will conduct lab demonstrations with Wright Labs and support CONOPS development and requirements definition by analyzing and demonstrating measures of effectiveness for various sensor improvements and cueing schemes. HQ ESC will provide program management for the concept exploration of C4I enhancements. Prototypes and analysis of

7 - Operational System Development	0208060F Theater Missile Defense	

Improvements to existing C4I assets will complement the Attack Operations effort with combined participation in Operational Concept Demonstrations. These Attack Operations and BMC4I analyses and demonstrations are specifically targeted against operational deficiencies identified in the TMD Mission Area Plan (MAP), are traceable to the AF and JROC Mission Need Statement (MNS) and are consistent with the ACC TMD Concept of Operations (CONOPS). Integration of TMD requirements and fielding of proposed material solutions will continue beyond concept exploration in the appropriate program element for a particular system. For example, the TMD demonstration and requirements analysis for Joint STARS ATR may transition into a Joint STARS P3I effort within the Joint STARS program element. Existing contracts will be used for those systems where engineering change proposals are appropriate. Systems Engineering and Technical Analysis (SETA) contracts will be used to support the requirements definition phase of TMD improvements. In those areas where new materiel solutions are necessary to correct a deficiency, the source selection process will be followed to establish a new contract.

**\*FY94 TMD tasks were funded in PE27411F and PE63617F.**

## (U) A. Mission Description and Budget Item Justification

C4I enhancements are needed to reduce the battle management and command & control timelines associated with the theater missile threat. The C4I program includes:

- 1) Operations and maintenance of the Tactical Air Command and Control Simulation Facility (TACCSF);
- 2) Procurement of four MCE/TPS-75 with expert missile tracker (EMT) capability;
- 3) Intel Support Systems which include the development and revision of the Intel Support Concept (ISC), automation of the country studies, and development of the Real Time Intel Tool for TMD IPB;
- 4) JTIDS TMD Upgrades which are the development and integration of TMD messages into JTIDS host platforms and the extension of JTIDS beyond line of sight;
- 5) Operations Decision Support Tools which include the integration of the Time Critical Target Aid into TBM Core Systems (TBMCS) architecture, the development and migration of the Defensive Planning Module into TBMCS, and initiating the development of the Attack Operations and Active Defense Decision Aids.
- 6) Distributed Battle Management (Airborne DBM prototype) concept, which enhances the forward execution capabilities of the TACS to counter the short timeline of time critical targets. This includes the development, integration and test of the DBM capability on an airborne platform. The program will leverage off the capabilities of the current ground Combat Integration Capability (CIC) program which integrates and fuses various intelligence and surveillance feeds to provide the CINCs with an effective battle management capability.

4479 Attack Operations Concept Development											
COST (\$ in Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
4479	Attack Operations Concept Development	13,524	12,171	8,911	18,421	18,627	19,229	20,024	TBD	Continuing	
<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>Improvements in Attack Operations are based on the ability to locate, identify, and destroy theater missiles and associated infrastructure on the ground. In addition to the enhancements to C4I, Attack Operations project focuses on sensor capabilities and CONOPS and requirements development for TMD offensive counter-air and optimized integration with defensive systems. Automatic target cueing/recognition (ATC/R) upgrades to Joint STARS, F-15E, and potentially U-2, F-16 and UAVs are analyzed in demonstrations and simulation during Operational Concept Demonstrations and CINC experiments. A cost and operational effectiveness analysis of the Airborne Laser will be conducted in FY96, and its contribution to post-launch attack operations will be considered. The optimum set of sensor improvements will be proposed as P3I upgrades within existing program elements.</p> <p>(U) <u>FY 1995 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- (U) \$4800 Conducted prototype development of surveillance ATR.</li> <li>- (U) \$2598 Conducted Operational Concept Demonstrations with Roving Sands exercise.</li> <li>- (U) \$3171 Continued analysis of Attack Operations Sensor improvements.</li> <li>- (U) \$2955 Conducted prototype development of F-15E ATC/R demonstration.</li> <li>- (U) \$13524 Total</li> </ul> <p>(U) <u>FY 1996 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- (U) \$500 Prototype analysis of surveillance ATR demonstration.</li> <li>- (U) \$900 Conduct Operational Concept Demonstration with participation in CINC experiments.</li> <li>- (U) \$2604 Continue requirements definition and analysis of sensor prototypes and Attack Operations improvements</li> <li>- (U) \$3282 Conduct definition studies and analysis on Airborne Laser</li> <li>- (U) \$4885 F-15E ATC/R demonstration.</li> <li>- (U) \$12171 Total</li> </ul> <p>(U) <u>FY 1997 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- (U) \$1190 Conduct demonstration of surveillance ATR prototype.</li> </ul>

(U) A. Mission Description and Budget Item Justification

This program is in budget activity 7 - Operational System Development because DSCS is a production system consisting of a fully operational satellite constellation plus satellites awaiting launch as a part of the operational system. Any enhancements to the satellites not yet launched will be sole source contract awards. Efforts support fielded system, therefore, funding is appropriately in Operational Systems Development of Budget Activity Research Category.

DSCS is the backbone of the Government's satellite communications system, providing both secure voice and high data rate transmissions. DSCS provides unique and vital national security communications for worldwide military command and control, crisis management, relay of intelligence and early warning data, treaty monitoring and surveillance information, and diplomatic traffic. The communications relayed through DSCS support the National Command Authorities, Worldwide Military Command and Control System, Diplomatic Telecommunications Service, White House Communications Agency, the Navy, the Air Force Satellite Control Network, and ground mobile forces of all services.

## (U) FY 1995 (\$ in Thousands):

- (U) \$3,087 Continued DSCS mission support activities
  - Supported program office operations
  - Conducted programmatic tradeoffs and analyses
- (U) \$5,000 Paid performance incentives for development satellites that were still on orbit and operational
- (U) \$600 Conducted Service Life Extension Program (SLEP) risk reduction implementation study
- (U) \$5,500 Investigated and developed other DSCS III performance enhancements
- (U) \$14,187 Upgraded GTS software to support operator training for current satellite configuration
- (U) \$14,187 Identified for approved ATR and BTR reprogrammings
- (U) \$14,187 Total

## (U) FY 1996 (\$ in Thousands):

- (U) \$5,477	Continue DSCS mission support activities
	- Support program office operations
	- Conduct programmatic tradeoffs and analyses
	- Pay performance incentives for development satellites that are still on-orbit and operational
- (U) \$23,700	Start SLEP modification
	- Parts characterization and qualification
	- Procure components to develop modifications for first article insertion
	- Complete system PDR and prepare for system CDR
- (U) \$1,900	Investigate and develop other DSCS III performance enhancements
	- Develop low noise amplifier (LNA) upgrade to enhance performance and increase capacity for tactical users
	- Develop B6 satellite bandwidth modification to increase capacity level to that of satellites B8 - B14
- (U) \$31,077	Total

## (U) FY 1997 (\$ in Thousands):

- (U) \$5,527	Continue DSCS mission support activities
	- Support program office operations
	- Conduct programmatic tradeoffs and analyses
	- Pay performance incentives for development satellites that are still on-orbit and operational
- (U) \$18,300	Continue SLEP modification
	- Complete system CDR
	- Fabricate and assemble components for first article insertion
- (U) \$700	Investigate and develop DSCS III performance enhancements
	- Continue to develop LNA upgrade to enhance performance and increase capacity for tactical users
	- Continue development of B6 satellite bandwidth to increase capacity level to that of satellites B8 - B14
- (U) \$24,527	Total

(U) Current Budget Submit/President's Budget	14,187*	31,007
		-2,166
		24,527
(U) Change Summary Explanation:		
Funding: * \$5.0 million of DSCS FY95 RDT&E was reprogrammed for use in the Combat Survivor/Evader Locator (CSEL) Program through a Congressionally approved Above Threshold Reprogramming that is not reflected in the FY95 amounts above. A BTR for an additional \$0.5 million reduction in FY95 funding is currently being processed which is not reflected in the amounts above.		
\$2.166 million reductions in FY97 include: AFMC reductions (\$0.133 million), SETA and FFRDC reductions (\$ 1.000 million), and overhead reductions (\$1.033 million).		
Technical: Based on the Space Architect's recommendation, SLEP is being restructured to include performance enhancements. The primary modifications include: upgrade channels 1-6 of the last four satellites with 50 watt traveling wave tube amplifiers, upgrade solar cells, refine gain step attenuation, and incorporate a routing switch mod that allows channel 5 and/or 6 to be configured to either the gimbal dish antenna or multi-beam antenna.		
The new SLEP program will increase the overall system capacity by up to 200% and tactical warfighter capacity by up to 700%.

2834 Dual Frequency MEECN Receiver	280	0	0	0	0	0	0	0	264,346
4521 DIRECT	0	0	11,413	0	0	0	0	TBD	TBD

NOTE: Project 4521, DIRECT, was established in Jan 96 to consolidate efforts related to DIRECT currently being or planned for accomplishment in PE 0603851F, ICBM Modernization Dem/Vol (Project 1024 ICBM C2 Applications), PE 0604851F, ICBM Modernization EMD (Project 13C4, Strategic C4 Program), PE 0101213F, Minuteman Squadrons, and 0303131F, MEECN (Project 2832, VLF/LF System Improvements). FY95 and FY96 DIRECT efforts are reported under Project 2832, VLF/LF System Improvements, in this PE.

(U) **A. Mission Description and Budget Item Justification**

(U) MEECN communications systems provide assured communications connectivity between the National Command Authority (NCA) and the strategic deterrence forces primarily in the Very Low Frequency (VLF) and Low Frequency (LF) bands. MEECN includes the Dual Frequency MEECN Receiver (DFMR) and several VLF/LF improvement projects. The VLF/LF projects include the Modified Miniature Receive Terminal (MMRT), the High Data Rate (HIDAR) transmission mode, and the Defense IEMATS Replacement Command and Control Terminals (DIRECT) which is the Improved Emergency Message Automated Transmission System (IEMATS) replacement program. This PE is identified in Budget Activity 7, an operational system development, because it supports work on a currently operating system.

(U) **Acquisition Strategy:**

(U) Satisfy both the Air Force and Navy requirements via a joint interest effort with the Air Force Electronics Systems Center, Hanscom AFB, MA as the lead agency. Modify existing Miniature Receive Terminals (MRT) beginning with an engineering and manufacturing development (EMD) program. Competitively award the EMD contract in FY96 (with Milestone II in 3QtrFY96) for all three platforms: the E-4B National Airborne Operations Center (NAOC); E-6B Take Charge and Move Out (TACAMO); and the ICBM Launch Control Centers (LCCs). Award production contract is planned for FY00. Complete deployment of both Air Force and Navy MMRT units by 2003.

(U) A Milestone 0 Acquisition Decision Memorandum (ADM) for DIRECT was signed on 26 Jul 95. Contract award is expected in July 96.

## 2832 VLF/LF System Improvements

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
2832 VLF/LF System Improvements	28,381	14,895	10,489	11,334	1,914	1,969	1,998	Continuing	Continuing

(U) A. Mission Description and Budget Item Justification

(U) The Modified Miniature Receive Terminal (MMRT) program will modify existing Modified Receive Terminals (MRTs) for installation in three platforms: The National Airborne Operations Center (NAOC), E-4B, E-6B, Take Charge and Move Out (TACAMO); and, ICBM Launch Control Centers (LCC) with the High Data Rate (HIDAR) capability. MRT is a Very Low Frequency/Low Frequency (VLF/LF) receiver already designed, developed and installed in the B-1 and B-52 bombers. This program will make VLF/LF receivers fully interoperable in all three platforms.

(U) HIDAR is a Joint Staff-directed effort to provide a fast and interoperable MEECN mode. This program will develop and test modifications required to retrofit current MEECN platforms with the HIDAR software and firmware.

(U) The Improved Emergency Message Automated Transmission System (IEMATS) replacement system, which has been named Defense IEMATS Replacement Command and Control Terminal (DIRECT), is a Strategic Nuclear Command and Control (C2) system directly supporting the Chairman, Joint Chief of Staff (CJCS) and the National Command Authorities (NCA). DIRECT will provide all current IEMATS requirements, including the build and release of Emergency Action Messages (EAM) to allow the warfighter to remain responsive to NCA directives. DIRECT will be compatible with the Defense Message System (DMS) when it supplants the automated digital network (AUTODIN).

(U) High Power Transmitter Set (HPTS) was a joint Air Force and Navy program to provide the E-4 and the E-6 aircraft with an improved and supportable VLF transmission capability. HPTS completed development phase in 2QtrFY95.

## (U) FY 1995

(U) \$2,200 HIDAR firmware and software development.  
 (U) \$17,043 MMRT modification.  
 (U) \$1,100 Survivable Low Frequency Communication System (SLFCS) re-engineering.  
 (U) \$2,500 IEMATS Replacement (i.e., DIRECT) Prototyping.  
 (U) \$4,200 DFMR termination liability.  
 (U) \$100 Contract termination for HPTS at convenience of the US Government  
 (U) \$1,238 Mission Support  
 (U) \$28,381 Total

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>The program directs Command Control Communications and Computer Intelligence (C4I) system security R&amp;D with emphasis in multilevel computer security and providing secure voice transmission. The Air Force does not currently have the necessary mechanisms to provide adequate access control, integrity and assured service for today's sophisticated computer systems that host data at multiple levels of classification, and are simultaneously accessed by users with differing clearances and needs to know. With the emergence of the Information Super Highway as an integral DOD resource, it is imperative that adequate information protection mechanisms be developed to meet the national computer security requirements and standards. This program is in budget activity 7 - Operational System Development, Research Category 6.6 because it addresses the development and transition of multilevel information system security for use in new Air Force Information systems. However, research performed in this PE is similar to Research Category 6.4 engineering and manufacturing development efforts.</p> <p>(U) FY 1995 (\$ in Thousands)</p> <ul style="list-style-type: none"> <li>- (U) \$ 1,000 Completed the development of the prototype secure guard development.</li> <li>- (U) \$ 500 Continued joint evaluation and secure distributed computing experiments with Army/Navy/Air Force.</li> <li>- (U) \$ 1,600 Continued the technology transition efforts through the Air Force Electronic Systems Center.</li> <li>- (U) \$ 600 Completed the security policy and specification for secure data handling capability for the F-22 mission support system.</li> <li>- (U) \$ 700 Completed prototype of highly-configurable guard which can be ported/tailored to a multitude of target user environments and applications.</li> <li>- (U) \$ 700 Continued a fieldable version of an advanced TEMPEST signal analysis system.</li> <li>- (U) \$ 100 Completed the COMFY ASH program.</li> <li>- (U) \$ 400 Developed a prototype of signal collection processor with an order of magnitude improvement in performance.</li> <li>- (U) \$ 500 Completed the transition of the CYPRIS programmable cryptography system.</li> <li>- (U) \$ 400 Completed a real time demonstration capability for a secure multi-speaker conferencing system.</li> <li>- (U) \$ 550 Initiated development of narrowband secure video teleconferencing capability.</li> <li>- (U) \$ 500 Completed a prototype of a secure real time distributed computing environment.</li> <li>- (U) \$ 600 Continued development of multi-rate voice encoding systems to improve quality and performance over noisy channels.</li> <li>- (U) \$ 300 Continued development of mechanisms to simultaneously transmit in a secure manner both voice and data over dynamic channels.</li> </ul>

PE NUMBER AND TITLE

7 - Operational System Development

0303140F Information Systems Security Program

PROJECT NO. AND NAME

NM Computer Security RDT&amp;E: Firestarter

- (U) \$ 200	Continued Test & Evaluation Support for the development of Federal Standards.
- (U) \$ 900	Completed development of prototype secure distributed DBMS.
- (U) \$ 305	Continued development of high quality encoding schemes for secure transmission for use by F-22, Air Force Space Command (AFSPC) and as Federal Standard.
- (U) \$ 1,500	Continued development of Trusted RUBIX (secure relational database) effort
- (U) \$11,355	Total
(U) FY 1996 (\$ in Thousands)	
- (U) \$ 450	Perform joint service evaluation of multilevel secure distributed processing and trusted systems.
- (U) \$ 410	Continue developing secure data handling for Air Force Mission Support System.
- (U) \$ 260	Demonstrate/transition Multilevel Secure DBMS techniques and secure guard technologies.
- (U) \$ 225	Develop security mechanisms to support object oriented multi-media database management system.
- (U) \$ 367	Examine the utility, viability and relevance of current COTS products/ technologies in computer communication security in support of AF C2 applications.
- (U) \$ 882	Continue the extension of secure distributed computing environment to heterogeneous platforms and transition to operational use.
- (U) \$ 580	Develop high quality 2400 bps encoding schemes for secure voice transmission for use by F-22, AFSPACOM and submission as Federal Standard.
- (U) \$ 200	Develop capability to perform secure voice transmission over failure prone channels.
- (U) \$ 314	Continue development of narrowband secure video teleconferencing capability for STU-III applications.
- (U) \$ 213	Continue development of communication system to simultaneously transmit secure voice and data over narrowband channels.
- (U) \$ 256	Support development of digital speech test techniques and federal standards.
- (U) \$ 468	Transition information security technology and products to ESC PRISM/Security Transition Analysis Facility for test, evaluation and insertion into programs.
- (U) \$ 300	Develop and implement plans to secure various interfaces to and between Theater Battle Management Core and related systems.
- (U) \$ 450	Complete Computer Aided Signal Analysis System for emission security field use.
- (U) \$ 125	Support information warfare INFOSEC policy requirements and transition FIRESTARTER sponsored products to IW Program Office.
- (U) \$ 4,300	Air Force Electronic Key Management System.
- (U) \$ 1,500	Continue development of Trusted Rubix.
- (U) \$11,300	Total

0303140F Information Systems Security Program

PROJECT NO. AND NAME

NM Computer Security RDT&amp;E: Firestarter

(U) Change Summary Explanation:

Funding:

FY96: \$118 thousand general reduction.

FY97: \$2 million reduction for other Air Force Requirements

\$45 thousand reduction for overhead reduction

Schedule: Delays completion and start of numerous research efforts.

Technical: Planned Computer security and emission security and communications security efforts stop.

(U) C. Other Program Funding Summary (\$ in Thousands)

(U) Related RDT&amp;E:

(U) The research and development efforts pursued under Program Element (PE) 33140F are complementary to work being performed under PE 35167G which addresses the development of generic technology in the area of information security. Products from PE 33140F transition to other agencies through PE 64740F Computer Resource Management Technology Transition. There is no unnecessary duplication of effort within the Air Force of the Department of Defense.

(U) D. Schedule Profile

	FY 1995			FY 1996			FY 1997

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

0303144F Electromagnetic Compatibility Analysis Center

PROJECT NO. AND NAME

649E Joint Spectrum Center (JSC)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
649E Joint Spectrum Center (JSC)	9,163	0	7,667	7,910	8,049	8,285	8,415	Continuing	Continuing

(U) A. Mission Description and Budget Item Justification (U) The Joint Spectrum Center (JSC) serves as the DoD focal point for electromagnetic (EM) spectrum management matters in support of the Unified Commands, Military Departments, and Defense Agencies in planning, acquisition, training, and operations. The JSC receives operational guidance from the Joint Staff (J6) and policy guidance from the Assistant Secretary of Defense for C3I (ASD(C3I)). The JSC is the responsible activity for DoD spectrum management and use automation for strategic, theater, and tactical operations. The JSC has the responsibility for architecture and standardization of DoD automated spectrum information and management systems. Specifically, the Center designs, develops, and maintains DoD automated spectrum management systems, evaluation tools, and databases employed by the Unified Commands, Military Departments, and Defense Agencies. The JSC databases are the prime sources of information for DoD use of the EM spectrum. The JSC provides guidance and assistance to OASD, Joint Staff, DoD activities and Unified Commands to ensure development and acquisition of electromagnetically compatible systems and for the effective deployment of these systems in military operations. This Center is the focal point for spectrum related support, Electromagnetic Environmental Effects (E3), and EM interference resolution assistance to operational units including deployable support to CINC Joint Task Forces. The JSC mission is integral to other vital activities such as Information Warfare (IW), Command and Control (C2) Protect and other defensive C3 warfare activities as directed by the Joint Staff. This program is in budget activity 7 - Operational System Development, because it involves efforts supporting operational systems development.

NOTE: FY95 RDT&E funding was budgeted within the Air Force under PE 0303144F, Electromagnetic Compatibility Analysis Center (ECAC) which was renamed the Joint Spectrum Center effective 28 Sep 94. For FY1996, Executive Agent responsibility and funds for JSC were transferred from the Air Force to Defense Information Systems Agency (DISA). For FY1997 and outyears, the JSC responsibility and funds return to the Air Force.

## (U) FY 1995 (\$ in Thousands):

-	(U) 3,300	Supported JSC government staff
-	(U) 300	Developed and tested phase 2 of the Tactical Environmental Generator Work Station (TEGEN/WS) and releases 3 and 4 of Equipment Characteristics/Space Consolidated Maintenance Center (CMC)
-	(U) 2,000	Developed spectrum management software to support joint operations, spectrum certification, CD-ROM database products, and initial efforts to transition the Frequency Resource Record System (FRRS) from Defense Integrated Secure Network (DISNET1) to Secret Internet Protocol Router Network (SIPRNET)
-	(U) 463	Initiated planning to migrate legacy spectrum management systems into Global Command and Control System (GCCS) and Defense Information Infrastructure (DII) architectures

PROJECT NO. AND NAME			
649E Joint Spectrum Center (JSC)			
-	(U) 300	Supported OASD(C3I) on DoD spectrum reallocation efforts and developed spectrum planning and use database	
-	(U) 460	Modified Extended Air Defense Simulation (EADSIM) to reflect realistic scenarios	
-	(U) 100	Coordinated EMC/Vulnerability integration into DoD wide Modeling and Simulation architecture activities	
-	(U) 1,240	Improved JSC Cosite Analysis Model (COSAM)	
-	(U) 660	Developed techniques for analyzing propagation coupling on low observable airframe coatings, and analyzing 3-Dimensional aircraft geometrics	
-	(U) 175	Developed capabilities to evaluate interference to Ultra Wideband receivers	
-	(U) 165	Assessed EMC implications of advanced technologies (Monolithic Microwave Integrated Circuit (MMIC), non lethal weapons, high data rate UHF communications, next generation digital radios, etc.)	
-	(U) 9,163	Total	
(U) FY 1996 (\$ in Thousands):		EFFORT ACCOMPLISHED AND FUNDED UNDER PE 0303153K, DISA	
-	(U) 0	Total	
(U) FY 1997 (\$ in Thousands):			
-	(U) 100	Develop software to incorporate new sources of spectrum related data	
-	(U) 1,626	Initiate development of a client server architecture for spectrum management Automated Data Processing (ADP) systems supporting sustaining base operations including on-line access to standard database products using World Wide Web technology	
-	(U) 1,261	Support the migration of tactical spectrum management to the Common Operating Environments of the GCCS and participate in Joint Warrior Interoperability Demonstration 97 (JWID97) using prototypes of the GCCS Spectrum Management Modules	
-	(U) 1,261	Provide support to OASD/C3I on issues expected to arise in preparation for the World Radio Conference 97, and on other issues regarding reallocation of Government spectrum to the civil sector	
-	(U) 200	Coordinate Electromagnetic Environment Effects (E3) requirements for application within DoD modeling and simulation architectures	
-	(U) 970	Improve the JSC Space-Earth EMC model graphics and user interface to more efficiently handle large EM environments	
-	(U) 873	Incorporate improved capabilities to analyze advanced/complex systems within COSAM Next Generation (NG) and improve JSC's existing airframe coupling model to include 3-Dimensional aircraft geometry coupling paths, advanced surface shading techniques, and an improved user interface	
-	(U) 200	Assess advanced technologies for EMC implication	
-	(U) 776	Develop draft DoD ordinance E3 Directives and operational guidance, verify ordinance data susceptibility and develop data base to support operational deployment	
-	(U) 400	Purchase monitoring equipment to support interference resolution of advanced frequency hopping systems

## 4485 AF-Global Command and Control System (AF-GCCS)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
4485 AF-Global Command and Control System (AF-GCCS)	1,900	0	7,481	7,296	7,196	7,192	7,080	TBD	TBD

(U) A. Mission Description and Budget Item Justification

(U) The Global Command and Control System (GCCS) has been designated the Command and Control migration system for DOD. It is an integrated Command, Control, Communications, Computer, and Intelligence (C4I) system capable of supporting all echelons of the US military command structure. GCCS solves C4I interoperability problems between Service components by establishing a Common Operating Environment (COE), as the first step to eliminating stovepipe systems. The AF is responsible for development of four of the modules that will make up this COE, and integration of AF unique applications with the COE. This effort is Budget Activity 7, Operational Systems Development, because the program develops and implements software for an operational computer network.

(U) FY 1995

- (U) 500 Enhancement of Operational Taskings and Priorities (OT&P) software, and integration with the adapted COMPES modules  
 - (U) 1,400 Operations Module (OPSMOD) enhancement to the OT&P system  
 - (U) 1,900 Total

(U) FY 1996

(U) Adjustments to Budget Year since FY96 PB				+7,481					
(U) Current Budget Submit/President's Budget	1,900	N/A	7,481	9,381					
(U) Change Summary Explanation:									
Funding:	FY 95 reprogramming initiated program; FY96 President's Budget was submitted before the requirement for RDT&E AF funds was identified, any FY96 COE development efforts are expected to be conducted with Global Command Support Systems COE funding or below threshold reprogramming; FY97 is first budget submission.								
Schedule:	Requirement for GCCS COE and initial schedule was established in FY95, schedule for future releases is being defined.								
Technical:	Technical responsibilities for COE development were initially established in FY95. Requirements evolve to solve C4I interoperability problems by supporting efficient migration and integration of C4I applications at all levels of command.

2487 MILSATCOM Terminals	17,664	40,969	26,962	19,225	12,628	11,703	11,837	16,800	1,951,335

Notes: FY95 and FY96 funding includes Milstar terminals. From FY97 on, funding includes Milstar terminals, SHF terminals and UHF SATCOM. FY95-FY96 funding for UHF SATCOM is in PE 0303606F (UHF Satellite Communications). Funding for SHF terminals (FY95 and prior) is in PE 0303605F. Prior funding for all programs is included in total costs.

(U) A. Mission Description and Budget Item Justification

Military Satellite Communications (MILSATCOM) provides worldwide communications to strategic and tactical warfighters. The MILSATCOM Terminals Program contains efforts to develop equipment for Air Force users to communicate over military satellites, including Milstar, Ultra High Frequency (UHF) satellites, and Defense Satellite Communication System (DSCS). Enhancements to the Milstar ground and airborne Command Post Terminals, which were procured in FY93 through two contractors, are continuing. The Air Force's Milstar tactical terminals, the Single Channel Anti-Jam Manportable (SCAMP) and the Secure, Mobile, Anti-Jam, Reliable, Tactical Terminal (SMART-T), are funded by the Air Force and procured by the Army. Increasing requirements for UHF satellite capacity coupled with limited channel capacity, led the Joint Staff to mandate new standards for UHF users that are designed to improve satellite access and efficiency by utilizing Demand Assigned Multiple Access (DAMA) techniques. Development efforts in the UHF SATCOM program are primarily focused on the design and implementation of the Network Control System (NCS), and ground and airborne DAMA terminals. DSCS terminal procurement efforts sustain and modernize the Ground Mobile Forces terminal and the Jam-Resistant Secure Communications (JRSC) subnet of DSCS. This effort is in budget activity 7 - Operational System Development because it has completed a Milestone III review and is in production.

**(U) A. Mission Description and Budget Item Justification**

(U) The AF Satellite Control Network (AFSCN) is a global network of control centers, remote tracking stations, and communications links providing the earth-to-space connection required for operation of military satellites. The AFSCN provides satellite and payload command and control, and mission data relay using Mission Control Centers in California and Colorado and eight global Remote Tracking Stations (RTS). Since the AFSCN operations are continuous, system improvements occur in parallel with operations. This AFSCN project funds the development, acquisition, and engineering needed to continue the evolution of this highly reliable national satellite tracking, telemetry, commanding (TT&C), and data relay capability to meet the requirements of the growing inventory of operational and developmental DoD, National, Civil, and Allied satellite systems.

(U) Satellite systems require periodic contact with ground based command & control systems to operate. The AFSCN is the DoD common user satellite control network. The AFSCN is maintained, operated and upgraded using funding provided in three PE's. The AFSCN provides satellite state-of-health TT&C for the following operational satellite systems: DMSP, GPS, DSCS, DSP, FLTSAT, Milstar, GEOSAT, Skynet, NATO III/IV, and Classified Programs. It controls on-orbit spares and orbit repositioning for satellite programs with dedicated mission networks. It also supports these and other systems with mission data relay.

(U) The AFSCN conducts an Improvement & Modernization (I&M) program to reduce the cost of satellite operations in the future by operating more efficiently with fewer, lower skilled personnel and more reliable standardized equipment. The primary focus of the I&M program is upgrades to the Command and Control Segment (Network Operations Upgrade Program) and the Communications Segment (Range and Communications Development Program). Both are planned to be accomplished on a time phased approach exploiting commercially developed products through using an evolutionary acquisition strategy.

(U) The Network Operations Upgrade Program will move satellite command and control from a mainframe-based, centralized computer architecture to a workstation-based, open architecture using advanced high speed data links. When developed and fielded, this will facilitate a 30% reduction in O&M for the command and control segment. In addition, the AFSCN will have greater capability and capacity with increased standardization and interoperability. The Resource Management Segment scheduling system will be replaced with an automated system which includes integrated inter-range operations capability to enable more rapid and efficient use of network resources.

RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)		DATE	March 1996
BUDGET ACTIVITY	PE NUMBER AND TITLE		
7 - Operational System Development	0305110F Satellite Control Network (Space)		
PROJECT NO. AND NAME			
3276 Satellite Control Network			
<p>(U) The Range and Communications Development Program will transition the current, costly point-to-point AFSCN communications network to a communications grid system that integrates government and commercial networks as technology becomes available. This new architecture will eliminate costly infrastructure, enable surge capability, and provide a minimum 25% savings in O&amp;M costs over the current systems. This will improve capacity, reliability, data quality, and user access to the network.</p> <p>(U) Research category is Operational Systems Development, since this effort supports a fielded system. Development of new satellite control capabilities is essential to the operational capability of current and new satellite systems. The project number for the entire Program Element is 3276.</p>			
(U) FY 1995	<u>Command and Control Segment (Network Operations Upgrade):</u>		
(U)	C <sup>2</sup> Upgrades: Continued development of system architecture, documentation, and lab demonstration equipment for workstation based, Simplified Satellite Operations System. Objectives: open architecture "plug-and-use," increased efficiency, reduced hardware/software maintenance costs, and reduced manpower. Completed developments of functional requirements document and employment concept and identified system implementation alternatives. Began assessments of those satellite control products in the Demonstration Lab. Pursued a system development approach in cooperation with other government efforts. Scheduled program completion FY 01.		
(U) \$14,075	<u>Development Support:</u>		
(U) \$8,800	Developed and implemented user-requested, priority work group required modifications. Performed engineering analysis studies and cost estimates for future planned projects.		
(U)	<u>Communications Segment:</u>		
(U) \$16,000	Continued Communications Segment archival equipment upgrade by completing engineering, defining commercial-off-the-shelf (COTS) system hardware, and initiating procurement of standardized telemetry recorders. Initiated development of hardware and software for Wide Area Network Interface Units (WANIU) by developing first unit prototypes. Continued development of the Centralized Control and Monitoring (CCM) for network communications, including design and initial installation of laboratory equipment. Scheduled completion FY01.		
(U) \$20,815	<u>Network Integration and Systems Engineering:</u> Continued system engineering and development of network hardware/software to meet evolving satellite program requirements at Onizuka AFB, Falcon AFB, and the RTS's.		
(U) \$9,635	<u>Above Threshold Reprogramming for CSEL approved Dec 95</u>		
(U) \$69,325	<u>Total</u>

NOTE: FY94 funding is in PE #604707F. Starting in FY95, PE #604707F RDT&E funds were assigned to PE #305111F to consolidate RDT&E, Procurement, and O&M funds for all weather support resources under PE #305111F.

**(U) A. Mission Description and Budget Item Justification**

This program provides for the modification, sustainment, and acquisition of meteorological hardware and software needed to support the observing and forecasting needs of worldwide Air Force and Army operations. Efforts include: (a) Automated Weather Distribution System (AWDS) Pre-Planned Product Improvement (P3I); improves the timeliness of AWDS functions and ensures interoperability with customer command, control, communications, computers and information (C4I) systems; (b) Solar Electro-Optical Network Upgrade (SEON II); improves capability to detect hazardous solar activity for DoD space operations; (c) Combat Weather System (CWS); provides a small, tactical observing and forecasting capability with C4I connectivity for worldwide combat operations; (d) Cloud Depiction and Forecast System II (CDFS II); replaces logistically unsupportable mainframe computers at the Air Force's Global Weather Central (AFGWC) and upgrades satellite data processing, cloud depiction and forecasting, and classified weather support functions for operational commanders and national programs; (e) Global Theater Weather Analysis and Prediction System (GTWAPS); acquires theater weather models and associated hardware to improve AFGWC's theater support capabilities; (f) Tactical Weather Radar (TWR); provides lightweight, portable Doppler weather radar to support combat flight operations worldwide, (g) Space Weather Analysis and Forecast System (SWAFS) replaces aging 50th Weather Squadron (AFSPC) hardware and software to move to a more efficient computing environment, (h) studies associated with Air Force Combat Climatology Center Replacement (AFCCCR) which replaces aging hardware and software to enhance system supportability. This effort is in Budget Activity 7, Operational Systems Development, because it supports software development and system test associated with the upgrade and replacement of currently operational systems, systems already in production, and systems with approved production funds in the DoD budget.

**(U) A. Mission Description and Budget Item Justification**

Project 2026 funds ongoing liaison and interagency cooperative studies, between the USAF ATCALS program office and various organizations to include other Services, the Federal Aviation Administration (FAA) and the ICAO. Project 3587 was originally established for development of Military Microwave Landing System Avionics (MMLSA) and acquisition of the commercially developed Commercial Microwave Landing System Avionics (CMLSA). Originally part of a twenty year program to transition Air Force operations from the use of Precision Approach Radar (PAR) and Instrument Landing System (ILS) to the Microwave Landing System (MLS) for precision approach and landing. Due to the emergence of the Global Positioning System (GPS) as more cost effective solution (available after 2000), the effort is now being redirected to develop replacement box for ILS avionics to sustain precision landing capability until GPS becomes available as the follow-on precision landing technology. Current Air Force receivers do not meet the new specification required by the International Civil Aviation Organization (ICAO) for protection from interference problems forecasted to occur after 1998. The CMLSA continues to be installed on C-130 aircraft to meet a specific short-term precision landing mission requirement for tactical airlift. This program is in budget activity 7 - Operational System Development because it is upgrading avionics in currently fielded weapon systems.

**(U) Acquisition Strategy:** Engineering Manufacturing Development, Fixed Price Incentive Fee (FPF), Completion FY98, No NDI

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The Departments of Defense and Transportation have a goal to develop and acquire a common civil/military precision approach and landing system that is capable of operating with Category I, II, or III signal guidance accuracy. The International Civil Aviation Organization (ICAO) and NATO designated worldwide implementation of PLS for January 1988 with the Microwave Landing System (MLS) as the standard. Due to the emergence of the Global Positioning System (GPS), as a more cost effective solution, the Air Force's precision landing development has been redirected to develop a replacement box for ILS to support a precision landing capability until GPS becomes available. GPS is expected to be available in FY 2000. This replacement box capability will allow DOD to meet the ICAO requirements for FM frequency protection. This is especially critical in Europe where there is a high density of FM radio stations. The Air Force has a worldwide deployment commitments and large numbers of it's aircraft have a requirement for compliance with the ICAO Standards and recommended practices.</p>

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>National Security requirements dictate a continuing, highly reliable means of placing critical Department of Defense (DoD) satellites into required orbits. Assured access to space, directed by the President in the National Security Launch Strategy, will be accomplished through the use of a robust mix of Expendable Launch Vehicles (ELVs). The Medium Launch Vehicle (MLV) program provides sustainment, procurement and launch of DoD ELVs, including Atlas II and Delta II at Cape Canaveral AFS, FL and at Vandenberg AFB, CA. This program also provides for engineering support of active launch programs and post-flight assessment of DoD ELVs to maintain their high reliability. The preceding tasks require the funds to be in Operational Systems Development research category.</p> <p>(U) <b>FY 1995 (\$ in Thousands):</b></p> <ul style="list-style-type: none"> <li>- (U) \$3,209 Completed Delta II range safety compliance vehicle upgrades</li> <li>- (U) \$1,822 Continued GPS IIR mission integration and complete site activation</li> <li>- (U) \$1,169 West Coast Atlas II activation continues</li> <li>- (U) \$2,368 Base support and environmental programs</li> <li>- (U) \$8,344 Sustaining engineering and mission support for MLV launch facilities, infrastructure, and launch operations includes space launch complexes 3, 17, and 36 and supporting facilities</li> <li>- (U) \$2,805 Continued austere improvements to MLV</li> <li>- (U) \$19,717 Total</li> </ul> <p>(U) <b>FY 1996 (\$ in Thousands):</b></p> <ul style="list-style-type: none"> <li>- (U) \$4,806 Complete Delta II range safety required facility upgrades this year, first flight with new upgrades this year</li> <li>- (U) \$ 67 Continue STP (ARGOS) mission integration</li> <li>- (U) \$1,117 West Coast Atlas II activation continues</li> <li>- (U) \$ 702 Complete GPS IIR mission integration</li> <li>- (U) \$3,078 Base support and environmental programs</li> <li>- (U) \$10,913 Sustaining engineering and mission support for MLV launch facilities, infrastructure, and launch operations includes space launch complexes 3, 17, and 36 and supporting facilities</li> <li>- (U) \$20,683 Total</li> </ul>

**A. Mission Description and Budget Item Justification**

The mission of the Air Force Office of Special Investigations (AFOSI) is to protect Air Force (AF) resources through specialized investigative support. This includes investigating criminal matters affecting AF personnel, contract fraud, and economic crimes involving AF weapons systems and spare parts, and the investigation of environmental and counterdrug crimes. This element supports Technical Surveillance Countermeasures (TSCM) and technical support to criminal and counterintelligence investigations and operations conducted by AFOSI. AFOSI's TSCM mission provides security assessments to both AF and DoD facilities and programs. While most research to meet operational requirements is Operational System Development, there is also research in the category of Engineering and Manufacturing Development due to a need for modifications to present technology.

The equipment required to conduct TSCMs and technical support to investigations is unique and complex. TSCM equipment must be continually updated to remain effective in countering the increasingly complex devices used to thwart AF and DoD security. In an era of advancing technology, reduced manning, and increasingly high level fraud and environmental crime investigations, technical support equipment must be continually updated to enable the most cost effective and lawful telephone, data, and voice interceptions as well as, capture actual criminal activity on video or still images. Additionally, the capability to track suspects engaged in espionage, terrorist, narcotics or other criminal activity must be continually updated to ensure special agents have the best possible chance of thwarting criminal acts. AFOSI currently lacks the capability to support the interception of digital audio or telephone transmissions. In addition, AFOSI does not have the capability to effectively integrate automated software and hardware suites in support of TSCM surveys, nor does it have an effective technological means for the tracking of audio and tagging type signals.

March 1996

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

0305137F National Airspace System (NAS)

PROJECT NO. AND NAME

4090 National Airspace System (NAS)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
4090 National Airspace System (NAS)	29,490	12,627	12,614	13,516	2,290	598	497	Continuing	Continuing

**(U) A. Mission Description and Budget Item Justification**

The DoD National Airspace System program will modernize the DoD ATC system in parallel with the Federal Aviation Administration (FAA) modernization. DoD will acquire, to the maximum extent practical, systems on contract or systems to be on contract with the FAA to reduce development costs and prevent duplication. The DoD NAS program provides systems and facilities compatible/interoperable with the FAA modernization, prevents DoD flight delays and cancellations, continues DoD's access into Special Use Airspace (SUA), provides transparent services to military and civil aircraft, replaces aging DoD ATC systems, and increases flight safety. The Military Airspace Management System (MAMS) will effectively schedule and manage SUA. DoD military ATC and fighting/flying readiness will be maintained. This program is a budget activity 7 - Operational System Development, because the DoD Air Traffic Control (ATC) system, is an operational system.

**(U) FY 1995**

- (U) 4,375 Continued Military Airspace Management System (MAMS) development  
 - (U) 3,969 Continued site surveys, facility/transition planning  
 - (U) 950 Completed the development of the NAS Integration Plan  
 - (U) 2,681 Continued NAS DoD subsystem analysis for each DoD site  
 - (U) 13,863 Continued Radar acquisition and test  
 - (U) 2,127 Continued Automation acquisition and test  
 - (U) 1,525 Continued Voice Switch acquisition and test  
 - (U) 29,490 Total

7 - Operational System Development		0305137F National Airspace System (NAS)							
PROJECT NO. AND NAME									
4090 National Airspace System (NAS)									
(U) Change Summary Explanation:									
Funding: Not applicable.									
Schedule: To keep DoD and FAA acquisitions synchronized, the RFP release dates and planned contract award dates were shifted a few months and the funds realigned as indicated above. Previous plans were to accelerate the Milestone III decision and request its approval with the Milestone II decision. This was recognized as not feasible, and the plans were amended back to the previous position of separate Milestone II and III decision points.									
Technical: None.

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>(U) The Upper Stages Program provides consolidated acquisition of the Inertial Upper Stage (IUS) to support the DoD Mission Model. This effort includes flight operations at the Cape Canaveral Air Station, FL; support to flight operations at the Consolidated Space Test Center (CSTC); and reimbursable acquisition and operations support of upper stages for NASA as documented in MOA/MOU's between USAF and NASA. IUS supports the launch of Defense Support Program (DSP) satellites. IUS is the upper stage on a Titan IV (or it can be modified for Shuttle) and takes the DSP satellite to the required orbit. The program continuously evaluates and improves upper stage reliability, cost effectiveness, and responsiveness. It supports redesign of aging equipment and spares which are no longer manufactured or available; investigation of flight anomalies; and small studies to assist in defining future upper stages. The preceding tasks require funding in Budget Activity Research Category Operational Systems Development.</p> <p>(U) <u>FY 1995</u></p> <p>(U) \$2,624 Studied and designed corrective actions for anomalies and obsolete items</p> <p>(U) \$ 923 Program Management Support Activities</p> <p>(U) \$3,547 Total</p> <p>(U) <u>FY 1996</u></p> <p>(U) \$ 1,500 Study and design corrective actions for anomalies and obsolete items</p> <p>(U) \$ 955 Avionics Obsolescence Mitigation</p> <p>(U) \$ 904 Program Management Support Activities</p> <p>(U) \$3,359 Total</p> <p>(U) <u>FY 1997</u></p> <p>(U) \$1,200 Study and design corrective actions for anomalies and obsolete items</p> <p>(U) \$ 980 Avionics Obsolescence Mitigation</p> <p>(U) \$ 974 Program Management Support Activities</p> <p>(U) \$3,154 Total</p>

<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>(U) National security requirements dictate a continuing, highly reliable means of placing critical DoD satellites into required orbits. The Titan IV program provides the capability to launch the largest of these satellites into near-earth or geosynchronous orbits from either the east or west coast launch facilities. This program provides several different configurations for the Titan IV [No Upper Stage (NUS), Inertial Upper Stage (IUS), and Centaur]. In addition, the Titan IV program has developed a new vehicle configuration, the Titan IVB, with solid rocket motor upgrade (SRMU), new avionics and ground support equipment to meet reliability and increased performance requirements. This program provides continuing integration support to the payload community as well as continuing engineering support to maintain system characterization and reliability.</p> <p>(U) Beginning in FY94, this program element also included funding for engineering costs, payload integration, and Government costs for the Titan II space launch vehicle. This activity is included as operational systems development since both Titan II and Titan IV are operational launch vehicles.</p> <p>(U) FY 1995</p> <p>(U) \$32,543 Continued development of Titan sustainability upgrades and range safety-compliant systems</p> <p>(U) \$14,577 Continued integration for the Defense Support Program (DSP) and Milstar</p> <p>(U) \$12,536 Continued facility/ground equipment modifications and upgrades</p> <p>(U) \$54,192 Continued design requalification for the Titan IVB vehicle configuration</p> <p>(U) \$22,412 Continued Titan Booster support</p> <p>(U) \$4,551 Continued environmental management</p> <p>(U) \$2,397 Continued Titan II</p> <p>(U) \$143,208 Total</p> <p>(U) FY 1996</p> <p>(U) \$16,743 Continue development of Titan sustainability upgrades and range safety-compliant systems</p> <p>(U) \$13,552 Continue integration for the Defense Support Program (DSP) and Milstar</p>

(U) Change Summary Explanation:																																					
<p>Funding: FY95 Omnibus and Below Threshold Reprogrammings reductions due to lower than expected budget execution. FY96 reductions result from decision to terminate effort to outfit the Centaur Processing Facility (CPF) at Cape Canaveral AS with enough ground equipment to provide a storage capability. FY97 reductions driven by lower than expected budget execution in FY95(\$25,000). Remaining FY97 reduction resulted from decision to terminate the entire Centaur processing and cryogenic tanking facility at Cape Canaveral AS due to the limited operational effectiveness given the heavy-lift payload transition to the Evolved Expendable Launch Vehicle (\$13,000).</p> <p>* Note: Additional reductions in FY95 not yet reflected in above FY95 totals (\$1,253).</p> <p>** The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming needs (\$6,187)</p> <p>Schedule: FY96 and FY97 reductions result from deletion of the CPF Acquisition Program Baseline (APB) Initial Operational Capability (IOC) milestone in June 97.</p> <p>Technical: FY96 and FY97 reductions result from termination of the off-pad Centaur upper stage processing , cryogenic tanking, and storage capability.</p>

(U) A. Mission Description and Budget Item Justification

(U) This element directly supports implementation and planning for current and pending arms control agreements.

- (U) Treaty preparation/verification support activities encompass a wide range of projects necessary to prepare the United States for compliance with impending and future arms control treaties and negotiations.
- (U) Open Skies support includes development of Synthetic Aperture Radar (SAR), SAR media processing equipment, the Data Annotation and Recording Mapping System (DARMS), as well as systems integration, engineering, test, and evaluation. This includes:
  - (U) Aircraft systems integration, engineering, test, and evaluation
  - (U) Synthetic Aperture Radar (SAR) prototype development
  - (U) Data Annotation and Recording Mapping System (DARMS) prototype development
  - (U) Ground processing software development.
- (U) Comprehensive Test Ban Treaty (CTBT) Data Center Development and related CTBT technology development programs transfer from the Advanced Research Projects Agency (ARPA) to AF Arms Control in FY97. Work on seismic event identification techniques performed by Phillips Laboratory (Project 1010) and research on seismology in support of nuclear monitoring performed under the auspices of the AF Office of Scientific Research (Project 2309) were also transferred to AF Arms Control in FY97. These actions were taken to consolidate DoD funding and management of key treaty implementation activities and monitoring technologies into one program element.

4395 Radio	0	883	879	263	246	253	257	TBD	TBD	
<b>Notes:</b> - Beginning in FY96, funding for the Constant Source program is divided into two projects, Combat Intelligence System (CIS) and Radio. It is a continuing effort (no termination or new starts) within the PE. The change is in accounting only; no change in scope with creation of two BPACs.										
<b>(U) A. Mission Description and Budget Item Justification</b> (U) This program was established as part of the Air Force Tactical Exploitation of National Capabilities (TENCAP) normalization effort. Recently, the Constant Source Operator Terminal (CSOT) functionality was transformed into the Combat Intelligence System (CIS). This functionality processes the near-real-time threat information utilized by combat units/aircrews for mission planning and execution. The radio portion of this program enables the warfighter to access critical data provided by national and tactical intelligence sources. Currently over 130 ground systems are deployed. Air Force is jointly developing and procuring an airborne qualified radio called Multi-mission Advanced Tactical Terminal (MATT) with US Special Operations Command (SOCOM), Defense Support Program Office (DSPO), and the Navy. This Program Element is assigned in Budget Activity 7 Operational System Development because it involves post-Milestone III efforts and supports development of operational systems.										
<b>(U) Acquisition Strategy:</b> (U) Project 4071 - Integrate COTS software and hardware to reduce development, sustainment, and procurement costs. Sole source contract. Cost Plus Award Fee. Firm Fixed Price. (U) Project 4394 - Full and open competition leading to a Cost Plus Award Fee contract. (U) Project 4395 - Technology transfer from the Naval Research Laboratory to the contractor. Evolutionary acquisition strategy was implemented with a core capability procured during the first production option. Firm Fixed Price.

(U) A. Mission Description and Budget Item Justification

The Defense Meteorological Satellite Program (DMSP) is a fully operational Joint-Service program which supports all military services. Operational commanders require timely, quality weather information to effectively employ weapon systems and protect DoD resources. DMSP is the DoD's most important source of global weather data. It provides visible and infrared cloud cover imagery (1/3 nm constant resolution) and other meteorological, oceanographic, and solar-geophysical information. These data are required over the entire earth in support of strategic and tactical operations. At least two satellites are required in sun synchronous 450nm polar orbit at all times (sun synchronous means the satellites cross the equator at the same local sun time on each of their 14 orbits/day). DMSP operational systems development supports the current operational DMSP program.

## (U) FY 1995

Conducted system integration and test, calibration and validation, and related support activities.  
 Supported Small Tactical Terminal (STT) IOT&E and started enhanced algorithm development.  
 Initiated MARK IVB tactical weather terminal enhanced algorithm integration effort.  
 Continued Titan integration effort  
 Total

## (U) FY 1996

Continue system integration and test, calibration and validation, and related support activities.  
 Continue enhanced STT algorithm development.  
 Continue MARK IVB tactical weather terminal enhanced algorithm integration.  
 Continue Titan integration effort.  
 Support civilian/military command and control consolidation efforts.  
 Total

<p><b>(U) A. Mission Description and Budget Item Justification</b></p> <p>The Global Positioning System (GPS) is a space-based radio positioning, navigation, and time distribution system. GPS User Equipment (UE) consists of standardized receivers, antennas, antenna electronics, etc., grouped together to form sets which derive navigation and time information utilizing data transmitted by the satellites. These receivers are used by all the Services and DoD. RDT&amp;E funds UE development and testing, studies and engineering to assist integration into aircraft, software upgrades, product improvement studies, testing and evaluation of commercial GPS UE, and mission support. UE passed DAB Milestone IIIB in January 92 and is therefore in the budget activity/research category of Operational Systems Development.</p> <p>(U) FY 1995 (\$ in Thousands)</p> <ul style="list-style-type: none"> <li>- (U) \$485 Continued integration studies.</li> <li>- (U) \$804 Continued to support development testing for aircraft integrations.</li> <li>- (U) \$1,437 Continued developing software block upgrade for 5-channel GPS airborne receiver.</li> <li>- (U) \$918 Conducted GPS receiver product improvement studies.</li> <li>- (U) \$220 Continued development and product improvement testing for user equipment.</li> <li>- (U) \$175 Began NAVWAR Advanced Concept Technology Demonstration (ACTD).</li> <li>- (U) \$2,333 Continued support contracts.</li> <li>- (U) \$1,714 Continued In-House support.</li> <li>- (U) \$15 Continued Combat Survivor Evader Locator (CSEL).</li> <li>- (U) \$150 Began Hands-On Threat Demonstration.</li> <li>- (U) \$4,365 Accelerated Selected Availability Anti-Spoof Module (SAASM) and CSEL study efforts. <b>PROJECT NO. AND NAME</b>			
<b>3028 Navstar GPS (User Equipment)</b>			
<b>(U) B. Program Change Summary (\$ in Thousands)</b>			
(U) Previous President's Budget	FY 1995	FY 1996*	FY 1997
(U) Appropriated Value	9,871	17,371	14,891
(U) Adjustments to Appropriated Value	9,621	17,371	
a. Cong Gen Reductions		-345	
b. SBIR	-203	-354	
c. Omnibus or Other Above Threshold Reprogram		-212	
d. Below Threshold Reprogramming	+ 4,363		+ 17,559
(U) Adjustments to Budget Years Since FY96 PB			32,450
(U) Current Budget Submit/President's Budget	13,781	16,460	
(U) Change Summary Explanation:			
<p>Funding: FY95 "Below Threshold Reprogramming" reflects an increase for accelerating SAASM and CSEL study efforts. "Omnibus or Other Above Threshold Reprogramming" for FY95 does not yet reflect Congressionally approved ATR for SAASM and CSEL acceleration (\$1,135). FY96 amount (\$-212) addresses Bosnia reductions. "Adjustment to Budget Years since FY96 PB" in FY97 reflects increased funding for Advanced Concept Technology Development (ACTD) and NAVWAR prevention/protection efforts and decreases associated with the Non-Pay Inflation reduction.</p> <p>* The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming needs (\$181)</p>

## (U) A. Mission Description and Budget Item Justification

This program element funds Research and Development for the NAVSTAR Global Positioning System (GPS) space and control segments of the overall GPS program. This includes: satellite development, procurement, and deployment; training simulators; Mission Operation Support Center (MOSC); and operation of the ground control segment, including sustaining engineering, upgrades to the space and ground segments, and R&D efforts to support deployment of the entire GPS system. As a post-Milestone 3 program, we are classified as Budget Activity Research Category 7, Operational Systems Development.

## (U) FY 1995 (\$ in Thousands)

- (U) \$6,838 Continued system engineering including configuration management.
- (U) \$21,494 Continued initial Block IIR software development and delivery to AFSPACECOM.
- (U) \$431 Completed upgrade of ES9000.
- (U) \$5,077 Awarded Operational Control Segment (OCS) consolidated contract for Consolidated Operator Support Environment (COSE), OCS Architectural Implementation and Block IIR Full Functionality.
- (U) \$1,418 Continued Joint Program Office support.
- (U) \$35,258 Total

## (U) FY 1996 (\$ in Thousands)

- (U) \$3,000 Begin development of Training Simulator.
- (U) \$2,200 Develop data storage and retrieval system software required for launch and on-orbit operations.
- (U) \$4,900 Continue system engineering including configuration management.
- (U) \$1,302 Continue GPS Joint Program Office support.
- (U) \$13,621 Continue OCS consolidated contract for COSE, OCS Architectural Implementation, and Block IIR full functionality.
- (U) \$3,000 Initiate Sensor to Shooter accuracy improvement effort
- (U) \$28,023 Total

0305182F Eastern Space Launch Facility (Space)

PROJECT NO. AND NAME

4137 Range Standardization and Automation (RSA) Program

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
4137 Range Standardization and Automation (RSA) Program	38,492	48,279	35,704	36,410	38,466	39,682	40,930	Continuing	Continuing

## (U) A. Mission Description and Budget Item Justification

The Eastern and Western Ranges provide tracking, telemetry, communications, command/control and other support capabilities necessary to safely and successfully conduct civil, commercial, and national security spacelift operations, ballistic missile test and evaluation (T&E), and a variety of aeronautical and guided weapons T&E. Range assets are based on 1950s/1960s designs and technology, and are arrayed in a highly inefficient, manpower intensive architecture. Range instrumentation reliability is deteriorating and over 40% of the components are obsolete with no sources of support. The ranges do not provide the responsiveness and flexibility critical to affordably support the nation's spacelift needs. Replacement of the aging systems is a necessity. Range Standardization and Automation (RSA) will completely overhaul and modernize both the Eastern Range (ER) and the Western Range (WR), treating the two as a single integrated range system with an Eastern and Western segment. RSA will develop the integrated range system, using remote control and automation techniques to reduce the number of required operators, sites and facilities, and to produce improved responsiveness. The result will be a range system reconfigurable from one major operation to another in less than 4 hours versus 2-3 days, capable of being operated for 20% less than current ranges, and supportable through existing Air Force logistics infrastructure and standard practices. RSA is critical to the future of the spacelift ranges; performance and cost goals cannot be achieved without RSA. Categorized as Budget Activity Research Category, Operations Systems Development because it upgrades existing operational capabilities with new systems.

(U) FY 1995

(U) \$25,785

Continued RSA Phase I Contract: Development of consolidated instrumentation system including Consolidated Instrumentation Facility (CIF) and Unified Tracking Antenna (UTA) for Antigua and Ascension tracking sites; design, development, and acquisition of communications upgrades at Cape Canaveral Air Station (CCAS); design, development and acquisition of a satellite communications network to link downrange stations at Antigua and Ascension with Range Operations Control Center (ROCC) at CCAS; design, development and acquisition of a Central Telemetry Processing System applicable to both the Eastern and Western Ranges.

Completed OT&E of ROCC; Initial operational capability declared March 95. Continued Engineering Services Contract to facilitate transition of the facility to operational users.

(U) \$8,734

(U) \$3,973 Program support included System Program Office and Air Logistics Center support.

(U) \$38,492

(U) \$11,004	Continue RSA Phase I Contract: Integrate and begin test of Consolidated Instrumentation Facility (CIF); integrate and begin test of communications network; integrate and begin test of CTPS.	
(U) \$20,500	Continue RSA Phase IIA Contract: Complete range architecture design; develop weather, optical instrumentation, Control & Display basic infrastructure, and begin integration and test of first delivery increment.	
(U) \$4,200	Program support includes System Program Office, Air Logistics Center support, and Aerospace support.	
(U) \$35,704	Total	
<b>(U) Acquisition Strategy:</b>		
<p>The RSA Phase I Contract now underway will provide Consolidated Instrumentation Facilities (CIF) at Antigua and Ascension, satellite communications from these sites to the Eastern Range Operations Control Center, a Central Telemetry Processing System for both ranges, and Cape Canaveral Air Station communications network upgrades. An FY96 RSA Phase IIA contract was awarded to provide design and integration of the complete range architecture, and also procure a Western Range Operations Control Center, imaging systems, communications systems, mobile metric, telemetry and command assets, surveillance systems, weather data collection and prediction systems, debris tracking systems, planning and scheduling systems and data processing/display systems. An FY99 follow-on equipment contract will provide the primary telemetry receiving, radar, and command systems. Funding for RSA design and integration for both Eastern and Western Ranges is consolidated in this Eastern Range program element to reflect the standard range being developed for both ranges. A parallel sustaining improvement and modernization activity for existing range systems is separately funded with procurement funds.</p>

(U) A. Mission Description and Budget Item Justification

This program element funds the replacement systems for the Cheyenne Mountain Complex (CMC) which provides the Command, Control, Communications and Computers (C4) in support of the Integrated Tactical Warning/Attack Assessment (Integrated TW/AA) system. This program incrementally upgrades and replaces the current operational systems without loss of attack warning capability during the phased transition. The CMC supports the Commander-in-Chief (CINC) North American Aerospace Defense Command (NORAD)/CINC US Space Command in providing the National Command Authorities, USSTRATCOM and other forward users with early warning (missile, air, and space) and assessment of attack on North America or its allies.

This program element has three related projects: The first project, Cheyenne Mountain Upgrade (CMU), is six acquisitions that are supported by both the second and third project. The second project, Integrated TW/AA System Engineering, provides interface analysis and disconnect resolution between CMU and over twenty other Integrated TW/AA systems and program upgrades and supports the development of the Cheyenne Mountain Training System (CMTS). The third project, Legacy Interfaces, provides software development upgrades to post-IOC CMU subsystems and direct mission software support to meet operational needs.

This program element is research category/budget activity code 7 (Operational System Development) because it involves post-Milestone Three efforts, and the projects in this program element support development acquisition programs or upgrades.

(U) Acquisition Strategy:

The CMU program was restructured in FY 1994 to implement an acquisition strategy that tests and delivers four phases of user capability. Phase 1 implemented the complete missile warning capability in Sep 1995. Phases 2/3/4 will test and implement CMU capabilities in annual blocks (with O&M version releases) and incorporate upgrades and changes to meet evolving user requirements.

## (U) Change Summary Explanation:

Funding: FY 96 amount does not reflect the funding used for Below Threshold reprogrammings MSTI (PE 64441F - \$575). FY95 appropriated value is \$32,500 greater than PB request due to a Congressional transfer of \$41,500 in O&M funds to RDT&E, and a Congressional reduction of \$9,000 in RDT&E. FY 96 appropriated value is \$7,900 greater than PB due to Congressional transfer of O&M funds to RDT&E for software development. Adjustments to Budget Years Since FY96 PB include -\$139 in FY97 due to an O&M Reduction and an FY 97 reduction of -\$964 for inflation rate adjustment as well as an increase (\$4,900 in FY97) transferred from O&M for software development work being accomplished in the Space & Warning Systems Center (SWSC).

\* The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming (-\$719)

Schedule: Phase 1 (complete missile warning) was implemented in Sep 1995, two months ahead of schedule. Acquisition approach tests and implements Phase 2 (survivable communications) and accomplishes IOT&E by Aug 1996. Phases 3 and 4 (development of subsystem capability and software upgrades) are tied to annual O&M version releases.

Technical: No change.

**(U) A. Mission Description and Budget Item Justification**

This project was set up in 1989 when Air Force recognized the phased transition of CMU program into the Integrated TW/AA network could only be achieved through rigorous system-of-systems design and engineering analysis of all interfaces and relationships among the twenty-six systems of the network. This project provides for the efficient integration of CMU through interface analysis, schedule management and disconnect resolution between CMU and over twenty other Integrated TW/AA systems and program upgrades as required to support the Integrated TW/AA network's continually evolving system-of-systems (e.g., Space-Based Infrared System) and changes driven by new missions/threats.

**(U) FY 1995**

(U) \$4,517 Systems Engineering Integration and Test (SEIT): Provide operation integration of CMU Phase 1 installation, check-out, test and assessment; maintain program schedule; identify, track and resolve CMU disconnects

(U) \$3,111 Technical Performance Evaluation (TPE): Maintain CMU technical baseline; evaluate CMU performance and track to prescribed requirements; provide system engineering for CMU Phase 1

(U) \$5,457 Cheyenne Mountain Training System (CMTS): Continue to support CMTS program currently funded by multiple PEs

(U) \$627 Interface Control System development

(U) \$44 misalignment with Project 3881, Integrated TW/AA, this PE

(U) \$13,756 Total according to data base records (Actual Program Total = \$13,712)

**(U) FY 1996**

(U) \$4,796 SEIT: Provide operation integration of CMU Phase 2 installation, check-out, test and assessment; maintain program schedule; identify, track and resolve CMU disconnects

(U) \$1,922 TPE: Maintain CMU technical baseline; evaluate CMU performance and track to prescribed requirements; provide system engineering for CMU Phase 2

(U) \$2,143 CMTS: Continue to support CMTS program

(U) \$1,130 Interface Control System Development

(U) \$-1,130 realignment in work to project 3881 for ICD development

(U) \$8,861 Total according to data base records (Actual Program Total = \$9,991)

<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>The SPACETRACK program element represents a worldwide space surveillance network (SSN) of dedicated, collateral, and contributing electro-optical, passive radio frequency (RF) and radar sensors. The SSN is tasked to provide space object cataloging and identification, satellite attack warning, timely notification to U.S. forces of satellite fly-over, space treaty monitoring, and scientific and technical intelligence gathering. The continued increase in satellite and orbital debris populations, as well as the increasing diversity in launch trajectories, non-standard orbits, and geosynchronous altitudes, necessitates continued modernization of the SSN to meet existing and future requirements and ensure their cost-effective supportability. SPACETRACK also developed the systems interfaces necessary for the command and control, targeting, and damage assessment of a potential future U.S. Anti-satellite (ASAT) system. The Image Information Processing Center and Supercomputing facility for the Air Force Maui Optical Station (AMOS), were transferred to PE 62601F in FY92. The resources and responsibility for completing the HAVE STARE Radar System development were transferred to SPACETRACK from an intelligence program per Congressional direction in FY93. All of these projects are Budget Activity/Research Category Operational Systems Development because they involve development of or modifications to operational sensor network sites.</p>										
<p>(U) <u>Acquisition Strategy:</u></p> <p>Except for the Congressionally-directed Maui Space Surveillance Site facilities expansion project, AEOS, and the HAVE STARE radar acquisition, the other projects in this Program Element are sustaining engineering infrastructure support operations and maintenance efforts.</p>

b. SBIR	- 1,136	- 1,305		
c. Omnibus or Other Above Threshold Reprogram	- 7,119	- 848		
d. Below Threshold Reprogramming	- 5,045			
e. Adjustment to BTR not accounted for	200			
(U) Adjustments to Budget Years Since FY96 PB			6,728	
(U) Current Budget Submit/President's Budget	40,724	54,705	18,867	Continuing

## (U) Change Summary Explanation:

Funding: FY95 Appropriated Value reflects a Congressional addition of \$17,500 for AEOS project and \$3,000 for HAVE STARE project. FY95 BTR reflects a reprogramming of funds to PE 0207247F, PE 0301315F and PE 0305164F. Adjustments to Budget Years Since FY95 PB reflects funding transfer of level-of-effort engineering sustainment support to Operations & Maintenance account, reduction to Command, Control and Communications (C3) programs and reductions for inflation. Projects 2295 and 4239 have evolved into sustainment efforts and so have been transferred to the Operations & Maintenance (O&M 3400 Appropriation) from FY 97 and on. Rephasing and additional funding needed to complete the HAVE STARE project is yet to be determined subsequent to the pending overseas siting decision. Air Force budget increase for AEOS project continuation was the largest change in FY 97.

\* The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming needs (\$610)

Schedule: HAVE STARE IOC is delayed to FY98/99 due to delay in overseas site selection.

Technical: None.

**(U) A. Mission Description and Budget Item Justification**

Space surveillance includes space object cataloging and identification and supports the Space Defense missions of weapons support, attack warning for U.S. satellites, maintenance of space order of battle, cover-up alerts, and identification/assessment of space objects. The Space Surveillance Network Improvement Program (SSNIP) provides the sustaining engineering to correct identified deficiencies in support of those mission requirements. SSNIP also implements modifications required to reduce supportability/maintainability O&M costs. SSNIP efforts currently include reducing uncorrelated target (UCT) errors, orbital debris measurement and research, communications/data link optimization, system architecture analyses and changes to the Ground-based Electro-Optical Deep Space Surveillance System (GEODSS). This activity will continue as part of normalized sustaining engineering support services in the 3400 O&M appropriation account from FY 97 and on. This project is an Operational Systems Development Budget Activity because it involves a level-of-effort for sustained engineering support for development of, or modifications to, an operational SPACETRACK network site.

(U) FY 1995

(U) \$2,008

Continued GEODSS telescopes and Eglin FPS-85 radar O&amp;M cost reduction modifications.

(U) \$386

Continued astrodynamic standards, star catalog maintenance and deep space anomaly detection efforts to improve the accuracy of orbital element data, to improve consistency between sensors and to correct basic inadequacies of existing models for non-standard orbits.

(U) \$6,286

Continued systems engineering level-of-effort to define and support required sensor investment programs for FY96 implementation..

(U) \$8,680

Total

(U) FY 1996

(U) \$4,700

(U) A. Mission Description and Budget Item Justification

AMOS serves as a national R&D testbed for electro-optics and imaging technology supporting government and academic communities. It also provides operational data to AFSPC: infrared signature data and compensated imaging data used for space object identification and mission/payload assessment. Other government labs, national science foundations and other scientific agencies use of this facility are funded via other sources. This project is an Operational Systems Development Budget Activity Research Category because it involves a level-of-effort for sustained engineering support for development of, or modifications to, an operational SPACETRACK network site.

## (U) FY 1995

(U) \$4,454 Continued basic AMOS facility operations, maintenance and support of upgrade integration efforts.

Funding: Adjustments to Budget Years Since FY96 PB reflects funding realignments to the O&M appropriation budget account beginning in FY96. This activity will continue as part of normalized sustaining engineering support services in the 3400 O&M appropriation account from FY 97 and on. This consolidation is consistent with the current business plan for the next five year infrastructure support services contract and the fact that the Maui Space Surveillance Site shares a single operations crew and consolidated maintenance functions which will help further leverage scarce resources.

4279 Have Stare Radar\*\*

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
4279 Have Stare Radar**	9,090	23,778	5,440	0	0	0	0	TBD	TBD

**(U) A. Mission Description and Budget Item Justification**

The HAVE STARE (HS) radar was transferred from the intelligence budget in FY93 at the direction of Congress. The Air Force has identified a requirement for the HS system and has programmed funding in this program element to complete development and to deploy the system. HS is a high resolution X-band tracking and imaging radar with a 27 meter mechanical dish antenna. HS will be deployed as a dedicated space surveillance sensor to support the mission of space object catalog maintenance of deep space objects and mission payload assessment. HS will retain its original design features and their inherent potential to support other missions. Operational site location deployment has not been determined. HS will provide both an improvement in capability and a reduction in overall SPACETRACK O&M costs. This system is currently in the EMD phase leading to an IOC in FY99. This project is an Operational Systems Development Budget Activity because it involves a level-of-effort for sustained engineering support for development of, or modifications to, an operational SPACETRACK network site.

(U) FY 1995

(U) \$8,890

Continued in-CONUS developmental and integration testing and evaluation at Vandenberg AFB, CA.

(U) \$200

Completed technical analysis demonstrating HS will be able to meet space surveillance requirements at original mission site.

(U) B. Program Change Summary (\$ in Thousands)

	FY 1995	FY 1996	FY 1997	Total
(U) Previous President's Budget	16,063	24,700	5,500	Cost
(U) Appropriated Value	19,063	24,700		TBD
(U) Adjustments to Appropriated Value				
a. Cong Gen Reductions	- 253	- 564		
b. SBIR	- 473			
c. Omnibus or Other Above Threshold Reprogram	- 6,919	- 358		
d. Below Threshold Reprogramming	- 2,328			
(U) Adjustments to Budget Years Since FY96PB			- 60	
(U) Current Budget Submit/President's Budget	9,090	23,778	5,440	TBD

(U)	Change	Summary	Explanation:

**Funding:** Congress added \$3,000 in FY95 to accelerate the project but because of a delay in the overseas siting decision, funds were not required. Excess funds have been reprogrammed to other higher priority requirements via Congressional and Below Threshold Reprogramming actions.

**Schedule:** Project delayed due to delay in overseas site selection and withheld funding.

**Technical:** Development delayed due to withheld funding based on delayed siting decision.

## (U) A. Mission Description and Budget Item Justification

The Defense Support Program (DSP) is a system of satellites in geostationary orbits, fixed and mobile ground processing stations, one multi-purpose facility, and a ground communications network (GCN). DSP's primary mission is to provide tactical warning and limited attack assessment of a ballistic missile attack. The Talon Shield/ALERT (Attack and Launch Early Reporting to Theater) is an upgrade to ground station mission processing which exploits inherent satellite capability to provide theater missile warning and cueing. DSP is an operational system and is therefore included in the Budget Activity Research Category Operational Systems Support.

## (U) Acquisition Strategy:

The Defense Support Program (DSP) is currently sustaining production of the remaining satellites, 18 through 23. This sustainment includes post production storage, testing, preparation for launch and on orbit testing. Current contract efforts are required to stretch the support of launch centers to 12 months from the originally contracted 6 month launch centers. Satellite 23 will be the last of the DSP satellites to be procured. The follow-on to DSP, Space Based Infrared Systems satellites, will replace DSP starting in FY02. The ALERT squadron was activated on 1 Oct 94 with an ALERT IOC reached on 10 Mar 95. Further Talon Shield RDT&E efforts will be required to meet the AFSPC FOC requirements and for use as the path finder for the first increment of the ground consolidation.

<p>(U) <b>A. Mission Description and Budget Item Justification</b></p> <p>The Talon Shield project identified changes to existing DSP processing to enhance theater missile defense warning capabilities. These enhancements will facilitate more timely and accurate detection, identification, location and tracking of theater missile threats. This data supports attack operations/counterforce operations by providing accurate, timely launch prediction. In addition, this data will support active and passive defense forces by providing target cueing data and precise impact point prediction. The Air Force will transition these enhancements to an operational system, ALERT, to provide continuous real-time warning to the warfighter.</p> <p>(U) <b>FY 1995</b></p> <ul style="list-style-type: none"> <li>- (U) Combined Air Force and BMDO funded project.</li> <li>- (U) Continue Talon Shield hardware and software development.</li> <li>- (U) Initiate Pre-Operations software development support.</li> <li>- (U) Continue Operations and Maintenance Training Plan development and begin implementation.</li> <li>- (U) Begin hardware and software data package.</li> <li>- (U) FFRDC and office support.</li> <li>- (U) Initiate Initial Operational Test &amp; Evaluation.</li> <li>- (U) Initiate Independent Verification and Validation.</li> <li>- (U) Funds to be moved from BPAC 3624 to 3615 within this PE</li> <li>- (U) Total</li> </ul> <p>(U) <b>FY 1996</b></p> <ul style="list-style-type: none"> <li>- (U) Continue Talon Shield development (BMDO funded).</li> <li>- (U) Continue development to achieve ALERT full operational capability.</li> <li>- (U) Continue Operations and Maintenance Training Plan development and implementation.</li> <li>- (U) FFRDC and office support.</li> <li>- (U) Funds to be moved from BPAC 3624 to 3615 within this PE</li> <li>- (U) Total</li> </ul>

<b>(U) A. Mission Description and Budget Item Justification</b>											
<p>The Nuclear Detonation (NUDET) Detection System (NDS) consists of space, control, and user equipment segments. The space segment consists of NUDET detection sensors on the GPS/NDS satellites. The control segment consists of ground control software and is known as the Integrated Correlation and Display System (ICADS). The user equipment segment consists of the Ground NDS Terminals (GNT). The NDS provides a worldwide, highly survivable capability to detect, locate, and report any nuclear detonations in the earth's atmosphere or in near space in near-real time. The NDS supports NUDET detection requirements for AFSPC (Integrated Tactical Warning and Attack Assessment [ITWAA]), USSTRATCOM (Nuclear Force Management), and AFTAC (Treaty Monitoring). NDS is classified Budget Activity Research Category Operational Systems Development because it is a post-Milestone 3 program.</p>

(U) Change Summary Explanation:		
Funding: A reduction (-\$3,000) was taken in the FY96 appropriation as a result of the Appropriation Conference and HAC Marks. FY96 "Omnibus or Other Above Threshold Reprogramming" decrease (-\$135) reflects the Bosnia reduction. FY97 reduction in the "Adjustments to Budget Years Since the FY96 PB" (-\$7,660) reflects the NDS AF/AFTAC Laser Facility reduction, overhead reductions, and the Non-Pay Inflation reduction.		
* The FY96 PB amount does not reflect funding reductions that are reserved for other DoD reprogramming needs (\$139)

**(U) A. Mission Description and Budget Item Justification**

**4377: Real-Time Information in the Cockpit (RTIC):** The AMC Airlift and Air Refueling Mission Area Plans identify a system deficiency to protect aircraft from hostilities during combat operations. RTIC addresses this deficiency and increases aircrew survivability by providing aircrews with portable, on-aircraft, mission equipment to receive and display critical, real-time intelligence information. Strategic mobility aircrews often fly extended missions or transit enroute stations without full intelligence information capability. Information provided prior to mission departure is often outdated or incomplete upon arrival in theater. RTIC provides increased threat situational awareness and enables aircrews to make mission modifications to avoid enemy threats under rapidly changing combat conditions. To limit system implementation costs, it is envisioned that RTIC will be "snapped-on" to any AMC mobility fleet aircraft as needed. These systems are intended to be interchangeable between KC-135, KC-10, C-141, C-5, and C-17 aircraft, as required. This project is a FY97 new start modifying previously developed intelligence communication and display equipment to meet AMC requirements. This project is a low technical risk effort supporting fielded weapons systems and, therefore, is assigned to Budget Activity, Operational Systems Development.

**4495: AWFCS Reliability Improvement Program:** The C-5 All-Weather Flight Control System (AWFCS) Reliability Improvement Program replaces low reliability Line Replaceable Units (LRUs) in the automatic flight control system and replaces aging mechanical instruments in the engine and flight systems. Current trends indicate some components will be unsupportable within five years. This modification redesigns the architecture of the avionics.

**4523: CRAF Enhancement Study:** Following the C-17 DAB, USD(A&T) chartered a study effort to "Examine ways to strengthen the Civil Reserve Air Fleet (CRAF)" by exploring options such as lengthening contracts and considering ways to encourage CRAF providers to use more militarily capable aircraft. A new project was established in the C-5 Airlift Squadron program element to accomplish this study. \$5M was put in this PE and BPAC in the Air Force database in anticipation of the above-threshold reprogramming, but the CRAF study will be completed within existing resources. Therefore, the funds were sourced for modifying Air Force Plant 3, Tulsa, OK as authorized by section 23-7 of the Defense Authorization Act. The data will be corrected at the next available opportunity.

(U) Acquisition Strategies:

4377: Real-Time Information in the Cockpit (RTIC): The intended acquisition strategy is to reutilize software and non-developmental hardware already prototyped in a competitive, fixed-price, contract award environment.

4495: AWFCS Reliability Improvement Program: The acquisition strategy is to employ a competitive, fixed-price contract award to establish a single integrating contractor. The integrating contractor will be responsible for the following actions: 1) modifying and qualifying Commercial Off-The-Shelf (COTS) software and LRUs to meet C-5 performance requirements; 2) updating existing C-5 engineering and technical data; 3) developing interface control specifications based on performance requirements; 4) prototyping the system; and 5) supplying ground and flight test support.

4523: CRAF Enhancement Study: No acquisition strategy required since study accomplished using in-house AF resources.

(U) A. Mission Description and Budget Item Justification:

The AMC Airlift and Air Refueling Mission Area Plans identify a deficiency in ability to protect aircraft from hostilities during combat operations. RTIC resolves this deficiency and increases aircrew survivability by providing aircrews with portable, on-aircraft, mission equipment to receive and display critical, real-time intelligence information. Strategic mobility aircrews often fly extended missions or transit enroute stations without full intelligence update capability. Information provided prior to mission departure is often outdated or incomplete upon arrival in theater. RTIC provides increased threat situational awareness and enables aircrews to make mission modifications to avoid enemy threats under rapidly changing combat conditions. To limit system implementation costs, it is envisioned that RTIC will be "snapped-on" to any AMC mobility fleet aircraft as needed. These systems are intended to be interchangeable between KC-135, KC-10, C-141, C-5, and C-17 aircraft, as required. This project is a FY97 new start modifying previously developed intelligence communication and display equipment to meet AMC requirements. This project is a low technical risk effort supporting fielded weapons systems and, therefore, is assigned to Budget Activity, Operational Systems Development.

<p>(U) A. <u>Mission Description and Budget Item Justification:</u></p> <p>The C-5 All Weather Flight Control System (AWFCS) Reliability Improvement Program replaces low reliability Line Replaceable Units (LRUs) in the automatic flight control system and replaces aging mechanical instruments in the engine and flight systems. Current trends indicate some components will be unsupportable within five years. The modification acquisition strategy for the program is to establish a single integrating contractor to modify and qualify individual Commercial Off-The-Shelf (COTS) LRUs and software to meet C-5 performance requirements, update existing C-5 engineering and technical data, develop interface control specifications based on performance requirements, prototype the new system, and support ground and flight testing.</p>

<p>(U) A. <u>Mission Description and Budget Item Justification:</u></p> <p>Following the C-17 DAB, USD(A&amp;T) chartered a study effort to "Examine ways to strengthen the Civil Reserve Air Fleet (CRAF)" by exploring options such as lengthening contracts and considering ways to encourage CRAF providers to use more militarily capable aircraft. A new project was established in the C-5 Airlift Squadron program element to accomplish this study. \$5M was put in this PE and BPAC in the Air Force database in anticipation of the above-threshold reprogramming, but the CRAF study will be completed within existing resources. Therefore, funds were sourced for modifying Air Force Plant 3, Tulsa, OK as authorized by section 2307 of the Defense Authorization Act. The database will be corrected at the next available opportunity.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <table> <tr> <td>- (U) \$</td> <td>N/A</td> </tr> <tr> <td>- (U) \$0</td> <td>Total</td> </tr> </table> <p>(U) FY 1996 (\$ in Thousands):</p> <table> <tr> <td>- (U) \$</td> <td>N/A</td> </tr> <tr> <td>- (U) \$5,000</td> <td>Total</td> </tr> </table> <p>(U) FY 1997 (\$ in Thousands):</p> <table> <tr> <td>- (U) \$</td> <td>N/A</td> </tr> <tr> <td>- (U) \$0</td> <td>Total</td> </tr> </table>											- (U) \$	N/A	- (U) \$0	Total	- (U) \$	N/A	- (U) \$5,000	Total	- (U) \$	N/A	- (U) \$0	Total

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

0401214F Air Cargo Materiel Handling (463L)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost									
5120 60K Pound Capacity Aircraft Loader	0	0	3,212	8,420	841	529	0	0	54,879
5150 Small High Reach Aircraft Loader	0	0	592	404	314	0	0	0	43,187
	0	0	2,620	8,016	527	529	0	0	11,692

**(U) A. Mission Description and Budget Item Justification**

This Program Element contains two projects integral to the Air Force's ability to mobilize forces and equipment worldwide. The two projects involve testing, developing, and fielding of two aircraft cargo loader types which will eliminate critical existing loader deficiencies and will provide the Air Force with a flexible balance of large and small loader capability for the future. The 60K will replace the 40K loader as the strategic aerial port workhorse servicing all cargo military aircraft and Civil Reserve Aircraft Fleet (CRAF) and more importantly will have the enhanced capability to reach and directly interface with wide body aircraft (WBA) which the 40K does not possess. The small high reach loader with WBA capability complements the 60K capability by providing greater deployability and cargo handling capacity at a number of smaller, but vital, peacetime and contingency airfields. The fielding of the 60K and small high reach loaders will also eliminate the requirement for a fleet of Wide Body Elevator Loaders (WBEL), a stationary transfer platform currently used in conjunction with 40K and 25K loaders to service WBA. Starting in FY97, the 60K RDT&E funding has been realigned from PE 0604704F, Common Support Equipment Development, into this Program Element which also contains the 60K procurement funding. The RDT&E efforts of the small high reach loader have also been aligned to this Program Element which likewise includes the procurement funding of production units. This PE is in Budget Activity 7, Operational System Development since it involves the acquisition of two items to support fielded mobility aircraft; neither requires significant additional development.

**(U) Acquisition Strategy:**

The 60K loader program incorporated an approach whereas two manufacturers built two prototypes with a "drive-off" competition, operational assessment and a down select production contract awarded to one manufacturer. The 60K program aligns into this Program Element after IOT&E with minimal further development anticipated. Program office is currently in the process of developing the definitive acquisition plan for the Small High Reach Loader program.

**(U) A. Mission Description and Budget Item Justification**

Project 653852, 60,000 (60K) Pound Capacity Aircraft Transporter Loader: This project completes the development of the 60,000 pound capacity aircraft transporter/loader to fulfill the requirement of Air Mobility Command's (AMC's) Operational Requirements Document (ORD) 002-89-1. The project provides a single, unique loader to on/off load various aircraft like the C-17, C-5, C-141, C-130, C-27, KC-10, and Civil Reserve Air Fleet (CRAF) aircraft while combining the capabilities of the 40K, wide-body elevator, and lower lobe loaders. The 60K loader will be driven on/off of the C-17, C-5, and C-141 aircraft without shoring and will be the only loading vehicle capable of moving a type V airdrop platform carrying a full 60,000 pounds required by the US Army. The 60K loader will be significantly more reliable with a 100 hours mean time between failure (MTBF) versus the 40K loader's 18 hours MTBF. Major reductions from 30 man-hours to 3 man-hours in deployment preparation times will be made.

5150 Small High Reach Aircraft Loader		0	0	2,620	8,016	527	529	0	0	11,692

## (U) A. Mission Description and Budget Item Justification

This small loader (25-35K capacity) program supports the acquisition and delivery of a loader that will eventually, along with the 60K loader, form the backbone of the Global Reach airlift 463L system. The small loader program, procuring 300 units, will likewise contribute to the modernization of the 463L system.

The critical shortcoming of the current Air Force cargo handling system is the lack of sufficient vertical reach of both the large (40K) and small (25K) capacity loaders to directly interface with KC-10 and commercial wide-body aircraft (WBA), such as the B-747, DC-10, and B-767. Increased reliance on USAF and Civil Reserve Air Fleet WBA makes these shortcomings critical. A separate elevator/transfer platform is currently necessary to allow the existing loader fleet to service WBA, which is not an effective nor efficient load operation and results in a very timely, cumbersome, and costly method of deployment to meet worldwide contingencies/relief missions. Compounding the ineffectiveness of the current mix of aircraft cargo loader fleet is the overage condition, low reliability, and high cost to maintain. Upgrading the fleet with this new small loader with WBA capability to complement the 60K loader will correct critical high reach shortcomings and result in a well-balanced, flexible loader fleet to ensure the Air Force's ability to meet global mobility commitments.

Program office is currently in the process of developing the definitive acquisition plan for the small loader.

4494 KC-135 Economic Life Study	0	0	0	0	0	959	0	0	959

(U) A. Mission Description and Budget Item Justification

2214: Improved Air Refueling System (IARS): The IARS program funds research and development to improve the KC-135 aerial refueling fleet. This program, established by SAC Statement of Need (SON) 001-87, identifies and investigates KC-135 refueling system deficiencies. The IARS activity also supports the aging aircraft corrosion and fatigue project--CORAL REACH. CORAL REACH results provide accurate data for the KC-135 Economic Life Study (Project 4494) planned for FY00. Operational users prioritize each year's activities so the most serious deficiencies are addressed. This project is comprised of low technical risk efforts supporting a fielded weapon system and, therefore, is assigned to Budget Activity, Operational Systems Development.

4285: Receptacle Modification: The Receptacle Modification requirement was eliminated by the using command. The majority of FY95 funds were sourced in the FY95 Omnibus reprogramming. The remainder of the FY95 funds were used for contractor support.

4286: Multipoint Modification: Multipoint enhances interoperability with the Navy, the Marines, NATO, and other Allied nations. It permits simultaneous and independent refueling of two, probe-equipped, receiver aircraft. These systems provide enhanced reliability and efficiency for probe/drogue refueling and permits refueling of probe-equipped and receptacle-equipped receiver aircraft during a single mission (not simultaneously). This requirement was established by Air Mobility Command (AMC) Mission Need Statement 003-92 and AMC Operational Requirements Document 003-92-I/II. The project is a low technical risk effort supporting a fielded weapon system and, therefore, is assigned to Budget Activity, Operational Systems Development.

UNCLASSIFIED

<b>RDT&amp;E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit)</b>		DATE <b>March 1996</b>
BUDGET ACTIVITY	PE NUMBER AND TITLE <b>0401218F KC-135 Squadrons</b>	
<b>7 - Operational System Development</b>		
<p><b>4403: Real-Time Information in the Cockpit (RTIC):</b> The AMC Airlift and Air Refueling Mission Area Plans identify a deficiency in ability to protect aircraft from hostilities during combat operations. RTIC addresses this deficiency and increases air crew survivability by providing aircrews with portable, on-aircraft, mission equipment to receive and display critical, real-time intelligence information. Strategic mobility aircrews often fly extended missions or transit enroute stations without full intelligence information capability. Information provided prior to mission departure is often outdated or incomplete upon arrival in theater. RTIC provides increased threat situational awareness thus enabling aircrews to make mission modifications to avoid enemy threats under rapidly changing combat conditions. To limit system implementation costs, it is envisioned that RTIC will be "snapped-on" to any AMC mobility fleet aircraft when this capability is needed. These systems are intended to be transformed between KC-135, KC-10, C-141, C-5, and C-17 operational wings, as required. This project is a FY97 new start to modify and integrate on the KC-135 previously developed intelligence communication and display equipment to meet AMC requirements. This endeavor consists of low technical risk efforts supporting fielded weapons systems and, therefore, is assigned to Budget Activity, Operational Systems Development.</p> <p><b>4494: KC-135 Economic Life Study:</b> The KC-135 Economic Service Life Study consists of studies for structure, systems, and component support as well as cost benefit analyses to support a Cost and Operational Effectiveness Analysis (COEA). The COEA addresses replacement schedules for the KC-135 based on economic decision points. The study will include the effects of aircraft aging, to include corrosion, fatigue, and stress corrosion cracking resulting from the CORAL REACH Aging Aircraft Project. This effort is a low technical risk effort supporting a fielded weapon system and, therefore is assigned to Budget Activity, Operational Systems Development.</p> <p><b>(U) Acquisition Strategy:</b></p> <p><b>2214: Improved Air Refueling System (IARS):</b> The acquisition strategy for IARS consists primarily of separate task orders (with separate statements of work) ranging from fixed price to cost plus contracts. These task orders address a myriad of individual deficiencies against existing contract vehicles, such as the SPO-managed KC-135 Fleet Support Contract and Design Engineering Program contracts managed through the Air Logistics Centers.</p> <p><b>4286: Multipoint Modification:</b> The acquisition strategy for the Multipoint Modification employed open competition for a fixed price, Multipoint wing pod procurement. The Air Force is currently evaluating the Navy's refueling requirement to determine final procurement quantity.</p> <p><b>4403: Real-Time Information in the Cockpit (RTIC):</b> The intended acquisition strategy for RTIC is to reutilize software and non-developmental hardware already prototyped in a competitive, fixed-price, contract award environment.</p> <p><b>4494: KC-135 Economic Life Study:</b> The acquisition strategy for the KC-135 Economic Life Study is not available at this time--it is a new program start in FY00.</p>

(U) **Change Summary Explanation:**

Funding: FY97 funds for RTIC have been reduced \$36K for RDT&E reduction, O&M reduction, and non-pay inflation activities. FY96 reductions of \$671K due to SBIR, Economic and Overhead/Improved Management Reductions, and Bosnia I bills. FY96 PB eliminated funding for IARS in FY96/97. Remaining FY97 funds are for RTIC, an FY97 new program start. The following changes are not incorporated into the database: FY95 funding for IARS increased by \$2,511K via reprogramming from Open Skies.

Schedule: Receptacle/multipoint execution delayed until 4QFY95 due to a Congressional restriction on obligation of funds and evolving Air Force priorities. This restriction was deleted in FY95. Multipoint request for proposal released 2QFY95. Contract awarded 28 Sep 95. RDT&E phase scheduled to complete 4QFY97.

<p>(U) A. <u>Mission Description and Budget Item Justification (\$ in Thousands)</u></p> <p>The Multipoint Refueling System (MPRS) enhances interoperability with the Navy, the Marines, NATO, and other Allied nations. It permits simultaneous and independent refueling of two, probe-equipped, receiver aircraft. This system provides enhanced reliability and efficiency for probe/drogue refueling and permits refueling of probe-equipped and receptacle-equipped receiver aircraft during a single mission (not simultaneously). This requirement was established by Air Mobility Command (AMC) Mission Need Statement 003-92 and AMC Operational Requirements Document 003-92-1/II. This project is a low technical risk effort supporting a fielded weapon system and, therefore, is assigned to Budget Activity, Operational Systems Development. The Air Force is currently evaluating the Navy's refueling requirement to determine final procurement quantity.</p>

4403 Real-Time Information in the Cockpit (RTIC)

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
4403 Real-Time Information in the Cockpit (RTIC)	0	0	757	0	0	0	0	0	757

## (U) A. Mission Description and Budget Item Justification (\$ in Thousands)

The Air Mobility Command (AMC) Airlift and Air Refueling Mission Area Plans identify a deficiency in ability to protect aircraft from hostilities during combat operations. RTIC addresses this deficiency and increases aircrew survivability by providing aircrews with portable, on-aircraft, mission equipment to receive and display critical, real-time intelligence information. Strategic mobility aircrews often fly extended missions or transit enroute stations without full intelligence informational capability. Information provided prior to mission departure is often outdated or incomplete upon arrival in theater. RTIC provides increased threat situational awareness and enables aircrews to make mission modifications to avoid enemy threats under rapidly changing combat conditions. To limit system implementation costs, RTIC will "snap-on" to any AMC mobility fleet aircraft when this capability is needed. These systems are intended to be transformed between KC-135, KC-10, C-141, C-5, and C-17 operational wings, as required. This project is an FY97 new start to modify and integrate on the KC-135 previously developed intelligence communication and display equipment to meet AMC requirements. This project is comprised of low technical risk efforts supporting fielded weapons systems and, therefore, is assigned to Budget Activity, Operational Systems Development.

PROJECT NO. AND NAME

1325 HH-60G

COST (\$ In Thousands)	FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost
1325 HH-60G	0	5,109	3,322	0	0	0	0	0	8,431

**(U) A. Mission Description and Budget Item Justification**

The mission of the HH-60G is search and rescue in hostile environments. To operate on the future battlefield, rescue forces must be capable of communicating with command, control, and supporting forces. Also, defensive systems are a necessity in today's increased air threat environment. These funds will be used to engineer (1) the installation of long-range communications, a missile jamming receiver, and flare and chaff dispensers; and (2) control all communication radios, transponders, and navigation radios on to the current MIL STD-1553 data bus and aircraft control display software. This program also integrates the AAR-47 missile warning receiver, ALE-47 flare/chaff dispensers, and APR-39a(v)1 controls on to the MIL STD-1553 data bus and into aircraft control display unit software to provide both manual and automatic threat identification and countermeasure dispensing. This program is a new start in FY96 and is Research Category/Budget Activity Operational Systems Development because the project supports a currently operational system.

(U) FY 1995

(U) \$0 Not Applicable

(U) FY 1996

- (U) \$2,250 Engineering integration and control of all avionics.

- (U) \$2,895 Engineering and integration of Infrared Countermeasures (IRCM) and Missile Warning Receiver (MWR).

- (U) \$5,145 Total

(U) FY 1997

- (U) \$1,421 Avionics Operational Test and Evaluation.

- (U) \$1,901 Infrared Countermeasures (IRCM) and Missile Warning Receiver (MWR) Operational Test and Evaluation.

- (U) \$3,322 Total

(U) **Acquisition Strategy:** The strategy is to use proven, off-the-shelf equipment and technology. The plan is to use an existing Basic Ordering Agreement (BOA) with the HH-60G manufacturer. Both the avionics and the electronic warfare efforts will be placed on contract using the existing BOA.

(U) A. Mission Description and Budget Item Justification (\$ in Thousands)

Airlift provides essential flexibility when responding to contingencies on short notice anywhere in the world. It is a major element of America's national security strategy and constitutes the most responsive means of meeting U.S. mobility requirements. Additional airlift capability is needed for rapid deployment of combat forces in support of national objectives. The Congressionally-mandated Mobility Requirements Study (MRS), initially forwarded to Congress on 23 Jan 92 and updated on 28 Mar 95, validated the need for the C-17 aircraft. Specific tasks associated with the airlift mission include deployment, employment (airland and airdrop), sustaining support, retrograde, and combat redeployment. The C-17 is capable of performing the entire spectrum of airlift missions and is specifically designed to operate effectively and efficiently in both the strategic and theater environments. The vast increase in overall airlift capability provided by the C-17 is needed to replace the capabilities being lost as the C-141 retires from the Air Force inventory. The C-17 is capable of performing the airlift mission well into the 21st century. This program element is budgeted in Budget Activity, Operational System Development because the program has completed Milestone III and is currently continuing operational developmental efforts to support full-rate production and modification programs.

These five contracts are: 1) a multi-year production (MYP) aircraft contract (to economically purchase the full complement of production aircraft); 2) a Producibility Enhancement and Performance Improvement (PE/PI) contract (to develop cost reduction changes, capability enhancements, and design fixes to service-revealed problems); 3) a field support contract (to support the current and future fielded aircraft); 4) a MYP engine contract (for Government Furnished Equipment [GFE] engines); and 5) an aircrew training systems (ATS) contract (for aircrew training).</p> <p>Two C-17 Defense Acquisition Board (DAB) decisions, contained in the 3 Nov 95 and 1 Feb 96 USD(A&amp;T) Acquisition Decision Memoranda (ADMs), directed the Air Force to proceed with a 120-aircraft production program and pursue a multi-year procurement for the last 80 aircraft. Upon enactment of implementing legislation, the Air Force will proceed with a MYP program of 80 aircraft (along with engines to support them) to buy 120 aircraft at the maximum affordable rate (FY97-03: 8-9-13-15-15-5) beginning with the economic order quantity (EOQ) for FY96. The current C-17 acquisition strategy supports these decisions.</p>			- (U) \$10,100	3rd life durability test	- (U) \$38,800	Continue product improvement development & testing	- (U) \$6,800	T-1 refurbishment	- (U) \$14,268	Producibility Enhancement/Performance Improvement (PE/PI) Government flight test	- (U) \$69,968	Total	- (U) \$69,086	Continue product improvement development & testing	- (U) \$8,000	3rd life durability test	- (U) \$10,400	PE/PI Government flight test	- (U) \$87,486	Total

(U) Adjustments to Budget Years Since FY96 PB			71,791
(U) Current Budget Submission	184,419	69,968	87,486

## (U) Change Summary Explanation:

Funding: FY95 changes include congressional/general reductions (-2,077), SBIR (-3572) and a below threshold reprogramming (-86). FY96 changes include: congressional/general reductions (-986 for improved overhead savings, -444 for economic assumptions, & -35 for ADP savings), SBIR (-1,268), Omnibus and other above threshold reprogrammings (-554 for Bosnia I & -748 for F-16s to Jordan). FY97 changes include: adjustments to budget year since FY96 PB (14,217 budget transfer between C-17 PEs, -5,209 for inflation & other reductions, and +77,000 in a Zero Base Transfer [ZBT] in accordance with DAB decision to procure additional 80 aircraft).

Schedule: As a result of the November 1995 and February 1996 DAB decisions, the total program has changed from 40 to 120 aircraft and Full Operational Capability (FOC) from FY98 to FY05.

Technical: No changes.

<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>The B-2 Advanced Technology Bomber is America's most advanced long-range, land-based strike aircraft. This all-wing, two crew member aircraft has twin weapons bays of over 20,000 pounds capacity each and employs a wide array of signature reduction technologies to greatly enhance both its ability to penetrate enemy defenses and its ability to survive in a highly defended target environment. The B-2 provides global force projection capability and the ability to influence an enemy with insensitivity to the location of enemy assets or the availability of forward basing. This program is in budget activity 7 - Operational System Development, Research Category 6.6 because of the concurrency in developing, testing, producing, and deploying the B-2.</p> <p>(U) <u>FY 1995 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- \$204,056 Continued developmental test and evaluation</li> <li>- \$ 68,259 Continued development and support acquisition</li> <li>- \$ 93,196 Continued primary hardware development</li> <li>- \$365,511 Total</li> </ul> <p>(U) <u>FY 1996 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- \$146,313 Continued developmental test and evaluation</li> <li>- \$74,814 Continued development and support acquisition</li> <li>- \$361,522 Continued primary hardware development</li> <li>- \$582,649 Total</li> </ul> <p>(U) <u>FY 1997 (\$ in Thousands):</u></p> <ul style="list-style-type: none"> <li>- \$116,571 Continued developmental test and evaluation</li> <li>- \$60,214 Continued development and support acquisition</li> <li>- \$351,669 Continued primary hardware development</li> <li>- \$528,454 Total</li> </ul>

## (U) B. Program Change Summary (\$ in Thousands)

	FY 1995	FY 1996	FY 1997	Total Cost
(U) Previous President's Budget	384,080	623,616	446,225	24,815,402
(U) Appropriated Value	388,543	623,616		
(U) Adjustments to Appropriated Value				
a. Cong Gen Reductions	(4,463)	(12,423)		
b. SBIR	(7,294)	(15,628)		
c. Omnibus or Other Above Threshold Reprogram	(11,275)	(12,916)		
d. Below Threshold Reprogramming			82,229	-185,886
(U) Adjustments to Budget Years Since FY 1995 PB			528,454	24,629,516
(U) Current Budget Submit/President's Budget	365,511	582,649		

## (U) Change Summary Explanation:

## Funding:

FY 95: Reflects a SBIR reduction of \$7.3 million and Below Threshold Reprogramming reductions of \$11.275 million.

FY 97: Air Force restored \$51.5 million to realign FY97 funding with program content, less general AF reductions of \$18.4 million. In addition, \$49 million was added to FY 97 based on funding misphasing, additional growth in software development and flight test impacts, and to restore shortfalls from earlier POM requests.

## Schedule:

Envelope Expansion: Completion of envelope expansion has moved from 4th Qtr FY95 to 2nd Qtr FY96 to allow time to complete the remaining 1% of test points needed to support Block 20 capability in 4th Qtr FY96. This delay minimizes costs by integrating tests into the available flight test opportunities and maximizes flight test efficiencies while still meeting Block 20 delivery.

Complete GPS Testing: Completion of GPS testing has moved from 4th Qtr FY95 to 2nd Qtr FY96, based on the need to assure sufficient analysis of flight test data. The time between test flights has been extended to accommodate data processing/analysis. The schedule still supports Block 20 delivery.

(U) A. Mission Description and Budget Item Justification

This program develops, tests, and evaluates national and Air Force measurement standards and calibration equipment in support of all Air Force programs and activities, including over 150 base Precision Measurement Equipment Laboratories (PMELEs) worldwide. Metrology research and development provides technology to support systems in all phases of development and acquisition, as well as Air Force R&D laboratories, test ranges, ground test facilities, and operational weapons systems support. Rapidly changing technology requires continuing research and development of measurement standards and calibration equipment to ensure modern weapon systems meet Air Force readiness objectives. This program addresses all metrology disciplines and includes the technology areas of laser, infrared, microwave, millimeter wave, mechanical, electrical, electronic, and ionizing radiation measurements. It is in Budget Activity 7 as it supports operational systems.

Metrology is a technical discipline devoted to the science of measurements and to the study and improvement of measurement technology. Measurements are the foundation of military system development, quality assurance, hardware conformance testing and system readiness tests. The integrity of these tests is assured through calibration and traceability assurance schemes. The capability to measure and calibrate must parallel the emergence of new technology, new ranges, and new capabilities of military systems. Lack of new measurement capability impedes or blocks the successful exploitation of new technologies, especially in the movement from development laboratory to production to deployment. R&D efforts are essential within the DoD to pace these requirements, otherwise, these same new systems will suffer time delays, excessive cost, and increased risk due to unreliable test results in all phases of development, production, deployment and operation.

## (U) FY 1995 (\$ in Thousands):

- (U) \$515	Completed development of IR reflectance standards; continued development of IR transmittance and laser detector standards for IR / laser weapon systems.
- (U) \$377	Completed development of an improved IR source; continued development of improved IR & visible detector standards for electro-optical weapon systems.
- (U) \$290	Continued development of measurement capabilities to support low radar observables and of standards for radar and communications systems.
- (U) \$325	Continued development of microwave noise figure and power standards used to support radar and communication receivers.
- (U) \$310	Completed development of step gages and continued developing techniques for measuring flatness and roundness of precision aircraft components.
- (U) \$155	Continued development of standards for electrical pulse measurements and DC voltage transfer standards to support electronic test equipment.

<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>This program is in budget activity 7 - Operational System Development, Research Category 6.6 because it provides support to systems in production and/or an operational use. The Manufacturing Technology (MANTECH) Program is a corporate Air Force program that establishes and demonstrates advancements in manufacturing process technologies, manufacturing engineering systems, and industrial practices and transitions these advancements into weapon system design, development, acquisition, and/or sustainment. The Program strives to make superior mission enabling technologies an affordable reality by expanding access to a capable, responsive, multi-use industrial base with efficiencies comparable to world-class enterprises. Program efforts accelerate shop floor manufacturing process maturation, at every stage of development, through increased emphasis on cost, time, and quality risks in transition. Best processes are evaluated and adapted for application. Where mature processes are not available, laboratory-developed initial process capabilities are matured and inserted into weapon system programs. The MANTECH Program goes beyond factory floor manufacturing processes to encompass every activity within an industrial enterprise, ranging from above the shop floor activities [including tools for integrated product process development (IPPD)] to supplier base interactions and performance. The strategies and best practices of world-class enterprises are analyzed and the performance of defense suppliers benchmarked. The world's best industrial practices are adapted and validated in multiple pilot projects and deployed in defense applications. Project efforts address and target all industry levels, from large prime contractors to small material and parts vendors. In the FY96 PB, the MANTECH was submitted as PE63771F. The program has been reestablished as part of PE78011F, Industrial Preparedness, to respond to Congressional direction provided in the FY96 Authorization &amp; Appropriation Acts.</p>

PROJECT NO. AND NAME

## 3600 Industrial Preparedness - Manufacturing Technology

- (U) \$14,936 Demonstrate integrated product/process development tools capable of affecting reduced cost and accelerated cycle time in the design and manufacture of defense systems. Establish and demonstrate electronic data exchange concepts and tools and their application in affecting networked enterprise relationships, product producibility, manufacturing systems interoperability, and technology affordability.
  - (U) Continue effort to establish and demonstrate the methodologies and tools for the capture of tester-independent test requirements to reduce the warfighter's systems life cycle cost burden.
  - (U) Continue effort to demonstrate a product definition management system which spans bills of material in multiple production environment. Facilitate process maturation and standardization for military unique modules, sensors, arrays, solar cells, automatic test systems, and devices to enable the low-risk, affordable utilization of mission enabling technologies. Establish and demonstrate process modeling and statistical process control metrics for electronics systems components, materials, test, and inspection techniques.
  - (U) Continue effort to establish a manufacturing process to produce affordable tactical grade fiber optic gyroscopes.
  - (U) Demonstrate electronic manufacturing process improvements for low-cost ferrite circulators and for maintenance-free batteries.
  - (U) Initiate manufacturing efforts on multi-bandgap solar cells for spacecraft to complement Phillips Laboratory development effort. Establish and demonstrate advanced processes for metal material manufacturing. Facilitate process maturation to accelerate affordable, low-risk exploitation of mission enabling technologies. Establish process control and improvement aimed at reducing product variability with special emphasis placed on process considerations in the design phase. Achieve industrial base risk reduction by promulgating critical process technologies.
  - (U) Establish manufacturing capacity for large welded titanium assemblies for fighter aircraft.
  - (U) Demonstrate thin-wall casting manufacturing process for turbine engines leading to product validation.
- (U) \$7,205 Establish integrated process/product capabilities for the design and manufacture of mission enabling, low-cost composite structures. Facilitate process maturation to accelerate expanded composites utilization. Demonstrate in situ process control and closed-loop improvement capabilities. Achieve industrial base risk reduction by facilitating enhanced composites affordability.
- (U) \$18,485 Demonstrate rapid manufacture of thermoplastic radomes spare parts for special purpose aircraft.
- (U) \$18,485 Validate reproducible and affordable processes for the manufacture of multi-functional structures for fighter aircraft. Benchmark world-class enterprise processes and practices aimed at identifying capabilities and/or approaches for reducing cycle time and at eliminating waste and inefficiencies. Conduct pathfinder and pilot efforts in high-payoff endeavors aimed at validating potential benefits accrued from flexible manufacturing, commercial military integration, quality processing, supplier improvements, and integrated product/process development.
- (U) \$57,945 Total

<p>* FY 96 and outyear total includes funding formerly in PE 0604609F, Reliability and Maintainability Technology Insertion Program (RAMTIP). RAMTIP efforts terminated in FY 96 and all remaining funds were transferred to PRAM.</p> <p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>PRAM addresses acute reliability and maintainability (R&amp;M) deficiencies by funding prototypes of developing and mature, commercial off-the-shelf technologies that can be incorporated into existing AF weapon systems and subsystems. The objective of this program is to emphasize the rapid incorporation of R&amp;M technology "fixes" that will improve the operational capability of weapon systems and equipment at a significantly lower cost. Average project length is twenty-seven months. This program constitutes one of the most cost effective programs within the Air Force, with a proven return on investment once the initial investment is completed. Listed below are projects being pursued as program, is dependent upon MAJCOMS and field support to adapt technology once the initial investment is completed. The objective of the TMP is to strategically focus technology identified by the Air Force Materiel Command (AFMC) Technology Master Process (TMP). A periodic review for all projects is held to ascertain the opportunity for success of those currently underway and to application/insertion for the Air Force's future needs. A periodic review for all projects is held to ascertain the opportunity for success of those currently underway and to select new projects. This program in budget activity 7, Operational Systems Development, because projects are being engineered for already operational weapon systems.</p> <p>(U) FY 1995</p> <p>- (U) 3,616</p> <p>Completed work on B-1B Oxygen Analyzer, Low cost Titanium Casting, Automated Vehicle Data Acquisition, Miniature RF Blind-mated Connector, Repair Technologies for CRT High Voltage Power Supply, Electronic Board and Tester Simulation Software, Fatigue Resistant Bulkheads, Compressor Blade Monitor, Mini Zone Marker, Improved Fighter Aircraft Doors, Cooling Tower Fan Hydraulic Drive, Repair Technology For CRT Displays, Next Generations Munitions Handler, Recore of Heat Exchangers, MAJCOM Combined Paint Project. **(U) A. Mission Description and Budget Item Justification**

This program improves support of embedded computer system software, automates and standardizes weapon system support processes, establishes advanced support methodologies, provides automated tools and infrastructure environments, and improves readiness support to facilitate rapid software turnaround in response to changing mission and/or threat requirements. It conducts research and development to update Air Force digital data standards to commercial industry standards that support the Continuous Acquisition and Life-Cycle Support (CALS) concept. It funds the Air Force support equipment (SE) management objective to develop, support, distribute, and maintain products that improve Air Force SE acquisition. It supports the Air Force Automatic Test Systems (ATS) Product Master Plan and Air Force ATS Database to identify and evaluate all Air Force ATS for both long and short-term planning. This program is in budget activity 7 - Operational System Development, because projects are being engineered to support already operational weapon systems.

**(U) A. Mission Description and Budget Item Justification**

The category of research being performed in this PE is The Automatic Test Systems (ATS) Product Group Manager (PGM) Product Master Plan (PMP) and ATS Database development effort is designed to give the ATS Product Group Manager (PGM) the tools to track and plan Air Force ATS direction. The PMP will support standardization and ATS PGM long-term planning by capturing essential data on all Air Force ATS. The Database will include all ATS identified in the PMP and be used to interface with Integrated Weapon System Master Plans. The ATS Database will also include the ATS Parametric Database. It will provide ATS users and managers the capability to match new test requirements to existing test capabilities and ATS developments. The ATS Database will be made available remotely to ATS PGM customers via Ethernet Local Area Network and accessible on the World Wide Web. Additionally, A Broad Based Environment for Test (ABBET) provides support in this long term Air Force ATS planning and standardization effort. Cooperative standards development with industry to standardize ATS hardware and software interfaces used will reduce development, acquisition, and sustainment costs for ATS. It is Budget Activity 7, Operational Systems Development, because projects are being engineered to support already operational weapon systems.

(U) A. Mission Description and Budget Item Justification: Provides funding required for the SENTINEL II (SII) Integration Program which is designed to complete the software development begun under SENTINEL BRIGHT II (SBII) and to automate and integrate the commercial off-the-shelf hardware and software purchased for SBII and SENTINEL ASPEN II (SAII) systems. SBII supports cryptologic analysts and maintenance personnel; SAI supports general military intelligence analysts. SII integrates SBII and SAI with common software on like hardware providing computer aided/computer managed instruction for intelligence personnel. This program parallels the fielding of modernized operational intelligence systems and corrects long-standing deficiencies in training "mission ready" intelligence professionals.

## (U) Change Summary Explanation:

Funding: Increases in FY95 (+\$162), FY96 (+\$164), and FY97 (+\$309) for civilian injury and unemployment compensation costs are due to medical inflation increases and Consumer Price Index (CPI) increases. This information was provided by the Department of Labor (DOL) based on their analysis of FY95 Federal Employees Compensation Act (FECA) Chargeback costs. DOL administers this program and charges the Air Force for its employee's compensation costs; therefore, both programs are MUST PAY bills mandated by law (5 USC, Chapter 81). DOL bills the Air Force two years in advance for civilian injury compensation benefits, e.g. FY93 bill due in FY95. DOL bills the Air Force for unemployment compensation paid Air Force employees quarterly on costs paid by state employment offices, bills must be paid in 30 days.

**(U) A. Mission Description and Budget Item Justification**

The mission of this budget activity is to gain access to the world's best defense technologies, eliminate costly duplication of research and development efforts, accelerate availability of defense systems, and to deploy and sustain common or interoperable USAF and Allied equipment through international cooperative research and development.

The USAF is party to multiple international cooperative agreements to solve common US and Allied military scientific and technological problems and to develop materiel solutions to harmonize coalition requirements. This budget activity funds the Department of the Air Force to support, develop, process, negotiate, implement, and manage these international cooperative agreements and projects in compliance with statutory reporting provisions and exacting legal statutes, fiscal constraints, technology transfer controls, intellectual property rights, third party transfer provisions, quid-pro-quo criteria, industrial base factors, and political-military interests. Included in this budget are domestic and international technology assessment teams; specialized working groups; long-term technology project developments; support for cooperative opportunity assessments; developing, processing, and negotiating international agreements; oversight of international cooperative research and development (R&D) projects; overseas R&D liaison and coordination offices; bilateral and multilateral staff talks; and exchanges of scientist and engineers. Funds NATO Air Force Armaments Group (NAFAG), and NATO Advisory Group for Aerospace Research and Development (AGARD).

**Justification for Budget Activity Assignment**

This program element funds general R&D management for all USAF international cooperative R&D. This includes management support and execution of projects in (1) Basic Research (2) Concept Exploration (3) Demonstration and Validation (4) Engineering and Manufacturing Development and (5) Production.

**(U) FY 1995 Accomplishments:**

- (U) \$ 80 SHAPE Technical Center (STC) - Funded US R&D coordination office and administrative support to eight US professionals assigned to the STC.
- (U) \$249 Von Karman Institute (VKI) - Funded US share of the VKI budget as approved by US Mission NATO.

Funded technical experts from Air Force field-level and US industry/university-level to support 7 technical panels, 21 working groups, 4 study groups, and 1 study committee sponsored by NATO AGARD. Funded technical reports and exchanges in 12 areas as follows: (1) Limitations and Enhancement in Situational Awareness, (2) Aerodynamics of Stores Integration and Separation, (3) Loss Mechanisms and Unsteady Flow in Turbomachinery, (4) Advanced Aerostovoeelastic Testing and Data Analysis, (5) Widespread Fatigue Damage in Military Aircraft, (6) Neurological Limitations of Aircraft Operations: Human Performance Implications, (7) Progress and Challenges in Computational Fluid Dynamics Methods and Algorithms, (8) Advanced Aero-Engine Concepts and Controls, (9) Practical Implications of Thermal Mechanical Fatigue in the Performance of Military Aircraft Engines, (10) Design, Qualification, and Maintenance of Vibration-Free Landing Gear, (11) Enhancing the Survivability of Military Transport Aircraft, and (12) Use of Commercial Satellites for Military Applications. Expanded Partnership for Peace initiative through AGARD outreach program incorporating Eastern Europe and Former Soviet Union (FSU) scientific and technical groups.</p> <p><b>Air Force International Programs Support Agency (AFIPSA)</b> - Funded USAF management of International Cooperative R&amp;D Agreements. The following agreements were signed in FY95: <b>Australia:</b> (1) Aircraft and Stores Compatibility Testing; <b>Canada:</b> (1) Weapons Separation Prediction, (2) Air Breathing Propulsion T&amp;E, (3) Unmanned Aerial Vehicle, (4) Air Base Operability, (5) Digital Communications Equipment; <b>Four-Powers</b> (Germany, France, UK, and US): (1) Electro-Optic Technology Demonstration; <b>France:</b> (1) Image/Information Reformatter, (2) High Speed Tires; <b>Germany:</b> (1) Master Research and Technology Project Agreement; <b>Israel:</b> (1) Electronic Warfare, (2) Biodynamics and Human Factors Engineering; <b>Poland:</b> (1) Master Information Exchange Agreement; <b>The Netherlands:</b> (1) Unmanned Aerial Vehicles; <b>NATO:</b> (1) NATO AWACS Radar System Improvement; <b>United Kingdom:</b> (1) Master Technology Research and Development Agreement, (2) Conventional Air Launched Munitions, (3) Master Information Exchange Agreement, (4) Joint Advanced Strike Technology. In addition preliminary work for potential FY96 agreements was started.</p> <p><b>International Cooperative Research, Development and Acquisition (ICRD&amp;A)</b> - Funded Air Force Materiel Command and HQ Air Force ICRD&amp;A activities to identify, assess, and develop support packages for new Air Force international cooperative projects culminating in the approval of the above listed international agreements and processing of new candidate agreements. Funded USAF leadership initiatives as the new Chair of the NATO Air Force Armaments Group (NAFAG). Funded USAF headquarters and field-level representation at the US-Japan Systems and Technology Forum, NATO Four-Power Council, NAFAG and its 6 Subgroups to promote harmonization of requirements, standardization, and development of international cooperative R&amp;D programs. Supported engineer and scientists exchanges with 14 nations. Funded USAF overseas R&amp;D liaison offices. Funded management support and oversight of USAF Foreign Comparative Test (FCT) Program and NATO Cooperative R&amp;D Program. Partially funded deployment of the Joint STARS to promote it as part of the solution to the NATO Alliance Ground Surveillance requirement. Funded acquisition and assessment of technology from the newly independent states of the FSU.</p>

- (U) \$100  
- (U) \$575  
- (U) \$500

STC - Fully fund US R&D coordination office and administrative support to US professionals assigned to the STC.

VKI - Fund the US share of the VKI budget as approved by US Mission NATO and award two USAF VKI fellowships.

AGARD - Fully fund US national-level representation at HQ AGARD Delegates Board. Fund technical experts from Air Force field-level and US industry/university-level to support 7 technical panels, 21 working groups, 3 study groups, and 1 study committee sponsored by NATO AGARD. Fund technical reports and exchanges in 13 areas as follows: (1) Minimizing Collateral Damage During Peace Support Operations, (2) Radar Cross-Section Analysis and Imaging of Military Targets, (3) Remote Sensing, (4) Space Systems Contributions to NATO Defense Strategy, (5) Advanced Architectures for Mission Avionics, (6) Characterization and Modification of Wakes from Lifting Vehicles in Fluids, (7) Aerodynamics of Wind Tunnel Circuits and their Components, (8) Aging Combat Aircraft Fleets - Long Term Implications, (9) Smart Structures and Materials - Implications for Military Aircraft of a New Generation, (10) Medical Complications and Screening for Sustained High-G and Positive Pressure Breathing, (11) Service-Life of Solid Rocket Propellants, (12) Acute Visual and Cognitive Incapacitation of Aircrews: Protection Management and Cockpit Integration, and (13) Aircraft Fire Safety. Continue the Partnership for Peace initiative through AGARD outreach program incorporating additional Eastern Europe and Former Soviet Union scientific and technical groups.

00AH Shape Tech Center, AGARD, AFIPSA, ICRD&amp;A, AFMC Support

- (U) \$1,091	ICRD&A - Fund USAF overseas R&D liaison offices. Fund management support and oversight of USAF Foreign Comparative Test Program and NATO Cooperative R&D Program. Fund USAF participation at the NATO Four-power Council, NAFAG, and its six subgroups to promote NATO harmonization of requirements, standardization, and new cooperative R&D programs. Fund USAF participation at the US-Japan Systems and Technology Forum and cooperative opportunities with the FSX program. Fund expanded technology acquisition contacts and follow-on cooperative opportunities with Russia, Ukraine, and Eastern Europe. Partially fund technical assessments and international agreements negotiation start-up costs associated with promising cooperative R&D programs. This PE will also fund all preliminary and negotiation costs associated with USAF NATO cooperative R&D funded programs. Funds support for the NATO Board of Directors, and the Technology Booth at international forums.
- (U) \$1,090	AFMC - Fully fund Air Force Material Command activities to identify, assess, and develop support packages and project arrangements as required by statute for the above cited new candidate agreements. Fund Material Command initiatives and technical support to the Chair of the NAFAG. Support Material Command activities for engineer and scientist exchanges, USAF Foreign Comparative Test, and NATO Cooperative R&D Programs. Fund USAF participation in panel meetings of the Technical Cooperation Program, Air Standardization Coordinating Committee, Standard NATO Agreements Working Groups, and NATO Alliance Ground Surveillance Program Office. Fund exploratory visits to France, Germany, Israel, United Kingdom and other countries on new technology exchange projects. Fund the International Focal Point Officers at Centers and Laboratories to assist program officers and project engineers identify, create and staff new international cooperative agreements. This program will, in addition, fund the support, management and documentation of these ICR&D efforts.
- (U) \$3,606	Total
(U) <u>FY 1997</u>	
- (U) \$100	STC - Fund US R&D coordination office and administrative support to US professionals assigned to the STC.
- (U) \$245	ESEP - Will fund the execution and the management oversight of the Engineer and Scientist Exchange Program (ESEP).

BUDGET ACTIVITY

PE NUMBER AND TITLE

7 - Operational System Development

1001004F International Activities

PROJECT NO. AND NAME

00AH Shape Tech Center, AGARD, AFIPSA, ICRD&amp;A, AFMC Support

(U) \$1,205 AFMC - Fully fund Air Force Material Command activities to identify, assess, and develop support packages and project arrangements as required by statute for new and existing candidate agreements. Support Materiel Command activities for engineer and scientist exchanges, USAF Foreign Comparative Test, and NATO Cooperative R&D Programs. Fund USAF participation in panel meetings of the Technical Cooperation Program, Air standardization Coordinating Committee, Standard NATO Agreements Working Groups, and other NATO forums. Fund periodic bilateral meetings to define new areas of possible cooperation, then fund exploratory visits to France, Germany, Israel, United Kingdom, Canada, and other countries on new technology exchange projects. Fund the International Focal Point Officers at Centers and Laboratories to assist program officers and project engineers in identifying, creating and staffing new international cooperative agreements. Fund HQ staff to support and promote international research and development cooperation throughout AFMC. Fund small contracts in support of technology initiatives. This program will, in addition, fund the support, management and documentation of these ICR&D efforts.

(U) \$3,633 Total

(U) Acquisition Strategy:

This program element is the only source of USAF funds to pursue opportunities for international armament's cooperation to (a) deploy and support common or interoperable equipment with our allies; (b) leverage USAF resources with our allies through cost sharing and economies of scale; and (c) exploit the best US and allied technologies for equipping coalition forces. We obtain these benefits only after international cooperative opportunities are identified, explored, developed, assessed and after the international agreements are negotiated and concluded. This program element provides funds to execute up front armaments cooperation responsibilities, rationalize cooperative opportunities, assess allied technologies, and generate sound, cost-effective cooperative programs between the USAF and our international partners. Once these initiatives and programs are started as international efforts they are transferred to the appropriate technology or systems program office and are funded in their own program elements.

7 - Operational System Development		1001018F NATO JSTARS									
PROJECT NO. AND NAME		0002 NATO JSTARS									
COST (\$ In Thousands)		FY 1995 Actual	FY 1996 Estimate	FY 1997 Estimate	FY 1998 Estimate	FY 1999 Estimate	FY 2000 Estimate	FY 2001 Estimate	Cost to Complete	Total Cost	
0002	NATO JSTARS	0	4,500	0	0	0	0	0	0	0	
<p>(U) A. <u>Mission Description and Budget Item Justification</u></p> <p>This program initiates a U.S. Government effort to provide for NATO, from airborne platforms, near-real time surveillance and targeting information on moving and stationary ground targets (growth to maritime operations), slow moving rotary and fixed wing aircraft, and rotating antennas. This information would enable operational and tactical commanders to make and execute battle decisions. To meet these needs, NATO initiated the Alliance Ground Surveillance (AGS) program. The US government has recommended Joint Surveillance Target Radar System (Joint STARS) as a candidate to fulfill the AGS requirement. The Air Force and Army effort currently defines an AGS system within the NATO architecture based on JSTARS. The Air Force is lead service. A NATO AGS system based on Joint STARS will be capable of providing target information for paring direct attack aircraft and standoff weapons against selected targets. The system will be capable of being cued by other reconnaissance, surveillance, and target acquisition systems; able to respond rapidly to worldwide contingencies; and provide surveillance and attack information in all light and near-all-weather conditions. The operational utility of the system was effectively demonstrated by the outstanding performance of the two developmental aircraft in support of combat operations during Desert Storm and Bosnia. This program is in budget activity 7 - Operational System Development because the US version of the program is a fielded operational system; it is expected that the NATO AGS version of the program would utilize major elements of the US program, requiring only minor changes to meet the NATO requirement.</p> <p>(U) FY 1995 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) 1,876 System Definition for Interoperability with NATO Contingency Operations</li> <li>- (U) 74 TEMS and other support</li> <li>- (U) 1,950 Total*</li> </ul> <p>(U) FY 1996 (\$ in Thousands):</p> <ul style="list-style-type: none"> <li>- (U) 3,575 Phase II NATO Study</li> <li>- (U) 80 Embryonic Program Office</li> <li>- (U) 745 ESC/IPO Support Cost</li> <li>- (U) 100 Travel</li> <li>- (U) 4,500 Total</li> </ul>
